Hortonworks SmartSense: Release Notes

Copyright © 2012-2016 Hortonworks, Inc. All rights reserved.

The Hortonworks Data Platform, powered by Apache Hadoop, is a massively scalable and 100% open source platform for storing, processing and analyzing large volumes of data. It is designed to deal with data from many sources and formats in a very quick, easy and cost-effective manner. The Hortonworks Data Platform consists of the essential set of Apache Hadoop projects including MapReduce, Hadoop Distributed File System (HDFS), HCatalog, Pig, Hive, HBase, ZooKeeper and Ambari. Hortonworks is the major contributor of code and patches to many of these projects. These projects have been integrated and tested as part of the Hortonworks Data Platform release process and installation and configuration tools have also been included.

Unlike other providers of platforms built using Apache Hadoop, Hortonworks contributes 100% of our code back to the Apache Software Foundation. The Hortonworks Data Platform is Apache-licensed and completely open source. We sell only expert technical support, [training](#) and partner-enablement services. All of our technology is, and will remain free and open source. Please visit the [Hortonworks Data Platform](#) page for more information on Hortonworks technology. For more information on Hortonworks services, please visit either the [Support](#) or [Training](#) page. Feel free to [Contact Us](#) directly to discuss your specific needs.

1.2. SmartSense 1.3.1 Known Issues	2

1. SmartSense 1.3.1 Release Notes

The Release Notes include the following information for SmartSense 1.3.1:

- [New Services and Features \[1\]](#)
- [Fixed Issues \[1\]](#)
- [Known Issues \[1\]](#)

1.1. New Services and Features

SmartSense 1.3.1 includes the following **new features**:

- Support for multi-home environments where cluster has multiple IPs and hostnames.
- Support for using SmartSense View with a views-only Ambari instance.
- Capturing of Kerberos configuration data.

SmartSense 1.3.1 includes the following **improvements**:

- Log collection includes only component-specific log files, preventing from collecting duplicate data.
- Reduction in the number of logs captured to only .log and .out.
- Support for hostnames longer than 64 chars.

1.2. Fixed Issues

The following fixes have been implemented in SmartSense 1.3.1:

Table 1.1. SmartSense 1.3.1 Fixed Issues

HWX Jira	Bug Description
ST-2360	When Ambari server's HTTPS port was set, Ambari server data was not being captured correctly.
ST-2334	NTP status was not captured on SLES 12, returning <code>no such service ntp</code> .
ST-2331	Upgrading HST 1.3 to 1.3 didn't preserve bundle status.
ST-2307	NPE exception in <code>hst-agent.log</code> when collecting Hive reports.
ST-2551	Set the <code>java.io.tmpdir</code> to avoid filling <code>/tmp</code> on smaller systems.
ST-2439	Fixed the typo for 'Storage_Cost_Per_GB' (earlier: 'Storage_Cost_Per_Gb') in the Chargeback Dashboard.
ST-2437	Fixed anonymization logic to anonymize all matches of a single rule within a file and not just the first.
ST-2350	Cancelled bundles were not fully deleted.

1.3. Known Issues

SmartSense 1.3.1 has the following known issues, scheduled for resolution in a future release:

Table 1.2. SmartSense 1.3.1 Known Issues

Issue	Workaround
In some environments, SmartSense agent commands fail with an SSLError in the agent logs.	Run <code>hst reset</code> on HST server and <code>hst reset-agent</code> on all HST agents. See SmartSense SSL Troubleshooting .
