

Hortonworks Data Platform

HDP-2.2.0 Release Notes

(Dec 2, 2014)

Hortonworks Data Platform: HDP-2.2.0 Release Notes

Copyright © 2012-2015 Hortonworks, Inc. Some rights reserved.

The Hortonworks Data Platform, powered by Apache Hadoop, is a massively scalable and 100% open source platform for storing, processing and analyzing large volumes of data. It is designed to deal with data from many sources and formats in a very quick, easy and cost-effective manner. The Hortonworks Data Platform consists of the essential set of Apache Hadoop projects including MapReduce, Hadoop Distributed File System (HDFS), HCatalog, Pig, Hive, HBase, Zookeeper and Ambari. Hortonworks is the major contributor of code and patches to many of these projects. These projects have been integrated and tested as part of the Hortonworks Data Platform release process and installation and configuration tools have also been included.

Unlike other providers of platforms built using Apache Hadoop, Hortonworks contributes 100% of our code back to the Apache Software Foundation. The Hortonworks Data Platform is Apache-licensed and completely open source. We sell only expert technical support, [training](#) and partner-enablement services. All of our technology is, and will remain free and open source.

Please visit the [Hortonworks Data Platform](#) page for more information on Hortonworks technology. For more information on Hortonworks services, please visit either the [Support](#) or [Training](#) page. Feel free to [Contact Us](#) directly to discuss your specific needs.

1.8.3. Hadoop Common/HDFS Known Issues	54
1.8.4. HBase Known Issues	55
1.8.5. HDFS Known Issues	56
1.8.6. Hive Known Issues	56
1.8.7. Kafka Known Issues	58
1.8.8. Knox Known Issues	58
1.8.9. Oozie Known Issues	58
1.8.10. Phoenix Known Issues	59
1.8.11. Pig Known Issues	59
1.8.12. Ranger (formerly XA Secure) Known Issues	59
1.8.13. Sqoop Known Issues	59
1.8.14. Ubuntu Known Issues	60
1.8.15. YARN Known Issues	60
1.8.16. ZooKeeper Known Issues	61

1. HDP 2.2.0 Release Notes

This document provides you with the latest information about the HDP 2.2.0 release and its product documentation.

Component Versions

All HDP 2.2 components listed here are official Apache releases of the most recent stable versions available. Hortonworks' philosophy is to provide patches only when absolutely necessary to assure the interoperability of the components. Unless you are explicitly directed by Hortonworks Support to take a patch update, each of the HDP 2.2 components needs to remain at the following package version levels to ensure a certified and supported copy of HDP 2.2.

Official Apache versions for HDP 2.2.0.

- Apache Hadoop 2.6.0
- Apache Accumulo 1.6.1
- Apache Ranger 0.4.0
- Apache DataFu 1.2.0
- Apache Falcon 0.6.0
- Apache Flume 1.5.2
- Apache HBase 0.98.4
- Apache Hive 0.14.0
- Hue 2.6.1
- Apache Kafka 0.8.1.1
- Apache Knox 0.5.0
- Apache Mahout 0.9.0
- Apache Oozie 4.1.0
- Apache Pig 0.14.0
- Apache Phoenix 4.2.0
- Apache Sqoop 1.4.5
- Apache Slider 0.60.0
- Apache Tez 0.5.2
- Apache Storm 0.9.3

- Apache Zookeeper 3.4.6

As of HDP 2.2 the following third-party tools are deprecated and will be removed in a future release:

- Ganglia 3.5.0
- Nagios 3.5.0
- Ganglia Web 3.5.7

1.1. Unsupported Apache Features

This section highlights several new features in HDP 2.2.0.

- In HDP 2.2.0, Spark 1.4.1 is now available as a certified component.
 - Support for Optimized Row Columnar (ORC) files
 - ML Pipeline API in PySpark ([SPARK-3530](#))
- Support for Ubuntu 12.0.4 and Ubuntu 14.0.4
- Support for Debian 6 and Debian 7

1.2. Unsupported Features

The following features are shipped as part of HDP 2.2 HDFS, but are not supported:

- NameNode Federation ([HDFS-1052](#))
- viewFS ([HADOOP-7257](#))

The following Apache Components are shipped as part of HDP 2.2 YARN, but are not supported:

- Fair Scheduler
- MapReduce Uber AM
- MapReduce Eclipse Plug-in

The following Apache Component is shipped as part of HDP 2.2 Kafka, but is not supported:

- Delete Topic

1.3. Behavioral Changes

Behavioral changes denote a marked change in the code from the previously released version to this version of HDP 2.2. Review all behavioral changes for a component to ensure that you are aware of how components have changed in this release.

1.3.1. HDFS Behavioral Changes

[HDFS-6376](#) distcp can copy data between HA clusters. You can use the new configuration property dfs.internal.nameservices to explicitly specify the name services belonging to the local cluster, while continue using the configuration property dfs.nameservices to specify all the name services in the local and remote clusters.

For example, if you perform distcp between two clusters, for example c1 and c2 and both of which run in the HA mode, make the following configuration changes on the cluster that runs the distcp job:

1. Set dfs.nameservices to both c1 and c2.
2. Modify the configuration to include the settings for both clusters. See the comments in [HDFS-6376](#) for more details.
3. Set dfs.internal.nameservice to the nameservice id that corresponds to the cluster that runs the distcp job.

1.3.2. Hive Behavioral Changes

[HIVE-7397](#) Hive has changed the following default settings:

```
hive.fetch.task.conversion - from 'minimal' to 'more'  
hive.fetch.task.conversion.threshold - from '-1' to '1073741824' (1 GiB)
```

For example, queries such as:

```
select * from foo_table limit 1;
```

which would previously have executed without a MapReduce stage to now require a MapReduce stage. The change to these settings allows more types of queries to be evaluated locally, including queries with "where" clauses. The threshold is applied to the input size of the query (raw table size). Because 'more' allows filtered queries, it's prudent to set a limit on the input size.

[HIVE-6432](#): Hive 0.14 removes all org.apache.hcatalog.* classes in favor of org.apache.hive.hcatalog.* classes.

The following previously deprecated features were also removed in this release as part of this change:

- HdfsAuthorizationProvider - the Hive StorageBasedAuthorizationProvider replaces it.
- HBaseHCatStorageHandler - Hive's native HBaseStorageHandler is now directly usable from HCatalog.

[HIVE-6455](#) If you store Hive data in a columnar format, such as ORC, verify that the hive.optimize.sort.dynamic.partition property is set to true. It was the default value for Hive 0.13.x, but is now disabled by default in Hive 0.14.x. Enabling dynamic partitions improves Hive performance when using columnar formats.

```
<property>  
  <name>hive.optimize.sort.dynamic.partition</name>  
  <value>true</value>  
</property>
```

([HIVE-5940](#), [HIVE-6252](#)) Added SHOW GRANT and SHOW ROLE GRANT. Users will be able to list only their own privileges on a table/role unless they are in an admin role. For grant/revoke statements, if a user is granted a privilege WITH GRANT OPTION on a table or view, then the user can also grant that privilege other users.

[HIVE-6972](#) The JDBC URI for HiveServer2 has the form:

```
jdbc:hive2://<host1>:<port1>,<host2>:<port2>/dbName;sess_var_list?  
hive_conf_list#hive_var_list
```

Ideally, sess_var_list is supposed to be used to pass parameters that will be used within the JDBC Driver. However, some of the http mode parameters were being passed in the hive_conf_list which is fixed now (in a backward-compatible way).

Additionally, JDBC Driver has a naming convention for the parameters in the JDBC URI which were not followed to the sasl.qop parameter. It is renamed it in a backward compatible way.

- HTTP Mode parameters have changed. As you can see in the following examples, hive.server2.transport.mode has been renamed to transportMode, hive.server2.thrift.http.path has been renamed to httpPath and both have been moved from hive_conf_list to sess_var_list.
- Old example URI: jdbc:hive2://<host>:<port>/<db>;user=<username>;password=<password>?
hive.server2.transport.mode=http;hive.server2.thrift.http.path=<http_endpoi...
n>
- New example URI: jdbc:hive2://<host>:<port>/<db>;user=<username>;password=<password>;transportMode=http;httpPath=<http_...
hive.server2.logging.operation.enabled=false
- Sasl qop renamed to saslQop:
 - Old example URI: jdbc:hive2://<host>:<port>/<db>;principal=<hiveserver2_kerberos_principal>;sasl.qop=<qop_value>
 - New example URI: jdbc:hive2://<host>:<port>/<db>;principal=<hiveserver2_kerberos_principal>;saslQop=<qop_value>

All changes are backward-compatible and print a deprecation warning message like the following:

```
0: jdbc:hive2://localhost:10007> !connect  
jdbc:hive2://localhost:10007/;sasl.qop=auth?hive.server2.transport.mode=h  
tp;hive.server2.thrift.http.path=cliservice user user  
org.apache.hive.jdbc.HiveDriver  
Connecting to  
jdbc:hive2://localhost:10007/;sasl.qop=auth?hive.server2.transport.mode=h  
tp;hive.server2.thrift.http.path=cliservice
```

```
14/10/07 16:22:24 INFO jdbc_Utils: Supplied authorities: localhost:10007
14/10/07 16:22:24 WARN jdbc_Utils: ***** JDBC param deprecation *****
14/10/07 16:22:24 WARN jdbc_Utils: The use of sasl.qop is deprecated.
14/10/07 16:22:24 WARN jdbc_Utils: Please use saslQop like so:
jdbc:hive2://<host>:<port>/dbName;saslQop=<qop_value>
14/10/07 16:22:24 WARN jdbc_Utils: ***** JDBC param deprecation *****
14/10/07 16:22:24 WARN jdbc_Utils: The use of hive.server2.transport.mode
is deprecated.
14/10/07 16:22:24 WARN jdbc_Utils: Please use transportMode like so:
jdbc:hive2://<host>:<port>/dbName;transportMode=<transport_mode_value>
14/10/07 16:22:24 WARN jdbc_Utils: ***** JDBC param deprecation *****
14/10/07 16:22:24 WARN jdbc_Utils: The use of
hive.server2.thrift.http.path is deprecated.
14/10/07 16:22:24 WARN jdbc_Utils: Please use httpPath like so:
jdbc:hive2://<host>:<port>/dbName;httpPath=<http_path_value>
Connected to: Apache Hive (version 0.14.0-SNAPSHOT)
Driver: Hive JDBC (version 0.14.0-SNAPSHOT)
Transaction isolation: TRANSACTION_REPEATABLE_READ
```

Be aware that org.apache.hcatalog.pig.HCatLoader was deprecated in Hive 0.13.x and removed in Hive 0.14.x. You must now use org.apache.hive.hcatalog.pig.HCatLoader.

1.3.3. Hue Behavioral Changes

The Hue Hive App, also known as Beeswax, no longer uses the Beeswax server. The Hue Hive App now integrates directly with HiveServer2.

1.3.4. Oozie Behavioral Changes

The Oozie system environment must have JDK 1.6 or higher. And on the machine where you run oozie command line, set \$JAVA_HOME to a java version of 1.6 or higher.

Calling log4j has changed in Oozie for HDP 2.2. If you are using custom configurations or Ambari to install, add the following line to oozie-log4j.properties:

```
log4j.appenders.oozie.layout.ConversionPattern=%d{ISO8601} %5p %c{1}:%L -
 SERVER[$oozie.instance.id] %m%n
```

where \${oozie.instance.id} is determined by oozie, automatically.

1.3.5. Pig Behavioral Changes

Be aware that `org.apache.hcatalog.pig.HCatLoader` was deprecated in Hive 0.13.x and removed in Hive 0.14.x. You must now use `org.apache.hive.hcatalog.pig.HCatLoader`.

1.4. Tech Previews in This Release

All HDP 2.2 components listed here are official Apache releases of the most recent stable versions available. Hortonworks' philosophy is to provide patches only when absolutely necessary to assure the interoperability of the components. Unless you are explicitly directed by Hortonworks Support to take a patch update, each of the HDP 2.2 components needs to remain at the following package version levels to ensure a certified and supported copy of HDP 2.2.

- HDFS Encryption
- HDFS read/write storage tier
- [HDFS-6932](#) HDFS Blocking Mover/Balancer from moving files/blocks to/from transient storage.
- Falcon Data Lineage
- Falcon Graph View of Dependencies
- Phoenix support for local secondary indexes
- Spark 1.2.0 on YARN
- YARN support for Docker

1.5. What's New in this Release

HDP 2.2 includes the following new features:

- Accumulo
 - Accumulo multi-datacenter replication
 - Accumulo on YARN via Slider
- Falcon
 - Authorization
 - Lineage Enhancement
 - HCat Replication / Retention
 - Archive to Cloud
- Flume
 - Flume streaming to Hive for secure and unsecure clusters

- HBase
 - HBase HA: Timeline-consistent replicas with realtime replication
 - HBase block cache compression
 - HBase on YARN via Slider
- HDFS
 - Heterogenous Storage: Support for SSD Tier
 - Heterogenous Storage: Support for Archival Tier
 - Operating secure DataNode without requiring root access
 - AES support for faster wire encryption
- Hive
 - Support for SQL Transactions with ACID semantics
 - Support for SQL Temporary Tables
 - Better optimize queries using Cost Based Optimizer
 - Add performance improvements for various queries
 - Security additions such as Grant, Revoke with a choice of using Native Security or Ranger security with both integrated completely in Hive
- Knox
 - Support for HDFS HA
 - Installation and configuration with Apache Ambari
 - Service-level authorization with Apache Ranger
 - YARN REST API access
- Oozie
 - Oozie HA on secure clusters
- Phoenix
 - Subquery support
 - Robust secondary indexes
 - Build secondary index during bulk import
- Pig
 - Pig on Tez

- Including DataFu for use with Pig
- Ranger
 - Storm Authorization and Auditing
 - Knox Authorization and Auditing
- Deeper integration with HDP stack: Hive Auth API support for grant/revoke commands, grant/revoke commands in HBase, and Windows support
- REST API's for policy manager, local audit log storage in HDFS, and support for Oracle DB for policy store and audits
- Sqoop
 - Support for all Hive types via HCatalog import/export
 - Support for multiple partition keys
 - Integration with Hadoop Credential Management Framework
- Storm
 - Storm clusters can now be provisioned via Ambari
 - Storm can now run on YARN based clusters using Apache Slider
 - Storm now supports kerberos based authentication and pluggable authorization
 - Pre-built Spouts for JMS, HBase lookups and Bolts for Kafka, Hive.
 - Real-time visualization of running topologies and its associated metrics
 - REST APIs for topology stats
- Tez
 - Tez Debug Tooling & UI
- YARN
 - Support long running services: handling of logs, containers not killed when AM dies, secure token renewal, YARN Labels for tagging nodes for specific workloads
 - Support for CPU Scheduling and CPU Resource Isolation through CGroups
 - Work-preserving restarts of ResourceManager and NodeManager
 - Support node labels during scheduling
 - Global, shared cache for application artifacts
 - REST API for YARN application submission and termination

- Application Timeline Server is supported in a Secure (Kerberized) cluster

1.6. Fixed Issues

Fixed issues represents selected issues that were previously logged via Hortonworks Support, but are now addressed in the current release. These issues may have been reported in previous versions within the Known Issues section; meaning they were reported by customers or identified by Hortonworks Quality Engineering team.

Key	Apache JIRA	Summary
BUG-10529	HIVE-4627	Add support for total ordering of output
BUG-10941	TEZ-645 TEZ-646 TEZ-776	GRIDMIX000000 got final Status KILLED with container reuse disabled - AM OOM
BUG-11102	YARN-1445	[YARN-1445] Separate FINISHING and FINISHED state in YarnApplicationState
BUG-12327	YARN-90	[Yarn-90] NM cannot detect when bad disks become healthy again.
BUG-12398	HBASE-10817 HBASE-10818	Create bulkload integration Test with replica option
BUG-12650	FALCON-303	Falcon API changes required for Mirroring UI
BUG-12699	HDFS-573	libHDFS native library for Windows
BUG-13215	HBASE-9445	HBase Snapshot Input Format IT Cannot Run with Default Number of Regions
BUG-14013	HIVE-6507	hcatalog should automatically work with new tableproperties in ORC
BUG-14645	HDFS-6678	MiniDFSCluster leaves CacheReplicationMonitor thread running causing heap thrashing and eventual failure of Oozie unittests
BUG-14846	FLUME-1734	Hive Sink Unit test needs a way to interact with Hive and check streamed data
BUG-14969	HIVE-6549	remove hcatalog/bin/hive-config.sh
BUG-15077	PHOENIX-1072	sqlline.py: On failed connection, continues to run in the background
BUG-15109	HDFS-2882 HDFS-4211	HDFS-2882: Receiving NPE Errors when starting datanode due to a mount not being accessible
BUG-15413	TEZ-1027	Recovery Information does not get stored at tez.staging-dir with session on
BUG-15466	HBASE-10785	HBase Bloomberg HA Replica Integration Test get/mutli-get fails
BUG-15613	YARN-1885	[YARN-1885] yarn logs command did not provide logs for all containers across all attempts
BUG-15733	HIVE-7071	Schema evolution is broken on Tez

Key	Apache JIRA	Summary
BUG-15796	HADOOP-10522 HADOOP-10527	sigsegv in mapred history server due to segfault in JniBasedUnixGroupsMapping
BUG-15881	HIVE-7579	Error messaging for different authorization failures is not informative
BUG-15988	PIG-3989	Need a way to pass PIG_OPTS to Hadoop for all Hadoop versions
BUG-16257	HBASE-10123	Hbase master fails to start due to BindException
BUG-16279	HIVE-8203	Valid transaction list acquired before locks in Driver.java
BUG-16281	HIVE-8258	Cleaner needs to track readers reading its files rather than acquire a lock
BUG-16293	HADOOP-10472	KerberosAuthenticator writes security logs on the client
BUG-16512	TEZ-1033	[TEZ-1033] AM hangs during recovery with Awaiting init event
BUG-16566	YARN-2016	Yarn getApplicationRequest start time range is not honored
BUG-16596	HIVE-6626	Hive does not expand the DOWNLOADED_RESOURCES_DIR path
BUG-16609	TEZ-1044	Need to consider map/reduce java.opts values for container reuse
BUG-16650	MAPREDUCE-5831	[MAPREDUCE-5831] Old MR client is not compatible with new MR application
BUG-16795	HADOOP-10503	update junit dependency for all components to 4.11
BUG-16829	YARN-1976	[YARN-1976] Tracking url missing http protocol for FAILED application
BUG-16862	YARN-1922	Process group remains alive after container process is killed externally
BUG-16908	YARN-920	YARN RM shows one running app but a node shows its running more than one
BUG-16913	HDFS-6715	[HDFS-6715] webhdfs wont fail over when it gets java.io.IOException: Namenode is in startup mode
BUG-16918	HIVE-7342	SQL std auth - should be possible to configure it using hive configuration files alone
BUG-16985	HADOOP-10508	EBay Code Review - Please review and commit HADOOP-10508
BUG-17034	YARN-1250	[YARN-1250] Add ACLs manager of the generic history
BUG-17105	YARN-2269	External links needs to be removed from YARN UI
BUG-17231	HIVE-7250	Problems loading wide tables into ORC
BUG-17238	FALCON-229	Enable SSL for Falcon REST API
BUG-17307	HIVE-7533	support SQL std authz from hive cli
BUG-17521	HIVE-7052	Optimizing tez split calculation time

Key	Apache JIRA	Summary
BUG-17533	FALCON-434	champlain CI: falcon doesn't compile with hive trunk
BUG-17710	HBASE-11149	Wire encryption is broken
BUG-17787	TEZ-1240	Tracking jira for Tez diagnostic message improvement.
BUG-17871	TEZ-1032 TEZ-1205	allow specifying tasks/vertices to be profiled
BUG-17884	YARN-1104	[YARN-1104] NM to support rolling logs of stdout & stderr
BUG-17902	PIG-3949	Pig compilation Failure - Champlain
BUG-17939	TEZ-1024 TEZ-1470	Hive on tez job failed as it never finished
BUG-18018	YARN-1338	[YARN-1338] [Review] Recover localized resource cache state upon nodemanager restart
BUG-18138	AMBARI-7098	ipc.server.tcpnodelay should be enabled by default
BUG-18146	TEZ-657	Tez should not consider tasks running in pre-empted containers to have failed
BUG-18256	HADOOP-9888	Apache HADOOP-9888 KerberosName static initialization gets default realm, which causes big slow-down in non-secure deployment.
BUG-18257	HDFS-6455	NFS: Exception should be added in NFS log for invalid separator in allowed.hosts (HDFS-6455)
BUG-18437	TEZ-1160	[TEZ-1160] Allow users to set non-tez configs on client side
BUG-18662	YARN-1339	[YARN-1339] Code review for recovering DeletionService state in NodeManager Restart
BUG-18704	HDFS-6581	Support memory as storage tier
BUG-18711	HDFS-2856	HDFS DataNode must not require to be started as ROOT (HDFS-2856)
BUG-18714	AMBARI-7126 AMBARI-7615	Ambari support for DataNode no longer running as root.
BUG-18849	MAHOUT-1589 MAHOUT-1590	champlain mahout auto merge is broken
BUG-18923	TEZ-1387	BUG-17787 Insufficient diagnostics/ error messages when jobs fail on a badly setup cluster
BUG-18933	HIVE-7219	upload/checkin unrolling code
BUG-18934	HIVE-7231	fix stripe padding (64M - 256M blocks)
BUG-19015	FALCON-482	Concurrently update/delete a process fails in falcon
BUG-19019	YARN-2167	[YARN-2167] LeveldbIterator should get closed in NMLeveldbStateStoreService#loadLocalizationState() within finally block

Key	Apache JIRA	Summary
BUG-19033	HIVE-7324	Unit test framework addition to allow import of metadata/explain only queries
BUG-19109	PIG-4019	champlain pig compile is broken -
BUG-19111	YARN-2173	[YARN-2173] Enabling HTTPS for the reader REST APIs of TimelineServer
BUG-19112	YARN-2174	[YARN-2174] Enabling HTTPS for the writer REST API of TimelineServer
BUG-19113	YARN-2102	[YARN-2102] More generalized timeline ACLs
BUG-19114	MAPREDUCE-5858	[MAPREDUCE-5858] MR should make use of the timeline server
BUG-19116	MAPREDUCE-5933	BUG-17687 [Review] [MAPREDUCE-5933] Enable MR AM to post history events to the timeline server
BUG-19235	YARN-611	[YARN-611] Add an AM retry count reset window to YARN RM
BUG-19268	HDFS-6689	NFS: can't access file under directory with 711 access right as other user
BUG-19284	TEZ-1223	At large scale (10 TB), shuffle throws errors "Encoded byte size for String was -30, which is outside of 0..1000 range."
BUG-19324	TEZ-1080	Configuration for Intermediate Inputs and Outputs
BUG-19326	TEZ-1209	Add Javadoc for Tez APIs
BUG-19328	TEZ-857	Separate user facing and framework facing interfaces on Tez runtime
BUG-19417	PIG-4218	Pig OrcStorage fail to load a map with null key
BUG-19428	YARN-614	[YARN-614] Retry attempts automatically for hardware failures or YARN issues and set default app retries to 1
BUG-19496	YARN-2208	BUG-17882 [YARN-2208] AMRMTokenManager need to have a way to roll over AMRMToken
BUG-19607	YARN-2228	[YARN-2228] TimelineServer should load pseudo authentication filter when authentication = simple
BUG-19645	YARN-2247	[YARN-2247] Add support for authentication for RM web services using delegation tokens
BUG-19731	YARN-2211	BUG-17882 [YARN-2211] RMStateStore needs to save AMRMToken master key for recovery when RM restart/failover happens
BUG-19732	YARN-2212	BUG-17882 [YARN-2212] ApplicationMaster needs to find a way to update the AMRMToken periodically
BUG-19733	YARN-2237	BUG-17882 [YARN-2237] MRAppMaster changes for AMRMToken roll-up
BUG-19880	TEZ-1238	Display more clear diagnostics info on client side if missing jar in

RMP-2113	SLIDER-181	Requirements to run "Storm on YARN" via Slider
RMP-2114	SLIDER-182	Requirements to run "Accumulo on YARN" via Slider
RMP-2115	SLIDER-180	Requirements to run "HBase on YARN" via Slider
RMP-2116	YARN-913	Add a registry for services in a YARN cluster
RMP-2117	SLIDER-183	Long lived service support in Slider
RMP-2118	SLIDER-69	Failure resiliency
RMP-2260	YARN-2257	(2.1) - [YARN-2411] Support Capacity Scheduler server side mapping of user to a default queue

1.7. Apache Patch Information

The following sections list patches in each HDP 2.2.0 component beyond what was fixed in the base version of the Apache component.

1.7.1. Accumulo 1.6.1

- [ACCUMULO-2386](#) Update release guide to include specific CHANGES generation
- [ACCUMULO-2571](#) Define replication state machines for data
- [ACCUMULO-2572](#) Define ReplicaSystem interface
- [ACCUMULO-2573](#) Define Thrift IDL for data transfer
- [ACCUMULO-2574](#) Define storage data structure for data that needs replication
- [ACCUMULO-2575](#) Update GC to not remove files before replication has happened
- [ACCUMULO-2579](#) Modify "live ingest" code path to create replication entries
- [ACCUMULO-2581](#) Create service in Master to assign replication work
- [ACCUMULO-2582](#) Create insight to replication in the Monitor
- [ACCUMULO-2583](#) Create services that handles replication "receives"
- [ACCUMULO-2587](#) Provide authentication criteria between a master and slave
- [ACCUMULO-2650](#) Property additions for configuration of replication
- [ACCUMULO-2684](#) Cannot easily print long Key
- [ACCUMULO-2705](#) Don't try to assign permissions to !SYSTEM user when creating a table
- [ACCUMULO-2709](#) Create service in Master to manage replication records
- [ACCUMULO-2799](#) Create ReplicationOperations
- [ACCUMULO-2808](#) Update to Jetty 9
- [ACCUMULO-2819](#) Provide WorkAssigner which is order-aware
- [ACCUMULO-2829](#) tool.sh doesn't include new mapreduce jar in libjars
- [ACCUMULO-2830](#) Example configurations/templates reference incorrect class name for Shell audit log
- [ACCUMULO-2833](#) Create and configure a shell formatter for Status messages
- [ACCUMULO-2834](#) Immediately re-queue files which have more data to replicate
- [ACCUMULO-2835](#) Track explicit lengths of WALS for more accurate reporting
- [ACCUMULO-2846](#) Need to re-use DataInputStream for reading files that need replication
- [ACCUMULO-2847](#) Update user documentation ACCUMULO-2858 Inadvertently always falling back on sync
- [ACCUMULO-2858](#) Inadvertently always falling back on sync

- [ACCUMULO-2901](#) Document practical use-cases for replication
- [ACCUMULO-2910](#) Ineffective null check for replicationSources in Mutation#write()
- [ACCUMULO-2912](#) java.lang.NoClassDefFoundError: com/google/protobuf/GeneratedMessage
- [ACCUMULO-2913](#) Continue stabilization of replication UTs/ITs
- [ACCUMULO-2914](#) Move ReplicationTest into an IT
- [ACCUMULO-2918](#) TServers expect zookeeper to have parent nodes created
- [ACCUMULO-2923](#) Replication configuration expected numeric only table IDs
- [ACCUMULO-2925](#) Timestamp is not propagated to peer
- [ACCUMULO-2939](#) Missing protobuf dependency in tarball
- [ACCUMULO-2963](#) ReplicationDriver daemon dies from RTE thrown out of BatchScanner
- [ACCUMULO-2964](#) Unexpected ThriftSecurityException from BatchScanner
- [ACCUMULO-2973](#) ShellServerIT\#namespaces is timing out
- [ACCUMULO-2997](#) Race condition in resizing of TServer client pool
- [ACCUMULO-3028](#) Extraneous trace logging
- [ACCUMULO-3040](#) Create JMX endpoint for replication status
- [ACCUMULO-3071](#) Add replication service ports to user manual
- [ACCUMULO-3077](#) File never picked up for replication
- [ACCUMULO-3111](#) Race condition in MetaSplitIT
- [ACCUMULO-3130](#) Some replication ITs fail with SSL enabled
- [ACCUMULO-3131](#) CyclicReplicationIT doesn't adhere to useSslForIT option <
- [ACCUMULO-3132](#) Fate uses java serialization which is error-prone between upgrades
- [ACCUMULO-3160](#) ExamplesIT usage of MAC is sub-par
- [ACCUMULO-3175](#) More IT stabilizations
- [ACCUMULO-3194](#) BulkSplitOptimizationIT failed with 5 files associated with tablet instead of 1-4 files
- [ACCUMULO-3212](#) Configuration objects created with CredentialProvider load defaults unnecessarily
- [ACCUMULO-3213](#) EOFException on metadata tablet during DeleteTableDuringSplitIT
- [ACCUMULO-3214](#) NPE checking if replication is enabled during tablet assignment

- [ACCUMULO-3215](#) Import tries to use default DFS directory instead of configured
- [ACCUMULO-3217](#) KeyValue doesn't implement equals or hashCode
- [ACCUMULO-3218](#) ZooKeeperInstance only uses first ZooKeeper in list of quorum
- [ACCUMULO-3220](#) Division by zero if encryption cipher isn't a block cipher
- [ACCUMULO-3221](#) Unintentional integer overflow in Shell authorization timeout
- [ACCUMULO-3223](#) DefaultLoadBalancer allows a NPE just to catch it
- [ACCUMULO-3225](#) Dead code in ConfigCommand
- [ACCUMULO-3226](#) Unnecessary null check in Authorizations constructor
- [ACCUMULO-3228](#) fix potential resource leaks
- [ACCUMULO-3233](#) Random port for ZK in MiniAccumulo might not be unique
- [ACCUMULO-3242](#) Consolidate ZK code WRT retries
- [ACCUMULO-3243](#) Ensure all ITs have some timeout
- [ACCUMULO-3247](#) ZooKeeperInstance could use a toString
- [ACCUMULO-3249](#) New replication status message created for file that was already replicated
- [ACCUMULO-3257](#) Make Randomwalk respect timeout (maxSec) more reliably
- [ACCUMULO-3258](#) Warning about synconclose is way too spammy
- [ACCUMULO-3259](#) Randomwalk Bulk.xml create queued threads without bound.
- [ACCUMULO-3261](#) Image Randomwalk fails if no rows are found
- [ACCUMULO-3264](#) AuditMessageIT broken
- [ACCUMULO-3271](#) Add splits to tables in MultiTable randomwalk module
- [ACCUMULO-3275](#) "not balancing because of unhosted tablets" message should include number of unhosted tablets
- [ACCUMULO-3276](#) Shard.xml hung with no client output
- [ACCUMULO-3279](#) BackupMasterIT failed with BadVersion ZK Exception
- [ACCUMULO-3286](#) ConditionalWriterIT.testTrace failed
- [ACCUMULO-3287](#) CyclicReplicationIT failed because it couldn't start ZK
- [ACCUMULO-3290](#) ShellServerIT#listscans fails if scan shows up a QUEUED
- [ACCUMULO-3292](#) ConditionalWriterIT#testOffline failed

- [ACCUMULO-3296](#) ZooUtil.recursiveDelete looping indefinitely
- [ACCUMULO-3301](#) TableOperationsImpl.waitForTableStateTransition(String,TableState) never fetches `future` column
- [ACCUMULO-3305](#) MiniAccumuloClusterImpl#killProcess should use the stopWithTimeout method
- [ACCUMULO-3316](#) Update TLS usage to mitigate POODLE
- [ACCUMULO-3317](#) Change Jetty configuration to disallow SSLv3
- [ACCUMULO-3318](#) Alter Thrift RPC components to disallow SSLv3
- [ACCUMULO-3320](#) Replication reference prematurely closed and removed.
- [ACCUMULO-3338](#) Update example classpath configuration
- [ACCUMULO-378](#) Multi data center replication

1.7.2. DataFu 1.2.0

- [DATAFU-58](#) Unit tests against Hadoop 2
- [DATAFU-59](#) Fix unit tests under Window

1.7.3. Falcon 0.6.0

- [FALCON-403](#) Add support for Falcon to run on Windows
- [FALCON-434](#) Migrate HCatalog APIs to new namespace
- [FALCON-417](#) Upgrade Hive and HCatalog to latest stable version
- [FALCON-896](#) Upgrade Oozie to 4.1.0 and make it the default for Falcon

1.7.4. Flume 1.5.2

- [FLUME-1734](#) Create a Hive Sink based on the new Hive Streaming support
- [FLUME-1334](#) Flume startup script for Windows
- [FLUME-2442](#) Need an alternative to providing clear text passwords in flume config
- [FLUME-2224](#) Disable File channel dual checkpointing on Windows
- [FLUME-2467](#) Disable Morphline Sink and Kite Dataset sinks on Windows Builds
- [FLUME-2226](#) Refactor BlobHandler out of morphline sink and into HTTP source
- [FLUME-2227](#) Move BlobDeserializer from Morphline Sink to flume-ng-core
- [FLUME-2337](#) Export JAVA_HOME in flume-env.sh.template and increase heap size

- [FLUME-2511](#) Allow configuration of enabled protocols in Avro source and Rpc client
- [FLUME-2451](#) HDFS Sink Cannot Reconnect After NameNode Restart
- [FLUME-2068](#) File Channel issue - recovering from BadCheckpoint exception on Windows
- [FLUME-2224](#) Disable File channel dual checkpointing on Windows
- [FLUME-2407](#) Spillable Channel sometimes fails on reconfigure
- [FLUME-2145](#) TestCheckpointRebuilder.testFastReplay fails on Windows
- [FLUME-2218](#) TestFileChannelIntegrityTool tests failing on Windows
- [FLUME-2219](#) Windows: Flume tests need to know location of Hadoop native libraries (hadoop.dll)
- [FLUME-2137](#) Fix StagedInstall.java to invoke the correct startup script on Windows
- [FLUME-2058](#) TestFlumeEventQueue in FileChannel fails on Windows
- [FLUME-2136](#) Fix intermittent test failure in TestMonitoredCounterGroup on Windows
- [FLUME-2150](#) Fix TestFileChannelEncryption failure on Windows
- [FLUME-2358](#) File Channel needs to close BackingStore & EventQueue before deleting files in checkpoint directory
- [FLUME-2359](#) TestFileChannelIntegrityTool throws exception on class teardown on Windows
- [FLUME-2402](#) Warning seen when overflow is disabled for Spillable Channel
- [FLUME-2412](#) Improve Logging in Spillable Channel
- [FLUME-2122](#) Minor cleanups of User guide
- [FLUME-2175](#) Update Developer Guide with notes on how to upgrade Protocol Buffer version
- [FLUME-2123](#) Morphline Solr sink missing short type name
- [FLUME-2162](#) TestHDFSEventSinkOnMiniCluster.maxUnderReplicationTest fails on hadoop2
- [FLUME-2146](#) Windows: Tmp file creation in TestBodyTextEventSerializer.java needs fixing
- [FLUME-2151](#) Windows: Update TestExecSource to use native commands on Windows
- [FLUME-2501](#) Updating HttpClient lib version to ensure compat with Solr
- [FLUME-2508](#) LineDeserializer causes incorrect behavior in SpoolDir Source on Windows
- [FLUME-2530](#) Resource leaks found by Coverity tool
- [FLUME-2532](#) Windows : TestReliableSpoolingFileEventReader - need to close filereader

- [FLUME-2534](#) Windows : Windows : TestFlumeEventQueue has many failures
- [FLUME-2541](#) Bug in TestBucketWriter.testSequenceFileCloseRetries
- [FLUME-2441](#) Unit test TestHTTPSource.java failed with IBM JDK 1.7
- [FLUME-2520](#) HTTP Source should be able to block a prefixed set of protocols.
- [FLUME-2533](#) HTTPS tests fail on Java 6
- [FLUME-2544](#) Windows: Incorrect Path Separator used in HDFS path (HDFS Sink)

1.7.5. Hadoop Common/HDFS 2.6.0

- [HADOOP-10840](#) Fix OutOfMemoryError caused by metrics system in Azure File
- [HADOOP-10839](#) Add unregisterSource() to MetricsSystem API.
- [HDFS-7153](#) Add storagePolicy to NN edit log during file creation.
- [HDFS-7093](#) Add config key to restrict setStoragePolicy.
- [HDFS-6581](#) Support for writing to single replica in RAM. Applied HDFS-6581.merge.15.patch to C4hamplain. This is a consolidated patch containing all feature changes and was applied to trunk
- [YARN-2254](#) TestRMWebServicesAppsModification should run against both
- [YARN-1979](#) TestDirectoryCollection fails when the umask is unusual.

1.7.6. HBase 0.98.4

- [HBASE-12478](#) HBASE-10141 and MIN VERSIONS are not compatible
- [HBASE-12445](#) hbase is removing all remaining cells immediately after the cell marked with marker = KeyValue.Type.DeleteColumn via PUT
- [HBASE-12432](#) RpcRetryingCaller should log after fixed number of retries like AsyncProcess
- [HBASE-12449](#) Use the max timestamp of current or old cell's timestamp in HRegion.append()
- [HBASE-12416](#) RegionServerCallable should report what host it was communicating with
- [HBASE-10844](#) Coprocessor failure during batchmutation leaves the memstore datastructs in an inconsistent state
- [HBASE-12548](#) Improve debuggability of IntegrationTestTimeBoundedRequestsWithRegionReplicas
- [HBASE-12407](#) HConnectionKey doesn't contain CUSTOM_CONTROLLER_CONF_KEY in CONNECTION_PROPERTIES

- [HBASE-12402](#) ZKPermissionWatcher race condition in refreshing the cache leaving stale ACLs and causing AccessDenied
- [HBASE-11972](#) The "doAs user" used in the update to hbase:acl table RPC is incorrect
- [HBASE-12549](#) Fix TestAssignmentManagerOnCluster#testAssignRacingWithSSH() flaky test
- [HBASE-12403](#) IntegrationTestMTTR flaky due to aggressive RS restart timeout
- [HBASE-12401](#) Add some timestamp signposts in IntegrationTestMTTR
- [HBASE-12562](#) Handling memory pressure for secondary region replicas
- [HBASE-12398](#) Region isn't assigned in an extreme race condition
- [HBASE-12377](#) HBaseAdmin#deleteTable fails when META region is moved around the same timeframe
- [HBASE-12372](#) [WINDOWS] Enable log4j configuration in hbase.cmd
- [HBASE-12560](#) [WINDOWS] Append the classpath from Hadoop to HBase classpath in bin/hbase.cmd
- [HBASE-11716](#) LoadTestDataGeneratorWithVisibilityLabels should handle Delete mutations
- [HBASE-11976](#) Server startcode is not checked for bulk region assignment
- [HBASE-12367](#) Integration tests should not restore the cluster if the CM is not destructive
- [HBASE-12485](#) Maintain SeqId monotonically increasing when Region Replica is on
- [HBASE-12356](#) Rpc with region replica does not propagate tracing spans
- [HBASE-12335](#) IntegrationTestRegionReplicaPerf is flaky
- [HBASE-12317](#) Run IntegrationTestRegionReplicaPerf w.o mapred
- [HBASE-10955](#) HBCK leaves the region in masters in-memory RegionStates if region hdfs dir is lost
- [HBASE-12319](#) Inconsistencies during region recovery due to close/open of a region during recovery
- [HBASE-12301](#) user_permission command does not show global permissions
- [HBASE-12189](#) Fix new issues found by coverity static analysis
- [HBASE-12277](#) Refactor bulkLoad methods in AccessController to its own interface
- [HBASE-12278](#) Race condition in TestSecureLoadIncrementalHFilesSplitRecovery
- [HBASE-11788](#) hbase is not deleting the cell when a Put with a KeyValue, KeyValue.Type.Delete is submitted

- [HBASE-11609](#) LoadIncrementalHFiles fails if the namespace is specified
- [HBASE-12274](#) Race between RegionScannerImpl#nextInternal() and RegionScannerImpl#close() may produce null pointer exception
- [HBASE-12098](#) User granted namespace table create permissions can't create a table
- [HBASE-11794](#) StripeStoreFlusher causes NullPointerException
- [HBASE-12078](#) Missing Data when scanning using PREFIX_TREE DATA-BLOCK-ENCODING
- [HBASE-11728](#) Data loss while scanning using PREFIX_TREE DATA-BLOCK-ENCODING
- [HBASE-12156](#) TableName cache isn't used for one of valueOf methods
- [HBASE-12164](#) Check for presence of user Id in SecureBulkLoadEndpoint#secureBulkLoadHFiles() is inaccurate
- [HBASE-12162](#) HBaseAdmin#getTableDescriptor() may fail in case master fails over
- [HBASE-12095](#) SecureWALCellCodec should handle the case where encryption is disabled
- [HBASE-12123](#) Failed assertion in BucketCache after 11331
- [HBASE-11982](#) Bootstrapping hbase:meta table creates a WAL file in region dir
- [HBASE-10141](#) instead of putting expired store files thru compaction, just archive them
- [HBASE-12099](#) TestScannerModel fails if using jackson 1.9.13
- [HBASE-12072](#) We are doing 35 x 35 retries for master operations (Not full patch. Instead master operations use a 10min timeout)
- [HBASE-12056](#) RPC logging too much in DEBUG mode
- [HBASE-11988](#) AC/VC system table create on postStartMaster fails too often in test
- [HBASE-12055](#) TestBucketWriterThread hangs flakily based on timing
- [HBASE-11798](#) TestBucketWriterThread may hang due to WriterThread stopping prematurely
- [HBASE-11974](#) When a disabled table is scanned, NotServingRegionException is thrown instead of TableNotEnabledException
- [HBASE-12012](#) Improve cancellation for the scan RPCs
- [HBASE-12008](#) Remove IntegrationTestImportTsv#testRunFromOutputCommitter
- [HBASE-11868](#) Data loss in hlog when the hdfs is unavailable
- [HBASE-11989](#) IntegrationTestLoadAndVerify cannot be configured anymore on distributed mode
- [HBASE-11963](#) Synchronize peer cluster replication connection attempts

- [HBASE-11887](#) Memory retention in branch-1; millions of instances of LiteralByteString for column qualifier and value
- [HBASE-11705](#) callQueueSize should be decremented in a fail-fast scenario
- [HBASE-11898](#) CoprocessorHost.Environment should cache class loader instance.
- [HBASE-11876](#) RegionScanner.nextRaw should not update metrics
- [HBASE-11865](#) Result implements CellScannable; rather it should BE a CellScanner
- [HBASE-7910](#) Dont use reflection for security HBASE-12052 BulkLoad Failed due to no write permission on input files
- [HBASE-11973](#) The url of the token file location set by IntegrationTestImportTsv should point to the localfs
- [HBASE-11940](#) Add utility scripts for snapshotting / restoring all tables in cluster
- [HBASE-11847](#) HFile tool should be able to print block headers
- [HBASE-11845](#) HFile tool should implement Tool, disable blockcache by default
- [HBASE-11942](#) Fix TestHRegionBusyWait
- [HBASE-11331](#) [blockcache] lazy block decompression
- [HBASE-11678](#) BucketCache ramCache fills heap after running a few hours
- [HBASE-11810](#) Access SSL Passwords through Credential Provider API (Larry McCay)
- [HBASE-11908](#) Region replicas should be added to the meta table at the time of table creation
- [HBASE-12561](#) Replicas of regions can be cached from different instances of the table in MetaCache
- [HBASE-11863](#) WAL files are not archived and stays in the WAL directory after splitting
- [HBASE-11813](#) CellScanner#advance may overflow stack (Stack)
- [HBASE-11903](#) Directly invoking split & merge of replica regions should be disallowed
- [HBASE-11886](#) The creator of the table should have all permissions on the table
- [HBASE-11857](#) Restore ReaderBase.initAfterCompression() and WALCellCodec.create(Configuration, CompressionContext)
- [HBASE-11762](#) Record the class name of Codec in WAL header
- [HBASE-11580](#) Failover handling for secondary region replicas
- [HBASE-11842](#) Integration test for async wal replication to secondary regions
- [HBASE-11564](#) Improve cancellation management in the rpc layer

- [HBASE-11297](#) Remove some synchros in the rpcServer responder
- [HBASE-11719](#) Remove some unused paths in AsyncClient
- [HBASE-11718](#) Remove some logs in RpcClient.java
- [HBASE-10814](#) RpcClient: some calls can get stuck when connection is closing
- [HBASE-10942](#) support parallel request cancellation for multi-get
- [HBASE-11851](#) RpcClient can try to close a connection not ready to close
- [HBASE-11835](#) Wrong managenement of non expected calls in the client
- [HBASE-11836](#) IntegrationTestTimeBoundedMultiGetRequestsWithRegionReplicas tests simple get by default
- [HBASE-11654](#) WAL Splitting dirs are not deleted after replay
- [HBASE-11837](#) Scanner from RegionCoprocessorEnvironment.getTable(TableName) returns no local data
- [HBASE-11766](#) Backdoor CoprocessorHConnection is no longer being used for local writes
- [HBASE-11574](#) hbase:meta's regions can be replicated
- [HBASE-11571](#) Bulk load handling from secondary region replicas
- [HBASE-11569](#) Flush / Compaction handling from secondary region replicas
- [HBASE-11572](#) Add support for doing get/scans against a particular replica_id
- [HBASE-11567](#) Write bulk load COMMIT events to WAL
- [HBASE-11568](#) Async WAL replication for region replicas
- [HBASE-11820](#) ReplicationSource : Set replication codec class as RPC codec class on a cloned Configuration
- [HBASE-11367](#) Pluggable replication endpoint
- [HBASE-11512](#) Write region open/close events to WAL
- [HBASE-11511](#) Write flush events to WAL
- [HBASE-11594](#) Unhandled NoNodeException in distributed log replay mode
- [HBASE-11550](#) Custom value for BUCKET_CACHE_BUCKETS_KEY should be sorted
- [HBASE-11551](#) BucketCache.run() doesn't handle exceptions correctly
- [HBASE-11620](#) Record the class name of Writer in WAL header so that only proper Reader can open the WAL file
- [HBASE-11557](#) Counter.class should always be added as dependencyJar

- [HBASE-10674](#) HBCK should be updated to do replica related checks
- [HBASE-11261](#) Handle splitting/merging of regions that have region_replication greater than one
- [HBASE-10818](#) Add integration test for bulkload with replicas
- [HBASE-11214](#) Fixes for scans on a replicated table
- [HBASE-10357](#) Failover RPC's for scans
- [HBASE-11344](#) Hide row keys and such from the web UIs
- [HBASE-11293](#) Master and Region servers fail to start when hbase.master.ipc.address=0.0.0.0, hbase.regionserver.ipc.address=0.0.0.0 and Kerberos is enabled
- [HBASE-10957](#) [HBASE-10070](#): HMaster can abort with NPE in #rebuildUserRegions
- [HBASE-10859](#) HStore.openStoreFiles() should pass the StoreFileInfo object to createStoreFileAndReader().
- [HBASE-10858](#) TestRegionRebalancing is failing
- [HBASE-10785](#) Metas own location should be cached
- [HBASE-10814](#) RpcClient: some calls can get stuck when connection is closing
- [HBASE-10791](#) Add integration test to demonstrate performance improvement
- [HBASE-10810](#) LoadTestTool should share the connection and connection pool
- [HBASE-10794](#) multi-get should handle replica location missing from cache
- [HBASE-10634](#) Multiget doesn't fully work.
- [HBASE-10701](#) Cache invalidation improvements from client side
- [HBASE-10778](#) Unique keys accounting in MultiThreadedReader is incorrect
- [HBASE-10743](#) Replica map update is problematic in RegionStates
- [HBASE-10616](#) Integration test for multi-get calls
- [HBASE-10734](#) Fix RegionStates.getRegionAssignments to not add duplicate regions
- [HBASE-10729](#) Enable table doesn't balance out replicas evenly if the replicas were unassigned earlier
- [HBASE-10720](#) rpcClient: Wrong log level when closing the connection
- [HBASE-10688](#) Add a draining_node script to manage nodes in draining mode
- [HBASE-10704](#) BaseLoadBalancer#roundRobinAssignment() may add same region to assignment plan multiple times

- [HBASE-10633](#) StoreFileRefresherChore throws ConcurrentModificationException sometimes
- [HBASE-10572](#) Create an IntegrationTest for region replicas.
- [HBASE-10703](#) TestAsyncProcess does not pass on
- [HBASE-10070](#) [HBASE-10637](#) rpcClient: Setup the iostreams when writing
- [HBASE-10635](#) thrift#TestThriftServer fails due to TTL validity check
- [HBASE-10620](#) LoadBalancer.needsBalance() should check for co-located region replicas as well
- [HBASE-10672](#) Table snapshot should handle tables whose REGION_REPLICATION is greater than one.
- [HBASE-10591](#) Sanity check table configuration in createTable
- [HBASE-10661](#)
TestStochasticLoadBalancer.testRegionReplicationOnMidClusterWithRacks() is flaky
- [HBASE-10351](#) LoadBalancer changes for supporting region replicas
- [HBASE-10630](#) NullPointerException in ConnectionManager.locateRegionInMeta() due to missing region info
- [HBASE-10356](#) Failover RPC's for multi-get.
- [HBASE-10525](#) Allow the client to use a different thread for writing to ease interrupt.
- [HBASE-10355](#) Failover RPC's from client using region replicas.
- [HBASE-10352](#) Region and RegionServer changes for opening region replicas, and refreshing store files
- [HBASE-10351](#) LoadBalancer changes for supporting region replicas.
- [HBASE-10359](#) Master/RS WebUI changes for region replicas.
- [HBASE-10362](#) HBCK changes for supporting region replicas.
- [HBASE-10361](#) Enable/AlterTable support for region replicas.
- [HBASE-10350](#) Master/AM/RegionStates changes to create and assign region replicas.
- [HBASE-10490](#) Simplify RpcClient code
- [HBASE-10517](#) NPE in MetaCache.clearCache()
- [HBASE-10479](#) HConnection interface is public but is used internally, and contains a bunch of methods
- [HBASE-10348](#) HTableDescriptor changes for region replicas
- [HBASE-10354](#) Add an API for defining consistency per request

- [HBASE-10347](#) HRegionInfo changes for adding replicaid and MetaEditor/MetaReader changes for region replicas
- [HBASE-10277](#) refactor AsyncProcess
- [HBASE-10427](#) clean up HRegionLocation/ServerName usage
- [HBASE-10472](#) Manage the interruption in ZKUtil#getData

1.7.7. Hive 0.14.0

- [HIVE-8947](#) HIVE-8876 also affects Postgres < 9.2
- [HIVE-8901](#) increase retry attempt, interval on metastore database errors
- [HIVE-8890](#) HiveServer2 dynamic service discovery: use persistent ephemeral nodes curator recipe
- [HIVE-8880](#) non-synchronized access to split list in OrcInputFormat
- [HIVE-8876](#) incorrect upgrade script for Oracle (13->14)
- [HIVE-8875](#) hive.optimize.sort.dynamic.partition should be turned off for ACID
- [HIVE-8813](#) Allow tests to be excluded based on pattern/regex
- [HIVE-8880](#) non-synchronized access to split list in OrcInputFormat

- [TEZ-1761](#) TestRecoveryParser::testGetLastInProgressDAG fails in similar manner to TEZ-1686.
- [TEZ-1758](#) TezClient should provide YARN diagnostics when the AM crashes
- [TEZ-1750](#) Add a DAGScheduler which schedules tasks only when sources have been scheduled.
- [TEZ-1749](#) Increase test timeout for TestLocalMode.testMultipleClientsWithSession
- [TEZ-1745](#) TestATSHistoryLoggingService::testATSHistoryLoggingServiceShutdown can be flaky.
- [TEZ-1747](#) Increase test timeout for TestSecureShuffle.
- [TEZ-1746](#) Flaky test in TestVertexImpl and TestExceptionPropagation.
- [TEZ-1742](#) Improve response time of internal preemption.

1.7.17. Zookeeper 3.4.6

- [ZOOKEEPER-2064](#) Prevent resource leak in various classes
- [ZOOKEEPER-2053](#) Make scripts use ZOOKEEPER_HOME if set.
- [ZOOKEEPER-1926](#) Unit tests should only use build/test/data for data
- [ZOOKEEPER-1897](#) ZK Shell/Cli not processing commands
- [ZOOKEEPER-1876](#) Add support for installing windows services in .cmd scripts
- [ZOOKEEPER-1888](#) ZkCli.cmd commands fail with "'java' is not recognized as an internal or external command"

- [ZOOKEEPER-1848](#) [WINDOWS] Java NIO socket channels does not work with Windows ipv6 on JDK6
- [ZOOKEEPER-1791](#) ZooKeeper package includes unnecessary jars that are part of the package.
- [ZOOKEEPER-1575](#) adding .gitattributes to prevent CRLF and LF mismatches for source and text files
- [ZOOKEEPER-1574](#) Set svn:eol-style property to native.

1.8. Known Issues for HDP 2.2

HDP 2.2.0 has the following known issues, scheduled for resolution in a future release. Where available, a workaround has been provided.

1.8.1. Debian Known Issues

- [BUG-19351](#): Zookeeper does not have shell access on Ubuntu and Debian Hosts.

Description: The /etc/passwd file has no shell access for Zookeeper:

```
zookeeper:x:108:115:ZooKeeper User,,,:/var/lib/zookeeper:/bin/false
```

Workaround: Modify the zookeeper user to have shell access. For example: usermod zookeeper -s /bin/bash

- [BUG-28102](#): Update to headers needed for /etc/init.d/ranger-admin and /etc/init.d/ranger-usersyncscripts after Ranger install on Debian 6.

Problem: The init scripts installed by Ranger for admin and usersync are missing a comment block at the beginning (details <https://wiki.debian.org/LSBInitScripts/>), resulting in error messages.

Workaround: Add the following header to these scripts:

```
### BEGIN INIT INFO
# Provides:          scriptname
# Required-Start:    $remote_fs $syslog
# Required-Stop:     $remote_fs $syslog
# Default-Start:    2 3 4 5
# Default-Stop:     0 1 6
# Short-Description: Start daemon at boot time
# Description:       Enable service provided by daemon.
### END INIT INFO
```

1.8.2. Falcon Known Issues

- [BUG-26944](#): E0803: IO error, null during scheduling feed on a cluster with wire encryption on.

Problem: Falcon has difficulty writing to target clusters with wire encryption on. The ssl-client on the CP must be valid for doing SSL negotiation with the target cluster.

Workaround: Have Falcon write to target clusters with wire encryption disabled.

- BUG-25179: Falcon's default port is 15443 if TLS is enabled, 15000 otherwise.

Problem: Falcon server is on port 15443 or 15000 based on setting for TLS. In Falcon startup.properties:

- If falcon.enableTLS is set to true explicitly or not set at all, falcon starts at port 15443 on https:// by default.
- If falcon.enableTLS is set to false, falcon starts at port 15000 on http://.

Workaround: To change the port, use -port option. If falcon.enableTLS is not set explicitly but port is set explicitly, port that ends with 443 will automatically put falcon on https://. Any other port will put falcon on http://.

- BUG-25179: You must add your own keystore to /etc/falcon/conf/ directory as prism.keystore, when falcon.enableTLS is set to true.
- BUG-28055: Ambari currently configures the config store to local fs in ".config.store.uri" (startup properties) and "Falcon store URI" (falcon server).

file:///hadoop/falcon/store

It is best to write to HDFS. In Ambari, modify your Falcon config to store to HDFS.

Manage the Falcon service > Select Config > in Falcon Store URI, specify a link to HDFS. For example:

*.config.store.uri=hdfs://ip-172-31-13-179.ec2.internal:8020/apps/falcon

1.8.3. Hadoop Common/HDFS Known Issues

- BUG-38088, BUG-36247, BUG-38009: DataNode restart fails during Rolling Upgrade from 2.2.0-2.2.6 to 2.3.x

Problem: DataNode restart fails during Rolling Upgrade from 2.2.0-2.2.6 to 2.3.x. Not all writers have responder running, but sendOOB() tries anyway. This causes NPE and the shutdown thread dies, halting the shutdown after only shutting down DataXceiverServer

Workaround: Skip the failed datanodes, downgrade them and try to upgrade them again.

Workaround: Manually restart the failed datanodes.

- BUG-30030: Incomplete installation of hadoop-httpfs.

Problem: hadoop-httpfs RPM scripts are incomplete for HDP 2.2. This affects proxy setup that allows Hue to interact with HA clusters.

Workaround: Have Falcon write to target clusters with wire encryption disabled.

Workaround: The following steps should be executed on the node that will be hosting the HttpFS service. This assumes that HDP 2.2 has already been deployed and configured.

1. Install the hadoop_2_2_0_0_2041-httpfs package:

```
yum install hadoop-httpfs
```

2. Create a symlink in /usr/lib to the location where httpfs is installed:

```
ln -s /usr/hdp/current/hadoop-client/.../hadoop-httpfs /usr/lib/hadoop-
httpfs
```

3. Create a symlink to libexec:

```
ln -s /usr/hdp/current/hadoop-client/.../hadoop/libexec /usr/lib/hadoop-
httpfs/libexec
```

4. Create configuration directories and copy the default set of configurations:

```
mkdir -p /etc/hadoop-httpfs/conf
mkdir -p /etc/hadoop-httpfs/tomcat-deployment/conf
cp -r /usr/hdp/2.2.0.0-2041/etc/hadoop-httpfs/conf.empty/* /etc/hadoop-
httpfs/conf/
cp -r /usr/hdp/2.2.0.0-2041/etc/hadoop-httpfs/tomcat-deployment.dist/conf/
* /etc/hadoop-httpfs/tomcat-deployment/conf
```

5. Enable the init.d script for HttpFS by creating the following symlink:

```
ln -s /usr/hdp/2.2.0.0-2041/etc/rc.d/init.d/hadoop-httpfs /etc/init.d/
hadoop-httpfs
```

6. Create the following symlinks to point to the Tomcat libraries and binary scripts that HttpFS will use:

```
ln -s /usr/lib/bigtop-tomcat/lib /etc/hadoop-httpfs/tomcat-deployment/
libln -s /usr/lib/bigtop-tomcat/bin /etc/hadoop-httpfs/tomcat-deployment/
bin
```

7. Start the HttpFs server:

```
service hadoop-httpfs start
```

1.8.4. HBase Known Issues

- BUG-26592: Multiple tests are failing because of System time goes back frequently on SLES

Problem: SUSE 11 SP3 clusters running on Amazon EC2 have had the system clock frequently going back (hundreds of ms), which causes multiple issues in HBase. The HBase data model assumes that timestamps are monotonically increasing, and failing that may result in updates being eclipsed by previous mutations.

Workaround: Setup NTP and ensure that system clock time does not drift when running HBase. See <https://hbase.apache.org/book.html#basic.prerequisites> for more details.

- BUG-23981 [Windows]: IOException: Invalid HFile block magic in Windows unit tests

If you use HBase on a local filesystem (not HDFS) on Windows for single node non-distributed clusters, concurrent hfile readers might return data belonging to a different offset than what was requested, resulting in read failures.

1.8.5. HDFS Known Issues

- BUG-26890: Commands in HA mode behave differently compared to non-HA

Problem: Commands in HA mode behave differently compared to non-HA. For example:

`hdfs dfsadmin -safemode enter` - if nn2 is active and nn1 is standby, command will run with no errors, but it will set standby to safemode and not active. If nn1 is actually off, the command will try nn2 and the command in effect will do what it needs to do.

The same behavior is true for `hdfs dfsadmin -saveNamespace`.

Workaround: You can add the `fs` and specify `hdfs://hostname:8020` of the active namenode, for example: `hdfs dfsadmin -fs hdfs://<namenodehostactive>:8020 -saveNamespace`.

1.8.6. Hive Known Issues

- BUG-28161, BUG-28234: Hive Server2 Long running test failed after 44 hours with OutOfMemory

Problem: Hive Server 2 out of memory due to `FileSystem.CACHE` leak

Workaround: To prevent memory leaks in unsecure mode, disable file system caches by setting the following parameters to true in hive configuration (`hive-site.xml`).

`fs.hdfs.impl.disable.cache` – Disable HDFS filesystem cache, default false.

`fs.file.impl.disable.cache` – Disable local filesystem cache, default false.

- BUG-27913 Error while upgrading Hive Metastore schema for Oracle

Problem: The pre-upgrade script causes an error when upgrading Hive Metastore using an Oracle DB. For example, after executing the command `-upgradeSchema`, the following error message occurs:

```
root@ip-172-31-42-3 ~# /usr/hdp/2.2.0.0-2036/hive/bin/schematool -upgradeSchema -dbType oracle
14/11/17 14:11:38 WARN conf.HiveConf: HiveConf of name

Starting upgrade metastore schema from version 0.13.0 to 0.14.0
Upgrade script upgrade-0.13.0-to-0.14.0.oracle.sql
Error: ORA-00955: name is already used by an existing object
```

```
(state=42000,code=955)
Warning in pre-upgrade script pre-0-upgrade-0.13.0-to-
0.14.0.oracle.sql: Schema script failed, errorcode 2
Completed upgrade-0.13.0-to-0.14.0.oracle.sql
schemaTool completed
```

Workaround: Ignore the error message. The schema tool has upgraded.

- **BUG-27637:** Postgres Metastore has intermittent test failure due to "ERROR: could not serialize access due to read/write dependencies among transactions"

Problem: Sometimes the acid_concurrency test on Postgres Metastore test fails with this error:

```
ERROR: could not serialize access due to read/write dependencies among
transactions
Detail: Reason code: Canceled on identification as a pivot, during write.
Hint: The transaction might succeed if retried.

- **BUG-27197: MatchPath not available in HDP 2.2.**

Intellectual property issues prevent Hortonworks from shipping MatchPath in Hive 0.14.x.

- BUG-26418: SSLv3 not supported in Hive 0.14.x

Problem: SSLv3 is vulnerable to the Poodle Attack and is therefore disabled in Hive 0.14.x.
Do not enable SSLv3 in Hive.

1.8.7. Kafka Known Issues

- BUG-50531: Kafka file system support.

Issue: Encrypted file systems such as SafenetFS are not supported for Kafka. Index file corruption can occur.

For more information, see: [Install Kafka](#).

1.8.8. Knox Known Issues

- BUG-24945: [KNOX-443] Support for active HS2 clients (through Knox) during rolling upgrades will be addressed in a later release.

1.8.9. Oozie Known Issues

- BUG-27982 Oozie client package installation from public HDP repo fails because of hdp-select

Problem: Oozie-client is missing a dependency on hdp-select. If you install oozie-client prior to any other stack applications, installation fails with with an error message similar to the following:

```
Installing: oozie_2_2_0_0_1947-client-4.1.0.2.2.0.0-1947 [error]
Installation of oozie_2_2_0_0_1947-client-4.1.0.2.2.0.0-1947 failed:

/var/tmp/rpm-tmp.48695: line 6: /usr/bin/hdp-select: No such file or
directory
error: %post(oozie_2_2_0_0_1947-client-4.1.0.2.2.0.0-1947.noarch)
scriptlet failed, exit status 127
Abort, retry, ignore? [a/r/i] (a):
```

Workaround: If you only intend to install oozie-client and no other HDP 2.2 components, install and run hdp-select first.

1.8.10. Phoenix Known Issues

- BUG-26661: Windows runs failed with "region isn't co-located with its data" exception

Problem: The Local Index feature is considered experimental and should not be enabled at this time, except for preview purposes.

- BUG-28226: Error 504 after upgrading from HDP 2.1 to HDP 2.2.

Problem: After upgrading from HDP 2.1 to HDP 2.2, queries such as the following generate an ERROR 504:
./psql.py
ip-172-31-43-221.ec2.internal:2181 /grid/0/hdp/2.2.0.0- 2041/
phoenix/doc/examples/WEB_STAT.sql /grid/0/hdp/2.2.0.0- 2041/
phoenix/doc/examples/WEB_STAT.csv /grid/0/hdp/2.2.0.0- 2041/
phoenix/doc/examples/WEB_STAT_QUERIES.sql.

Error detail: org.apache.phoenix.schema.ColumnNotFoundException: ERROR 504 (42703): Undefined column. columnName=INDEX_TYPE

Workaround: Follow instructions in the "Manual Upgrade to HDP 2.2" document, "Configure Phoenix" section, step 4: replace the client jar file before connecting the new Phoenix client to the Phoenix cluster.

1.8.11. Pig Known Issues

- Nested fields will experience slower performance because they are not currently supported by predicate pushdown in Pig.

1.8.12. Ranger (formerly XA Secure) Known Issues

- BUG-28102: Update to headers needed for /etc/init.d/ranger-admin and /etc/init.d/ranger-usersyncscripts after Ranger install on Debian 6.

Problem: The init scripts installed by Ranger for admin and usersync are missing a comment block at the beginning (details <https://wiki.debian.org/LSBInitScripts/>), resulting in error messages.

Workaround: Add the following header to these scripts:

```
### BEGIN INIT INFO
# Provides:           scriptname
# Required-Start:    $remote_fs $syslog
# Required-Stop:     $remote_fs $syslog
# Default-Start:    2 3 4 5
# Default-Stop:     0 1 6
# Short-Description: Start daemon at boot time
# Description:       Enable service provided by daemon.
### END INIT INFO
```

1.8.13. Sqoop Known Issues

- BUG-25282: j.l.ArrayIndexOutOfBoundsException using –map-column-hive

Problem: Running this command with the --map-column-hive statement:

```
sqoop import --verbose --connect
'jdbc:mysql://sandbox.hortonworks.com/demo' --table customer_address --
username carter --password password --create-hcatalog-table --hcatalog-
table customer_address --hcatalog-storage-stanza "stored as orc" --map-
column-hive fdsa -m 1
```

Returns:

```
2014-10-17 21:49:27,597 DEBUG sqoop.Sqoop (Sqoop.java:run(137)) - 1
java.lang.ArrayIndexOutOfBoundsException: 1
at org.apache.sqoop.SqoopOptions.parseColumnMapping(SqoopOptions.java:1196)
at org.apache.sqoop.SqoopOptions.setMapColumnHive(SqoopOptions.java:1201)
at org.apache.sqoop.tool.BaseSqoopTool.applyHiveOptions(BaseSqoopTool.java:1111)
at org.apache.sqoop.tool.ImportTool.applyOptions(ImportTool.java:961)
at org.apache.sqoop.tool.SqoopTool.parseArguments(SqoopTool.java:433)
at org.apache.sqoop.Sqoop.run(Sqoop.java:131)
at org.apache.hadoop.util.ToolRunner.run(ToolRunner.java:70)
at org.apache.sqoop.Sqoop.runSqoop(Sqoop.java:179)
at org.apache.sqoop.Sqoop.runTool(Sqoop.java:218)
at org.apache.sqoop.Sqoop.runTool(Sqoop.java:227)
at org.apache.sqoop.main(Sqoop.java:236)
```

There is no fdsa column. The command works without the --map-column-hive statement.

Workaround: Sqoop is expecting comma separated list of mapping in form <name of column>=<new type>. For example: \$ sqoop import ... --map-column-java id=String,value=Integer

1.8.14. Ubuntu Known Issues

- BUG-19351: Zookeeper does not have shell access on Ubuntu and Debian Hosts.

Description: The /etc/passwd file has no shell access for zookeeper:

```
zookeeper:x:108:115:ZooKeeper User,,,:/var/lib/zookeeper:/bin/false
```

Workaround: Modify the zookeeper user to have shell access. For example:

```
usermod zookeeper -s /bin/bash
```

1.8.15. YARN Known Issues

- BUG-35942: Users must manually configure ZooKeeper security with ResourceManager High Availability.
- BUG-27604: After upgrade from 2.1 of Highly Available system, ResourceManager fails to elect a master.

Problem: After upgrading an HA system from HDP 2.2 from HDP 2.1, you must manually clear the ResourceManager state store as part of the upgrade or the following error message will occur:

```
Exception transitioning to active    PERMISSIONS=All users are allowed
2014-11-12 05:36:04,941 WARN  ha.ActiveStandbyElector
(ActiveStandbyElector.java:becomeActive(809)) - Exception handling the
winning of election
org.apache.hadoop.ha.ServiceFailedException: RM could not transition to
Active at org.apache.hadoop.yarn.server.resourcemanager.
EmbeddedElectorService.
becomeActive(EmbeddedElectorService.java:128)
[...]
```

Workaround: Manually clear the ResourceManager state store:

1. Run:

```
yarn resourcemanager -format-state-store
```

2. Start the ResourceManager:

```
su -l yarn -c "/usr/hdp/current/hadoop-yarn-
resourcemanager/sbin/yarn-daemon.sh start resourcemanager"
```

1.8.16. ZooKeeper Known Issues

- BUG-19351: Zookeeper does not have shell access on Ubuntu and Debian Hosts.

Description: The /etc/passwd file has no shell access for Zookeeper:

```
zookeeper:x:108:115:ZooKeeper User ,,:/var/lib/zookeeper:/bin/false
```

Workaround: Modify the zookeeper user to have shell access. For example:

```
usermod zookeeper -s /bin/bash
```

- BUG-28102: Update to headers needed for /etc/init.d/ranger-admin and /etc/init.d/ranger-usersyncscripts after Ranger install on Debian 6.

Problem: The init scripts installed by Ranger for admin and usersync are missing a comment block at the beginning (details <https://wiki.debian.org/LSBInitScripts/>), resulting in error messages.

Workaround: Add the following header to these scripts:

```
### BEGIN INIT INFO
# Provides:          scriptname
# Required-Start:    $remote_fs $syslog
# Required-Stop:     $remote_fs $syslog
# Default-Start:    2 3 4 5
# Default-Stop:      0 1 6
# Short-Description: Start daemon at boot time
# Description:       Enable service provided by daemon.
### END INIT INFO
```
