Kafka Broker Log Directory

Description

The log directory for log files of the role Kafka Broker.

Related Name

kafka.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka Broker Logging Threshold

Description

The minimum log level for Kafka Broker logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Kafka Broker Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka Broker logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Kafka Broker Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka Broker logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Enable Lagging Replicas Test

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KAFKA-KAFKA_BROKER-7.2.0-LAGGING_REPLICAS_test_enable

Required

false

Enable Network Processor Capacity Test

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KAFKA-KAFKA_BROKER-7.2.0-NETWORK_PROCESSOR_CAPACITY_test_enable

Required

false

Enable Offline Directory Test

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KAFKA-KAFKA_BROKER-7.2.0-OFFLINE_DIRECTORIES_test_enable

Required

false

Enable Offline Partitions Test

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KAFKA-KAFKA_BROKER-7.2.0-OFFLINE_PARTITIONS_test_enable

Required

false

Enable Request Handler Capacity Test

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KAFKA-KAFKA_BROKER-7.2.0-REQUEST_HANDLER_CAPACITY_test_enable

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_broker_fd_thresholds

Required

false

Kafka Broker Host Health Test

Description

When computing the overall Kafka Broker health, consider the host's health.

Related Name

Default Value

true

API Name

kafka_broker_host_health_enabled

Required

false

Kafka Broker Process Health Test

Description

Enables the health test that the Kafka Broker's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

kafka_broker_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Advertised Host

Description

If set, this is the hostname given out to producers, consumers, and other brokers to use in establishing connections. Never set this property at the group level; it should always be overriden on instance level.

Related Name

advertised.host.name

Default Value

API Name

advertised.host.name

Required

false

Enable Auditing to Atlas

Description

When enabled, Kafka will audit Kafka Topics, Producers and Consumers to Atlas

Related Name

atlas.audit.enabled

Default Value

false

API Name

atlas.audit.enabled

Required

false

Authenticate Zookeeper Connection

Description

Enables authentication of SASL connections with zookeeper, if Kerberos authentication is enabled. It also allows a broker to set SASL ACL on zookeeper nodes, which locks these nodes down so that only a Kafka broker can modify it.

Related Name

authenticate.zookeeper.connection

Default Value

true

API Name

authenticate.zookeeper.connection

Required

false

Broker ID

Description

ID uniquely identifying each broker. Never set this property at the group level; it should always be overridden on instance level.

Related Name

broker.id

Default Value

API Name

broker.id

Required

false

Additional Broker Java Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

broker_java_opts

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1

API Name

broker_java_opts

Required

false

Java Heap Size of Broker

Description

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes. Kafka does not generally require setting large heap sizes. It is better to let the file system cache utilize the available memory.

Related Name

broker_max_heap_size

Default Value

1 GiB

API Name

broker_max_heap_size

Required

false

Kafka Broker Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Enable Rack Awareness

Description

Enable rack awareness. If it is enabled, broker.rack property is set for each broker according to rack settings for the hosts in CM.

Related Name

enable.rack.awareness

Default Value

false

API Name

enable.rack.awareness

Required

false

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

2 minute(s)

API Name

graceful_stop_timeout

Required

false

Enable Authenticated Communication with the JMX Agent

Description

Enables Authenticated Communication with the JMX Agent.

Related Name

jmx.auth.enabled

Default Value

false

API Name

jmx.auth.enabled

Required

false

Name of User with Read-Write Access to the JMX Agent

Description

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user

Default Value

controlRole

API Name

jmx.control.user

Required

false

Password of user with read-write access to the JMX agent

Description

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user.passwd

Default Value

API Name

jmx.control.user.passwd

Required

false

Name of User with read-only access to the JMX Agent

Description

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user

Default Value

monitorRole

API Name

jmx.monitor.user

Required

false

Password of User with read-only Access to the JMX agent

Description

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user.passwd

Default Value

API Name

jmx.monitor.user.passwd

Required

false

Enable TLS client authentication for JMX port

Description

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the Kafka JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name

jmx.ssl.client.auth.enabled

Default Value

false

API Name

jmx.ssl.client.auth.enabled

Required

false

Enable TLS/SSL for Kafka JMX

Description

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

jmx.ssl.enabled

Default Value

false

API Name

jmx.ssl.enabled

Required

false

Enable HTTP Metric Report Basic Authentication

Description

Enable Basic Authentication for Kafka Metric HTTP Endpoint.

Related Name

kafka.http.metrics.authentication.enabled

Default Value

false

API Name

kafka.http.metrics.authentication.enabled

Required

false

HTTP Metric Report Host

Description

The host that the HTTP metric reporter binds to.

Related Name

kafka.http.metrics.host

Default Value

0.0.0.0

API Name

kafka.http.metrics.host

Required

false

HTTP Metric Report Password

Description

The password used for Basic Authentication.

Related Name

kafka.http.metrics.password

Default Value

API Name

kafka.http.metrics.password

Required

false

SSL Encryption For HTTP Metric Reporter

Description

Enable SSL Encryption for HTTP Metrics Endpoint. IMPORTANT: SSL encryption will be enabled if ssl_enabled config is enabled as well!

Related Name

kafka.http.metrics.ssl.enabled

Default Value

false

API Name

kafka.http.metrics.ssl.enabled

Required

false

HTTP Metric Report User

Description

The username used for Basic Authentication.

Related Name

kafka.http.metrics.user

Default Value

API Name

kafka.http.metrics.user

Required

false

Data Directories

Description

A list of one or more directories in which Kafka data is stored.. Each new partition created is placed in the directory that currently has the least amount of partitions.. Each directory should be on its own separate drive.

Related Name

log.dirs

Default Value

/var/local/kafka/data

API Name

log.dirs

Required

true

Data Retention Size

Description

The amount of data to retain in the log for each topic-partition. This is the limit per partition. Multiply it by the number of partitions to get the total amount of data retained for the topic. This property can take -1 as a value, which is interpreted as unlimited. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded.

Related Name

log.retention.bytes

Default Value

-1 B

API Name

log.retention.bytes

Required

false

Data Retention Check Interval

Description

The frequency, in milliseconds, that the log cleaner checks whether any log segment is eligible for deletion, per retention policies.

Related Name

log.retention.check.interval.ms

Default Value

5 minute(s)

API Name

log.retention.check.interval.ms

Required

false

Data Retention Time

Description

The maximum time before a new log segment is rolled out. If both log.retention.ms and log.retention.bytes are set, a segment is deleted when either limit is exceeded. This property can take -1 as a value, which is interpreted as unlimited.

Related Name

log.retention.ms

Default Value

7 day(s)

API Name

log.retention.ms

Required

true

Data Log Roll Time

Description

The maximum time before a new log segment is rolled out.

Related Name

log.roll.ms

Default Value

API Name

log.roll.ms

Required

false

Segment File Size

Description

The log for a topic partition is stored as a directory of segment files. This setting controls the size to which a segment file can grow before a new segment is rolled over in the log. This value has to be larger than message.max.bytes.

Related Name

log.segment.bytes

Default Value

1 GiB

API Name

log.segment.bytes

Required

false

Maximum Connections per IP Address

Description

Maximum number of connections allowed from each IP address.

Related Name

max.connections.per.ip

Default Value

API Name

max.connections.per.ip

Required

false

Number of I/O Threads

Description

The number of I/O threads that the server uses for executing requests. You should have at least as many threads as you have disks.

Related Name

num.io.threads

Default Value

8

API Name

num.io.threads

Required

false

Number of Network Threads

Description

Number of threads that the server uses to handle incoming requests and outgoing responses.

Related Name

num.network.threads

Default Value

8

API Name

num.network.threads

Required

false

Number of Recovery Threads per data directory

Description

Number of threads per data directory that the server uses for log recovery during startup and log flushing during shutdown. Increasing this value may improve broker startup performance if you have a high number of segments. The total number of recovery threads (number of threads per data dir * number of data dirs) should not exceed the number of CPU cores. The default value is 1.

Related Name

num.recovery.threads.per.data.dir

Default Value

1

API Name

num.recovery.threads.per.data.dir

Required

false

Number of Alter Log Dir Threads

Description

Number of threads that the server uses to move data between log directories. The default value of this property is the same as the number of log directories.

Related Name

num.replica.alter.log.dirs.threads

Default Value

API Name

num.replica.alter.log.dirs.threads

Required

false

Ranger Kafka Plugin Conf Path

Description

Staging directory for Ranger Kafka Plugin Configuration. This should generally not be changed.

Related Name

ranger_kafka_plugin_conf_path

Default Value

/etc/ranger/kafka-plugin

API Name

ranger_kafka_plugin_conf_path

Required

true

Ranger Kafka Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kafka/audit/hdfs/spool

API Name

ranger_kafka_plugin_hdfs_audit_spool_directory

Required

true

Ranger Kafka Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kafka.policy.cache.dir

Default Value

/var/lib/ranger/kafka/policy-cache

API Name

ranger_kafka_plugin_policy_cache_directory

Required

true

Ranger Kafka Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kafka/audit/solr/spool

API Name

ranger_kafka_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kafka.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Inter Broker Protocol

Description

Protocol to be used for inter-broker communication. INFERRED uses the same protocol that is configured for external clients.

Related Name

security.inter.broker.protocol

Default Value

INFERRED

API Name

security.inter.broker.protocol

Required

false

Socket receive buffer size.

Description

The SO_RCVBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name

socket.receive.buffer.bytes

Default Value

100 KiB

API Name

socket.receive.buffer.bytes

Required

false

Socket receive buffer size.

Description

The maximum number of bytes in a socket request

Related Name

socket.request.max.bytes

Default Value

100 MiB

API Name

socket.request.max.bytes

Required

false

Socket send buffer size.

Description

The SO_SNDBUF buffer of the socket server sockets. If the value is -1, the OS default will be used.

Related Name

socket.send.buffer.bytes

Default Value

100 KiB

API Name

socket.send.buffer.bytes

Required

false

SSL Client Authentication

Description

Client authentication mode for SSL connections. This configuration has three valid values, "required", "requested" and "none". If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

Enable Zookeeper ACL

Description

Enables brokers to set SASL ACL on zookeeper nodes if authenticate.zookeeper.connection is enabled.

Related Name

zookeeper.set.acl

Default Value

true

API Name

zookeeper.set.acl

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Advertised Port

Description

The port to give out to producers, consumers, and other brokers to use in establishing connections. This only needs to be set if this port is different from the port the server should bind to.

Related Name

advertised.port

Default Value

API Name

advertised.port

Required

false

JMX Port

Description

Port for JMX.

Related Name

jmx_port

Default Value

9393

API Name

jmx_port

Required

false

HTTP Metric Report Port

Description

The port that the HTTP metric reporter listens on.

Related Name

kafka.http.metrics.port

Default Value

24042

API Name

kafka.http.metrics.port

Required

false

TCP Port

Description

Kafka broker port.

Related Name

port

Default Value

9092

API Name

port

Required

false

TLS/SSL Port

Description

Kafka broker secure port.

Related Name

ssl_port

Default Value

9093

API Name

ssl_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Kafka Broker TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Broker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Kafka Broker TLS/SSL Trust Store Password

Description

The password for the Kafka Broker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka Broker

Description

Encrypt communication between clients and Kafka Broker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka Broker TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Kafka Broker is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Kafka Broker TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Broker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Kafka Broker TLS/SSL Server Keystore File Password

Description

The password for the Kafka Broker keystore file.

Related Name

ssl.keystore.password.generator

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Advertised Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Host parameter.

Related Name

Default Value

false

API Name

role_config_suppression_advertised.host.name

Required

true

Suppress Parameter Validation: Advertised Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Advertised Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_advertised.port

Required

true

Suppress Parameter Validation: Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Broker Advanced Configuration Snippet (Safety Valve) for atlas-application.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_atlas-application.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Broker ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Broker ID parameter.

Related Name

Default Value

false

API Name

role_config_suppression_broker.id

Required

true

Suppress Parameter Validation: Additional Broker Java Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Broker Java Options parameter.

Related Name

Default Value

false

API Name

role_config_suppression_broker_java_opts

Required

true

Suppress Parameter Validation: Java Heap Size of Broker

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Broker parameter.

Related Name

Default Value

false

API Name

role_config_suppression_broker_max_heap_size

Required

true

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Name of User with Read-Write Access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with Read-Write Access to the JMX Agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Parameter Validation: Password of user with read-write access to the JMX agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of user with read-write access to the JMX agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Parameter Validation: Name of User with read-only access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Name of User with read-only access to the JMX Agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Parameter Validation: Password of User with read-only Access to the JMX agent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Password of User with read-only Access to the JMX agent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Parameter Validation: JMX Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the JMX Port parameter.

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_broker_unexpected_exits

Required

Kafka Connect

Advanced

Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

For advanced use only. A string to be inserted into connect-distributed.properties for this role only.

Related Name

Default Value

API Name

connect-distributed.properties_role_safety_valve

Required

false

Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KAFKA_CONNECT_role_env_safety_valve

Required

false

Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists,

it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Kafka Connect Log Directory

Description

The log directory for log files of the role Kafka Connect.

Related Name

kafka_connect.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka Connect Logging Threshold

Description

The minimum log level for Kafka Connect logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Kafka Connect Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka Connect logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Kafka Connect Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka Connect logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_connect_fd_thresholds

Required

false

Kafka Connect Host Health Test

Description

When computing the overall Kafka Connect health, consider the host's health.

Related Name

Default Value

true

API Name

kafka_connect_host_health_enabled

Required

false

Kafka Connect Process Health Test

Description

Enables the health test that the Kafka Connect's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

kafka_connect_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Bootstrap Servers

Description

A comma-separated list of IP:port or hostname:port pairs of the brokers that Kafka Connect should connect to. The brokers you specify here must be brokers that are running in the same cluster that Kafka Connect is deployed in. Cloudera recommends that you specify multiple brokers for high availability.

Related Name

bootstrap.servers

Default Value

API Name

bootstrap.servers

Required

true

Configuration Storage Topic Replication Factor

Description

Replication factor used when creating the configuration storage topic.

Related Name

config.storage.replication.factor

Default Value

1

API Name

config.storage.replication.factor

Required

true

Configuration Storage Topic Name

Description

The name of the Kafka topic which stores connector and task configurations.

Related Name

config.storage.topic

Default Value

connect-configs

API Name

config.storage.topic

Required

true

Cluster Group Id

Description

A unique name used to identify the Connect cluster group. The name specified here cannot conflict with consumer group IDs.

Related Name

group.id

Default Value

connect-cluster

API Name

group.id

Required

true

Include Connector Context In Logs

Description

If this is enabled, the log layout includes connector-specific and task-specific information in the log message, where appropriate. This makes it easier to identify those log messages that apply to a specific connector.

Related Name

include.connector.context

Default Value

true

API Name

include.connector.context

Required

false

Kafka Connect Configuration Directory

Description

Directory with all configurations for Kafka Connect daemons.

Related Name

kafka.connect.conf.directory

Default Value

$CONF_DIR

API Name

kafka.connect.conf.directory

Required

true

Java Home Path Override

Description

Java Home Path Override for Kafka Connect.

Related Name

kafka.connect.jdk.home

Default Value

API Name

kafka.connect.jdk.home

Required

false

Kafka Connect Heap Java Options

Description

Memory heap params while using Kafka Connect.

Related Name

KAFKA_HEAP_OPTS

Default Value

-Xms256M -Xmx2G

API Name

KAFKA_HEAP_OPTS

Required

false

Key Converter

Description

The key converter class used to convert between the Kafka Connect format and the serialized form that is written to Kafka. The key converter controls the format of the keys in the messages written to or read from Kafka. Since the key converter is independent of the connectors, it allows any connector to work with any serialization format. Examples of common formats include JSON and Avro.

Related Name

key.converter

Default Value

org.apache.kafka.connect.json.JsonConverter

API Name

key.converter

Required

true

Enable Key Converter Schema

Description

Enables the key converter to include schemas within each of the serialized keys.

Related Name

key.converter.schemas.enable

Default Value

true

API Name

key.converter.schemas.enable

Required

true

Jetty Metrics Port

Description

Jetty Metrics port to expose JMX Json.

Related Name

metrics.jetty.server.port

Default Value

28084

API Name

metrics.jetty.server.port

Required

true

Offset Flush Interval

Description

The interval, in milliseconds, at which Kafka Connect attempts to commit task offsets.

Related Name

offset.flush.interval.ms

Default Value

1 minute(s)

API Name

offset.flush.interval.ms

Required

true

Offset Storage Topic Replication Factor

Description

Replication factor used when creating the offset storage topic.

Related Name

offset.storage.replication.factor

Default Value

1

API Name

offset.storage.replication.factor

Required

true

Offset Storage Topic Name

Description

The name of the Kafka topic which stores connector offsets. If this topic does not exist, Kafka Connect will attempt to create it. Alternatively, you can also choose to create the topic manually before starting Kafka Connect.

Related Name

offset.storage.topic

Default Value

connect-offsets

API Name

offset.storage.topic

Required

true

Plugin Path

Description

Path to directories immediately containing jars with plugins and their dependencies, uber-jars with plugins and their dependencies and classes of plugins and their dependencies.

Related Name

plugin.path

Default Value

/var/lib/kafka

API Name

plugin.path

Required

false

Rest Extension Classes

Description

Comma-separated names of ConnectRestExtension classes, loaded and called in the order specified. Typically used to add custom capability like logging, security, etc.

Related Name

rest.extension.classes

Default Value

com.cloudera.dim.kafka.metrics.JmxJsonMetricsRestExtension

API Name

rest.extension.classes

Required

true

Kafka Connect Rest Port

Description

The port that the REST API listens on for connection requests. This port is used by Kafka Connect if TLS/SSL is disabled.

Related Name

rest.port

Default Value

28083

API Name

rest.port

Required

true

Secure Kafka Connect Rest Port

Description

The secure port that the REST API listens on for connection requests. This port is used by Kafka Connect if TLS/SSL is enabled.

Related Name

secure.rest.port

Default Value

28085

API Name

secure.rest.port

Required

true

SSL Client Authentication

Description

Client authentication mode for SSL connections. If set to "required", client authentication is required. If set to "requested", client authentication is requested and clients without certificates can still connect. If set to "none", which is the default value, no client authentication is required.

Related Name

ssl.client.auth

Default Value

none

API Name

ssl.client.auth

Required

false

Status Storage Topic Replication Factor

Description

Replication factor used when creating the offset storage topic.

Related Name

status.storage.replication.factor

Default Value

1

API Name

status.storage.replication.factor

Required

true

Status Storage Topic Name

Description

The name of the Kafka topic which stores connector and task status.

Related Name

status.storage.topic

Default Value

connect-status

API Name

status.storage.topic

Required

true

Value Converter

Description

The value converter class used to convert between the Kafka Connect format and the serialized form that is written to Kafka. The value converter controls the format of the values in the messages written to or read from Kafka. Since the value converter is independent of the connectors, it allows any connector to work with any serialization format. Examples of common formats include JSON and Avro.

Related Name

value.converter

Default Value

org.apache.kafka.connect.json.JsonConverter

API Name

value.converter

Required

true

Enable Value Converter Schema

Description

Enables the value converter to include schemas within each of the serialized values.

Related Name

value.converter.schemas.enable

Default Value

true

API Name

value.converter.schemas.enable

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Kafka Connect Prometheus Metrics Port

Description

Port for exposing Kafka Connect metrics as Prometheus metrics / OpenMetrics format.

Related Name

connect.prometheus.metrics.port

Default Value

28086

API Name

connect.prometheus.metrics.port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Kafka Connect TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka Connect might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Kafka Connect TLS/SSL Trust Store Password

Description

The password for the Kafka Connect TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka Connect

Description

Encrypt communication between clients and Kafka Connect using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka Connect TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Kafka Connect is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Kafka Connect TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka Connect is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Kafka Connect TLS/SSL Server Keystore File Password

Description

The password for the Kafka Connect keystore file.

Related Name

ssl.keystore.password.generator

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Bootstrap Servers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Bootstrap Servers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_bootstrap.servers

Required

true

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Configuration Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Configuration Storage Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

role_config_suppression_config.storage.replication.factor

Required

true

Suppress Parameter Validation: Configuration Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Configuration Storage Topic Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_config.storage.topic

Required

true

Suppress Parameter Validation: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_connect-distributed.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka Connect Prometheus Metrics Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Prometheus Metrics Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_connect.prometheus.metrics.port

Required

true

Suppress Parameter Validation: Cluster Group Id

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cluster Group Id parameter.

Related Name

Default Value

false

API Name

role_config_suppression_group.id

Required

true

Suppress Parameter Validation: Kafka Connect Configuration Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Configuration Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.conf.directory

Required

true

Suppress Parameter Validation: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.jdk.home

Required

true

Suppress Parameter Validation: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_connect_role_env_safety_valve

Required

true

Suppress Parameter Validation: Kafka Connect Heap Java Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Heap Java Options parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_heap_opts

Required

true

Suppress Parameter Validation: Key Converter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Converter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_key.converter

Required

true

Suppress Parameter Validation: Kafka Connect Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Kafka Connect Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Jetty Metrics Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Jetty Metrics Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.port

Required

true

Suppress Parameter Validation: Offset Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Storage Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

role_config_suppression_offset.storage.replication.factor

Required

true

Suppress Parameter Validation: Offset Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Storage Topic Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_offset.storage.topic

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Plugin Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Plugin Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_plugin.path

Required

true

Suppress Parameter Validation: Rest Extension Classes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Rest Extension Classes parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rest.extension.classes

Required

true

Suppress Parameter Validation: Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Rest Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rest.port

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Secure Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Kafka Connect Rest Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_secure.rest.port

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Kafka Connect TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Status Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Status Storage Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

role_config_suppression_status.storage.replication.factor

Required

true

Suppress Parameter Validation: Status Storage Topic Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Status Storage Topic Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_status.storage.topic

Required

true

Suppress Parameter Validation: Value Converter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Value Converter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_value.converter

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_connect_unexpected_exits

Required

true

Kafka MirrorMaker

Advanced

Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KAFKA_MIRROR_MAKER_role_env_safety_valve

Required

false

Kafka MirrorMaker Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties

Description

For advanced use only. A string to be inserted into mirror_maker_consumers.properties for this role only.

Related Name

Default Value

API Name

mirror_maker_consumers.properties_role_safety_valve

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties

Description

For advanced use only. A string to be inserted into mirror_maker_producers.properties for this role only.

Related Name

Default Value

API Name

mirror_maker_producers.properties_role_safety_valve

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties

Description

For advanced use only. A string to be inserted into ssl_client.properties for this role only.

Related Name

Default Value

API Name

ssl_client.properties_role_safety_valve

Required

false

Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties

Description

For advanced use only. A string to be inserted into ssl_server.properties for this role only.

Related Name

Default Value

API Name

ssl_server.properties_role_safety_valve

Required

false

Logs

Kafka MirrorMaker Log Directory

Description

The log directory for log files of the role Kafka MirrorMaker.

Related Name

kafka_mirrormaker.log4j.dir

Default Value

/var/log/kafka

API Name

log_dir

Required

false

Kafka MirrorMaker Logging Threshold

Description

The minimum log level for Kafka MirrorMaker logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Kafka MirrorMaker Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Kafka MirrorMaker logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Kafka MirrorMaker Max Log Size

Description

The maximum size, in megabytes, per log file for Kafka MirrorMaker logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kafka_mirror_maker_fd_thresholds

Required

false

Kafka MirrorMaker Host Health Test

Description

When computing the overall Kafka MirrorMaker health, consider the host's health.

Related Name

Default Value

true

API Name

kafka_mirror_maker_host_health_enabled

Required

false

Kafka MirrorMaker Process Health Test

Description

Enables the health test that the Kafka MirrorMaker's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

kafka_mirror_maker_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Abort on Send Failure

Description

Stop the entire mirror maker when a send failure occurs.

Related Name

abort.on.send.failure

Default Value

true

API Name

abort.on.send.failure

Required

false

Producer Batch Size

Description

This configuration controls the batch size in bytes. The producer will attempt to batch records together into fewer requests whenever multiple records are being sent to the same partition. This helps performance on both the client and the server.

Related Name

batch.size

Default Value

16 KiB

API Name

batch.size

Required

false

Destination Broker List

Description

Comma-separated list of IP:port (or hostname:port) pairs of brokers on destination cluster. This should be more than one, for high availability, but there's no need to list all brokers.

Related Name

bootstrap.servers

Default Value

API Name

bootstrap.servers

Required

true

Producer Buffer Memory

Description

The total bytes of memory the producer can use to buffer records waiting to be sent to the server.

Related Name

buffer.memory

Default Value

32 MiB

API Name

buffer.memory

Required

false

Producer Compression Type

Description

The compression type for all data generated by the producer.

Related Name

compression.type

Default Value

none

API Name

compression.type

Required

false

MirrorMaker Consumer Rebalance Listener

Description

A consumer rebalance listener of the ConsumerRebalanceListener type. Invoked when MirrorMaker's consumer rebalances.

Related Name

consumer.rebalance.listener

Default Value

API Name

consumer.rebalance.listener

Required

false

MirrorMaker Consumer Rebalance Listener Arguments

Description

Arguments used by MirrorMaker consumer rebalance listener.

Related Name

consumer.rebalance.listener.args

Default Value

API Name

consumer.rebalance.listener.args

Required

false

Consumer Request Timeout

Description

The maximum amount of time the consumer will wait for the response of a request. If the response is not received before the timeout elapses, the consumer will resend the request if necessary or fail the request if retries are exhausted.

Related Name

consumer.request.timeout.ms

Default Value

40 second(s)

API Name

consumer.request.timeout.ms

Required

false

Destination Kafka Cluster's Security Protocol

Description

Protocol used for communication with destination Kafka cluster.

Related Name

destination.security.protocol

Default Value

PLAINTEXT

API Name

destination.security.protocol

Required

false

Destination Kafka Cluster's Client Auth

Description

Only required if destination Kafka cluster requires client authentication.

Related Name

destination.ssl.client.auth

Default Value

false

API Name

destination.ssl.client.auth

Required

false

Consumer Minimum Fetch Size

Description

The minimum amount of data the server should return for a fetch request. If insufficient data is available, the request will wait for that much data to accumulate before answering the request. Setting this property to something greater than 1 will cause the server to wait for larger amounts of data to accumulate which can improve server throughput a bit at the cost of some additional latency.

Related Name

fetch.min.bytes

Default Value

1 B

API Name

fetch.min.bytes

Required

false

Consumer Group ID

Description

Name of the consumer group used by MirrorMaker. When multiple role instances are configured with the same topics and same group ID, the role instances load-balance replication for the topics. When multiple role instances are configured with the same topics but different group ID, each role instance replicates all the events for those topics - this can be used to replicate the source cluster into multiple destination clusters.

Related Name

group.id

Default Value

cloudera_mirrormaker

API Name

group.id

Required

false

Enable Authenticated Communication with the JMX Agent

Description

Enables Authenticated Communication with the JMX Agent.

Related Name

jmx.auth.enabled

Default Value

false

API Name

jmx.auth.enabled

Required

false

Name of User with Read-Write Access to the JMX Agent

Description

Specifies the name of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user

Default Value

controlRole

API Name

jmx.control.user

Required

false

Password of user with read-write access to the JMX agent

Description

Specifies the password of the user that has read-write privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.control.user.passwd

Default Value

API Name

jmx.control.user.passwd

Required

false

Name of User with read-only access to the JMX Agent

Description

Specifies the name of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user

Default Value

monitorRole

API Name

jmx.monitor.user

Required

false

Password of User with read-only Access to the JMX agent

Description

Specifies the password of the user that has read-only privileges when using password file-based authentication for JMX access. JMX authentication must be enabled for this setting to take effect.

Related Name

jmx.monitor.user.passwd

Default Value

API Name

jmx.monitor.user.passwd

Required

false

Enable TLS client authentication for JMX port

Description

If enabled, a valid client certificate must be presented by the JMX client in order to connect to the JMX port. Ensure that the trusted CA certificates are present in either the ZooKeeper JMX TLS/SSL Server Trust Store file or the global trust store.

Related Name

jmx.ssl.client.auth.enabled

Default Value

false

API Name

jmx.ssl.client.auth.enabled

Required

false

Enable TLS/SSL for Kafka JMX

Description

Encrypt communication between clients and Kafka JMX using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

jmx.ssl.enabled

Default Value

false

API Name

jmx.ssl.enabled

Required

false

Producer Linger Time

Description

The upper bound on the delay for batching. Once the producer gets a batch.size worth of records for a partition it will be sent immediately regardless of this setting. However, if fewer than this many

bytes accumulated for this partition the producer will 'linger' for the specified time waiting for more records to show up.

Related Name

linger.ms

Default Value

0 second(s)

API Name

linger.ms

Required

false

MirrorMaker Message Handler

Description

A MirrorMaker message handler of the MirrorMakerMessageHandler type that will process every record in-between producer and consumer.

Related Name

message.handler

Default Value

API Name

message.handler

Required

false

MirrorMaker Message Handler Arguments

Description

Arguments used by MirrorMaker message handler.

Related Name

message.handler.args

Default Value

API Name

message.handler.args

Required

false

Additional MirrorMaker Java Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

mirror_maker_java_opts

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC -Djava.awt.headless=true -

Djava.net.preferIPv4Stack=true -Dcom.sun.management.jmxremote.host=127.0.0.1 -Dcom.sun.management.jmxremote.local.only=true -Djava.rmi.server.hostname=127.0.0.1

API Name

mirror_maker_java_opts

Required

false

Java Heap Size of MirrorMaker

Description

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

Related Name

mirror_maker_max_heap_size

Default Value

1 GiB

API Name

mirror_maker_max_heap_size

Required

false

Number of Consumer Threads

Description

Number of consumer threads.

Related Name

num.streams

Default Value

1

API Name

num.streams

Required

false

Offset Commit Interval

Description

Offset commit interval in milliseconds.

Related Name

offset.commit.interval.ms

Default Value

60000

API Name

offset.commit.interval.ms

Required

false

Producer Request Timeout

Description

The maximum amount of time the producer will wait for the response of a request. If the response is not received before the timeout elapses, the producer will resend the request if necessary or fail the request if retries are exhausted.

Related Name

producer.request.timeout.ms

Default Value

30 second(s)

API Name

producer.request.timeout.ms

Required

false

Consumer Session Timeout

Description

The timeout used to detect failures when using the group management facilities of Kafka. When the heartbeat of a consumer is not received within the session timeout, the broker will mark the consumer as failed and rebalance the group. Note that the value must be in the allowable range as configured in the broker by group.min.session.timeout.ms and group.max.session.timeout.ms.

Related Name

session.timeout.ms

Default Value

30 second(s)

API Name

session.timeout.ms

Required

false

Source Broker List

Description

Comma-separated list of IP:port (or hostname:port) pairs of brokers on source cluster. This should be more than one, for high availability, but there's no need to list all brokers.

Related Name

source.bootstrap.servers

Default Value

API Name

source.bootstrap.servers

Required

true

Source Kafka Cluster's Security Protocol

Description

Protocol used for communication with source Kafka cluster.

Related Name

source.security.protocol

Default Value

PLAINTEXT

API Name

source.security.protocol

Required

false

Source Kafka Cluster's Client Auth

Description

Only required if the source Kafka cluster requires client authentication.

Related Name

source.ssl.client.auth

Default Value

false

API Name

source.ssl.client.auth

Required

false

Topic Whitelist

Description

Regular expression that represents a set of topics to mirror.

Related Name

whitelist

Default Value

API Name

whitelist

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

JMX Port

Description

Port for JMX.

Related Name

jmx_port

Default Value

9394

API Name

jmx_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Kafka MirrorMaker TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Kafka MirrorMaker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Kafka MirrorMaker TLS/SSL Trust Store Password

Description

The password for the Kafka MirrorMaker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password.generator

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Kafka MirrorMaker

Description

Encrypt communication between clients and Kafka MirrorMaker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Kafka MirrorMaker TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Kafka MirrorMaker is acting as a TLS/SSL server.

Related Name

ssl.key.password.generator

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Kafka MirrorMaker TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Kafka MirrorMaker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Kafka MirrorMaker TLS/SSL Server Keystore File Password

Description

The password for the Kafka MirrorMaker keystore file.

Related Name

ssl.keystore.password.generator

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Destination Broker List

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Destination Broker List parameter.

Related Name

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Source Broker List

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Source Broker List parameter.

Related Name

Default Value

false

API Name

role_config_suppression_source.bootstrap.servers

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server.properties_role_safety_valve

Required

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Kafka MirrorMaker TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka MirrorMaker TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Topic Whitelist

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topic Whitelist parameter.

Related Name

Default Value

false

API Name

role_config_suppression_whitelist

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_kafka_kafka_mirror_maker_unexpected_exits

Required

true

Service-Wide

Advanced

Kafka Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

KAFKA_service_env_safety_valve

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

kafka

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

kafka

API Name

process_username

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Kafka Broker Monitoring Thresholds

Description

The health test thresholds of the overall Kafka Broker health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Brokers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Brokers falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

KAFKA_KAFKA_BROKER_healthy_thresholds

Required

false

Healthy Kafka Connect Monitoring Thresholds

Description

The health test thresholds of the overall Kafka Connect health. The check returns "Concerning" health if the percentage of "Healthy" Kafka Connects falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Kafka Connects falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

KAFKA_KAFKA_CONNECT_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Other

Atlas metadata namespace for Kafka Clients

Description

Metadata Namespace used in Atlas for Kafka clients (Producers, Consumers). It may be different from the topic namespace when clients used across clusters.

Related Name

atlas.metadata.namespace.client

Default Value

cm

API Name

atlas.metadata.namespace.client

Required

false

Atlas metadata namespace for Kafka Topics

Description

Metadata Namespace used in Atlas for Kafka topics.

Related Name

atlas.metadata.namespace.topic

Default Value

cm

API Name

atlas.metadata.namespace.topic

Required

false

Topic Auto Creation

Description

Enables auto creation of topics on the server. If set to true, it attempts to produce, consume, or fetch metadata for a non-existent topic automatically create the topic with the default replication factor and number of partitions.

Related Name

auto.create.topics.enable

Default Value

true

API Name

auto.create.topics.enable

Required

false

Enable Automatic Leader Rebalancing

Description

If automatic leader rebalancing is enabled, the controller tries to balance leadership for partitions among the brokers by periodically returning leadership for each partition to the preferred replica, if that replica is available.

Related Name

auto.leader.rebalance.enable

Default Value

true

API Name

auto.leader.rebalance.enable

Required

false

Enable Controlled Shutdown

Description

Enables controlled shutdown of the broker. If enabled, the broker moves all leaders on it to other brokers before shutting itself down. This reduces the unavailability window during shutdown.

Related Name

controlled.shutdown.enable

Default Value

true

API Name

controlled.shutdown.enable

Required

false

Controlled Shutdown Maximum Attempts

Description

Number of unsuccessful controlled shutdown attempts before executing an unclean shutdown. For example, the default value of 3 means that the system will attempt a controlled shutdown 3 times before executing an unclean shutdown.

Related Name

controlled.shutdown.max.retries

Default Value

3

API Name

controlled.shutdown.max.retries

Required

false

Default Replication Factor

Description

The default replication factor for automatically created topics.

Related Name

default.replication.factor

Default Value

1

API Name

default.replication.factor

Required

false

Enable Delegation Tokens

Description

Enables authentication with delegation tokens for this Kafka service. When enabled, a secure password is automatically generated and used as the "delegation.token.master.key" property for Kafka Brokers. Only allowed if Kerberos authentication is enabled.

Related Name

delegation.token.enable

Default Value

true

API Name

delegation.token.enable

Required

false

Delegation Token Expiry Time

Description

The expiry time of a delegation token. A delegation token can be renewed before its expiry time to extend its validity up to its maximum lifetime. If it is not renewed, it will expire even if it has time remaining from its maximum lifetime.

Related Name

delegation.token.expiry.time.ms

Default Value

1 day(s)

API Name

delegation.token.expiry.time.ms

Required

false

Delegation Token Maximum Lifetime

Description

The maximum amount of time that a delegation token can be valid for.

Related Name

delegation.token.max.lifetime.ms

Default Value

7 day(s)

API Name

delegation.token.max.lifetime.ms

Required

false

Enable Delete Topic

Description

Enables topic deletion using admin tools. When delete topic is disabled, deleting topics through the admin tools has no effect.

Related Name

delete.topic.enable

Default Value

true

API Name

delete.topic.enable

Required

false

Consumer Group Maximum Session Timeout

Description

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

Related Name

group.max.session.timeout.ms

Default Value

30 minute(s)

API Name

group.max.session.timeout.ms

Required

false

Consumer Group Minimum Session Timeout

Description

The minimum allowed session timeout for registered consumers. Shorter timeouts result in quicker failure detection at the cost of more frequent consumer heartbeating, which can overwhelm broker resources.

Related Name

group.min.session.timeout.ms

Default Value

6 second(s)

API Name

group.min.session.timeout.ms

Required

false

HDFS Service

Description

Name of the HDFS service that this Kafka service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

false

Enable Kafka Decommission

Description

Kafka decommission flag only takes affect when there is no Cruise Control. In other case the decommission will be always enabled.

Related Name

kafka.decommission.hook.enabled

Default Value

false

API Name

kafka.decommission.hook.enabled

Required

false

List of Metric Reporters

Description

List of metric reporter class names. HTTP reporter is included by default.

Related Name

kafka.metrics.reporters

Default Value

nl.techop.kafka.KafkaHttpMetricsReporter

API Name

kafka.metrics.reporters

Required

false

Enable Kerberos Authentication

Description

Enables Kerberos authentication for this Kafka service.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

LDAP URL

Description

The URL of LDAP for authenticating Kafka clients.

Related Name

ldap.auth.url

Default Value

API Name

ldap.auth.url

Required

false

LDAP User DN Template

Description

The LDAP user DN template for authenticating Kafka clients.

Related Name

ldap.auth.user.dn.template

Default Value

API Name

ldap.auth.user.dn.template

Required

false

Leader Imbalance Check Interval

Description

Defines the frequency of leader imbalance checks.

Related Name

leader.imbalance.check.interval.seconds

Default Value

5 minute(s)

API Name

leader.imbalance.check.interval.seconds

Required

false

Leader Imbalance Allowed Per Broker

Description

The percentage of leader imbalance allowed per broker. The controller rebalances leadership if the leader imbalance ratio goes above the configured value per broker.

Related Name

leader.imbalance.per.broker.percentage

Default Value

10 %

API Name

leader.imbalance.per.broker.percentage

Required

false

Log Cleaner Deduplication Buffer Size

Description

The total memory used for log deduplication across all cleaner threads. This memory is statically allocated and will not cause GC problems.

Related Name

log.cleaner.dedupe.buffer.size

Default Value

128 MiB

API Name

log.cleaner.dedupe.buffer.size

Required

false

Log Compaction Delete Record Retention Time

Description

The amount of time to retain delete messages for log compacted topics. Once a consumer has seen an original message, it has to be ensured that it also sees the delete message. If the delete message is removed too quickly, this might not happen. The configurable delete retention time helps to circumvent this issue.

Related Name

log.cleaner.delete.retention.ms

Default Value

7 day(s)

API Name

log.cleaner.delete.retention.ms

Required

false

Enable Log Compaction

Description

Enables the log cleaner to compact topics with cleanup.policy=compact on this cluster.

Related Name

log.cleaner.enable

Default Value

true

API Name

log.cleaner.enable

Required

false

Log Cleaner Clean Ratio

Description

Controls how frequently the log cleaner will attempt to clean the log. This ratio restricts the maximum space wasted by duplicates in the log. For example, if set to 0.5, then at most 50% of the log can be populated by duplicates. A higher ratio results in fewer, more efficient cleaning processes, but more wasted space in the log.

Related Name

log.cleaner.min.cleanable.ratio

Default Value

0.5

API Name

log.cleaner.min.cleanable.ratio

Required

false

Number of Log Cleaner Threads

Description

The number of background threads used for log cleaning.

Related Name

log.cleaner.threads

Default Value

1

API Name

log.cleaner.threads

Required

false

Log Flush Message Interval

Description

The number of messages written to a log partition before triggering an fsync on the log. Setting this property to a low value results in more frequent data to disk synchronization, but also has major impact on performance. For durability, Cloudera recommends the use of replication rather than depending on a single-server fsync. However, this setting can be used as an extra safety measure. If used in conjunction with log.flush.interval.ms, the log is flushed when either criteria is met.

Related Name

log.flush.interval.messages

Default Value

API Name

log.flush.interval.messages

Required

false

Log Flush Time Interval

Description

The maximum time between fsync calls on the log. If used in conjunction with log.flush.interval.messages, the log is flushed when either criteria is met.

Related Name

log.flush.interval.ms

Default Value

API Name

log.flush.interval.ms

Required

false

Log Flush Scheduler Interval

Description

The frequency, in milliseconds, with which the log flusher checks whether any log is eligible to be flushed to disk.

Related Name

log.flush.scheduler.interval.ms

Default Value

API Name

log.flush.scheduler.interval.ms

Required

false

Maximum Message Size

Description

The maximum size of a message that the server can receive. This property has to be in sync with the maximum fetch size the consumers use. Otherwise, an unruly producer could publish messages that are too large for consumption.

Related Name

message.max.bytes

Default Value

1000000 B

API Name

message.max.bytes

Required

false

Minimum Number of Replicas in ISR

Description

The minimum number of replicas in the in-sync replica needed to satisfy a produce request where required.acks=-1 (that is, all).

Related Name

min.insync.replicas

Default Value

1

API Name

min.insync.replicas

Required

false

Enable Kafka Monitoring

Description

Enables Kafka monitoring.

Related Name

monitoring.enabled

Default Value

true

API Name

monitoring.enabled

Required

false

Default Number of Partitions

Description

The default number of partitions for automatically created topics.

Related Name

num.partitions

Default Value

1

API Name

num.partitions

Required

false

Number of Replica Fetchers

Description

Number of threads used to replicate messages from leaders. Increasing this value increases the degree of I/O parallelism in the follower broker.

Related Name

num.replica.fetchers

Default Value

4

API Name

num.replica.fetchers

Required

false

Offset Retention Time

Description

After a consumer group loses all its consumers (i.e. becomes empty) its offsets will be kept for this retention period before getting discarded. For standalone consumers (using manual assignment), offsets will be expired after the time of last commit plus this retention period.

Related Name

offsets.retention.minutes

Default Value

7 day(s)

API Name

offsets.retention.minutes

Required

false

Offset Commit Topic Number of Partitions

Description

The number of partitions for the offset commit topic. Changing this value after deployment is currently unsupported, therefore, Cloudera recommends using a higher number of partitions (for example, 100-200) for production.

Related Name

offsets.topic.num.partitions

Default Value

50

API Name

offsets.topic.num.partitions

Required

false

Offset Commit Topic Replication Factor

Description

The replication factor for the offset commit topic. A higher setting (for example, 3 or 4) is recommended in order to ensure higher availability. If the offsets topic is created when there are fewer brokers than the replication factor, then the offsets topic is created with fewer replicas.

Related Name

offsets.topic.replication.factor

Default Value

3

API Name

offsets.topic.replication.factor

Required

false

PAM Service

Description

The PAM service name for authenticating Kafka clients. This corresponds to the service name in the PAM configuration.

Related Name

pam.auth.service

Default Value

login

API Name

pam.auth.service

Required

false

Enable Producer Metrics

Description

Enables producer metrics

Related Name

producer.metrics.enable

Default Value

true

API Name

producer.metrics.enable

Required

false

Default Consumer Quota

Description

Any consumer distinguished by clientId/consumer group will get throttled if it fetches more bytes than this value per-second.

Related Name

quota.consumer.default

Default Value

API Name

quota.consumer.default

Required

false

Default Producer Quota

Description

Any producer distinguished by clientId will get throttled if it produces more bytes than this value per-second.

Related Name

quota.producer.default

Default Value

API Name

quota.producer.default

Required

false

Ranger Kafka Plugin Hdfs Audit Directory

Description

The DFS path on which Ranger audits are written.

Related Name

ranger_kafka_plugin_hdfs_audit_directory

Default Value

$ranger_base_audit_url/kafka

API Name

ranger_kafka_plugin_hdfs_audit_directory

Required

false

'Ranger service' name for this Kafka service

Description

Name of the 'Ranger service', that is used for authorization by this Kafka service. If this parameter is set to the placeholder value '{{GENERATED_RANGER_SERVICE_NAME}}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kafka service. The name can consist of alphanumeric and '_' characters.

Related Name

ranger.plugin.kafka.service.name

Default Value

cm_kafka

API Name

ranger_plugin_kafka_service_name

Required

false

RANGER Service

Description

Name of the RANGER service that this Kafka service instance depends on

Related Name

Default Value

API Name

ranger_service

Required

false

Replica Maximum Fetch Size

Description

The maximum number of bytes to fetch for each partition in fetch requests that replicas send to the leader. This value should be larger than message.max.bytes.

Related Name

replica.fetch.max.bytes

Default Value

1 MiB

API Name

replica.fetch.max.bytes

Required

false

Allowed Replica Time Lag

Description

If a follower has not sent any fetch requests, nor has it consumed up to the leader's log end offset during this time, the leader removes the follower from the ISR set.

Related Name

replica.lag.time.max.ms

Default Value

30 second(s)

API Name

replica.lag.time.max.ms

Required

false

SASL/PLAIN Authentication

Description

Authentication method that the SASL/PLAIN mechanism uses to authenticate clients.

Related Name

sasl.plain.auth

Default Value

none

API Name

sasl.plain.auth

Required

false

Minimum Number of Replicas in ISR for Transaction State Log

Description

Overridden min.insync.replicas config for the transaction topic.

Related Name

transaction.state.log.min.isr

Default Value

2

API Name

transaction.state.log.min.isr

Required

false

Transaction State Log Replication Factor

Description

The replication factor for the transaction topic (set higher to ensure availability). Internal topic creation will fail until the cluster size meets this replication factor requirement.

Related Name

transaction.state.log.replication.factor

Default Value

3

API Name

transaction.state.log.replication.factor

Required

false

Enable Unclean Leader Election

Description

Enables replicas not in the ISR set to be elected as leader as a last resort, even though doing so might result in data loss.

Related Name

unclean.leader.election.enable

Default Value

false

API Name

unclean.leader.election.enable

Required

false

ZooKeeper Root

Description

The znode in ZooKeeper used as a root for this Kafka cluster. WARNING: Do not change this property following the initial launch of the Kafka service. Only configure this property during the initial setup phase, before starting the Kafka service for the first time. Updating the root znode on a Kafka service that has already been started does not copy over the original znodes to the new root. This causes Kafka to lose its operational metadata.

Related Name

zookeeper.chroot

Default Value

/kafka

API Name

zookeeper.chroot

Required

false

Enable Secure Connection to ZooKeeper

Description

Enables SSL/TLS for all connections to ZooKeeper. This applies only if 'Enable TLS/SSL for ZooKeeper' is enabled on the ZooKeeper service.

Related Name

zookeeper.secure.connection.enable

Default Value

true

API Name

zookeeper.secure.connection.enable

Required

false

ZooKeeper Session Timeout

Description

If the server fails to send a heartbeat to ZooKeeper within this period of time, it is considered dead. If set to a too low value, ZooKeeper might falsely consider a server dead. If set to a too high value, ZooKeeper might take too long to recognize a dead server.

Related Name

zookeeper.session.timeout.ms

Default Value

18 second(s)

API Name

zookeeper.session.timeout.ms

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Kafka service instance depends on

Related Name

Default Value

API Name

zookeeper_service

Required

true

Security

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name

Default Value

kafka

API Name

kerberos_princ_name

Required

true

Suppressions

Suppress Configuration Validator: Advertised Host

Description

Whether to suppress configuration warnings produced by the Advertised Host configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_advertised.host.name

Required

true

Suppress Configuration Validator: Advertised Port

Description

Whether to suppress configuration warnings produced by the Advertised Port configuration validator.

Related Name

Suppress Configuration Validator: Configuration Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the Configuration Storage Topic Replication Factor configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_config.storage.replication.factor

Required

true

Suppress Configuration Validator: Configuration Storage Topic Name

Description

Whether to suppress configuration warnings produced by the Configuration Storage Topic Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_config.storage.topic

Required

true

Suppress Configuration Validator: Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties

Description

Whether to suppress configuration warnings produced by the Kafka Connect Advanced Configuration Snippet (Safety Valve) for connect-distributed.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_connect-distributed.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Prometheus Metrics Port

Description

Whether to suppress configuration warnings produced by the Kafka Connect Prometheus Metrics Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_connect.prometheus.metrics.port

Required

true

Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener

Description

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_consumer.rebalance.listener

Required

true

Suppress Configuration Validator: MirrorMaker Consumer Rebalance Listener Arguments

Description

Whether to suppress configuration warnings produced by the MirrorMaker Consumer Rebalance Listener Arguments configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_consumer.rebalance.listener.args

Required

true

Suppress Configuration Validator: Consumer Group ID

Description

Whether to suppress configuration warnings produced by the Consumer Group ID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_group.id

Required

true

Suppress Configuration Validator: Name of User with Read-Write Access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the Name of User with Read-Write Access to the JMX Agent configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.control.user

Required

true

Suppress Configuration Validator: Password of user with read-write access to the JMX agent

Description

Whether to suppress configuration warnings produced by the Password of user with read-write access to the JMX agent configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.control.user.passwd

Required

true

Suppress Configuration Validator: Name of User with read-only access to the JMX Agent

Description

Whether to suppress configuration warnings produced by the Name of User with read-only access to the JMX Agent configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user

Required

true

Suppress Configuration Validator: Password of User with read-only Access to the JMX agent

Description

Whether to suppress configuration warnings produced by the Password of User with read-only Access to the JMX agent configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx.monitor.user.passwd

Required

true

Suppress Configuration Validator: JMX Port

Description

Whether to suppress configuration warnings produced by the JMX Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_jmx_port

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf

Description

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-client.conf configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-conf/kafka-client.conf_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties

Description

Whether to suppress configuration warnings produced by the Kafka Client Advanced Configuration Snippet (Safety Valve) for kafka-conf/kafka-ranger-repo.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-conf/kafka-ranger-repo.properties_client_config_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka-monitoring.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka-monitoring.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Configuration Directory

Description

Whether to suppress configuration warnings produced by the Kafka Connect Configuration Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.conf.directory

Required

true

Suppress Configuration Validator: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.jdk.home

Required

true

Suppress Configuration Validator: HTTP Metric Report Host

Description

Whether to suppress configuration warnings produced by the HTTP Metric Report Host configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.host

Required

true

Suppress Configuration Validator: HTTP Metric Report Password

Description

Whether to suppress configuration warnings produced by the HTTP Metric Report Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.password

Required

true

Suppress Configuration Validator: HTTP Metric Report Port

Description

Whether to suppress configuration warnings produced by the HTTP Metric Report Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.port

Required

true

Suppress Configuration Validator: HTTP Metric Report User

Description

Whether to suppress configuration warnings produced by the HTTP Metric Report User configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.http.metrics.user

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for kafka.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka Broker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_broker_role_env_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka Connect Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_connect_role_env_safety_valve

Required

true

Suppress Configuration Validator: Kafka Connect Heap Java Options

Description

Whether to suppress configuration warnings produced by the Kafka Connect Heap Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_heap_opts

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka_mirror_maker_role_env_safety_valve

Required

true

Suppress Configuration Validator: Key Converter

Description

Whether to suppress configuration warnings produced by the Key Converter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_key.converter

Required

true

Suppress Configuration Validator: Data Directories

Description

Whether to suppress configuration warnings produced by the Data Directories configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log.dirs

Required

true

Suppress Configuration Validator: Segment File Size

Description

Whether to suppress configuration warnings produced by the Segment File Size configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log.segment.bytes

Required

true

Suppress Configuration Validator: Kafka Broker Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Kafka Broker Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Log Directory

Description

Whether to suppress configuration warnings produced by the Kafka Broker Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: MirrorMaker Message Handler

Description

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_message.handler

Required

true

Suppress Configuration Validator: MirrorMaker Message Handler Arguments

Description

Whether to suppress configuration warnings produced by the MirrorMaker Message Handler Arguments configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_message.handler.args

Required

true

Suppress Configuration Validator: Jetty Metrics Port

Description

Whether to suppress configuration warnings produced by the Jetty Metrics Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.jetty.server.port

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_consumers.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_consumers.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Additional MirrorMaker Java Options

Description

Whether to suppress configuration warnings produced by the Additional MirrorMaker Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_java_opts

Required

true

Suppress Configuration Validator: Java Heap Size of MirrorMaker

Description

Whether to suppress configuration warnings produced by the Java Heap Size of MirrorMaker configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_max_heap_size

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for mirror_maker_producers.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_mirror_maker_producers.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Number of I/O Threads

Description

Whether to suppress configuration warnings produced by the Number of I/O Threads configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_num.io.threads

Required

true

Suppress Configuration Validator: Number of Network Threads

Description

Whether to suppress configuration warnings produced by the Number of Network Threads configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_num.network.threads

Required

true

Suppress Configuration Validator: Number of Recovery Threads per data directory

Description

Whether to suppress configuration warnings produced by the Number of Recovery Threads per data directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_num.recovery.threads.per.data.dir

Required

true

Suppress Configuration Validator: Number of Alter Log Dir Threads

Description

Whether to suppress configuration warnings produced by the Number of Alter Log Dir Threads configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_num.replica.alter.log.dirs.threads

Required

true

Suppress Configuration Validator: Offset Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the Offset Storage Topic Replication Factor configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_offset.storage.replication.factor

Required

true

Suppress Configuration Validator: Offset Storage Topic Name

Description

Whether to suppress configuration warnings produced by the Offset Storage Topic Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_offset.storage.topic

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Plugin Path

Description

Whether to suppress configuration warnings produced by the Plugin Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_plugin.path

Required

true

Suppress Configuration Validator: TCP Port

Description

Whether to suppress configuration warnings produced by the TCP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_port

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-security.xml_role_safety_valve

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Conf Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_plugin_conf_path

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_plugin_hdfs_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Policy Cache Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger Kafka Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Kafka Plugin Audit Solr Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kafka_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Rest Extension Classes

Description

Whether to suppress configuration warnings produced by the Rest Extension Classes configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rest.extension.classes

Required

true

Suppress Configuration Validator: Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the Kafka Connect Rest Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rest.port

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Secure Kafka Connect Rest Port

Description

Whether to suppress configuration warnings produced by the Secure Kafka Connect Rest Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_secure.rest.port

Required

true

Suppress Configuration Validator: Source Broker List

Description

Whether to suppress configuration warnings produced by the Source Broker List configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_source.bootstrap.servers

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for ssl.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_client.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: TLS/SSL Port

Description

Whether to suppress configuration warnings produced by the TLS/SSL Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_port

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Advanced Configuration Snippet (Safety Valve) for ssl_server.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server.properties_role_safety_valve

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore Key Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Kafka Broker TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Kafka Broker TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Status Storage Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the Status Storage Topic Replication Factor configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_status.storage.replication.factor

Required

true

Suppress Configuration Validator: Status Storage Topic Name

Description

Whether to suppress configuration warnings produced by the Status Storage Topic Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_status.storage.topic

Required

true

Suppress Configuration Validator: Value Converter

Description

Whether to suppress configuration warnings produced by the Value Converter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_value.converter

Required

true

Suppress Configuration Validator: Topic Whitelist

Description

Whether to suppress configuration warnings produced by the Topic Whitelist configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_whitelist

Required

true

Suppress Configuration Validator: Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties

Description

Whether to suppress configuration warnings produced by the Kafka Broker Advanced Configuration Snippet (Safety Valve) for zookeeper-ssl.properties configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_zookeeper-ssl.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Atlas metadata namespace for Kafka Clients

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas metadata namespace for Kafka Clients parameter.

Related Name

Default Value

false

API Name

service_config_suppression_atlas.metadata.namespace.client

Required

true

Suppress Parameter Validation: Atlas metadata namespace for Kafka Topics

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas metadata namespace for Kafka Topics parameter.

Related Name

Default Value

false

API Name

service_config_suppression_atlas.metadata.namespace.topic

Required

true

Suppress Parameter Validation: Controlled Shutdown Maximum Attempts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Controlled Shutdown Maximum Attempts parameter.

Related Name

Default Value

false

API Name

service_config_suppression_controlled.shutdown.max.retries

Required

true

Suppress Parameter Validation: Default Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Replication Factor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_default.replication.factor

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: List of Metric Reporters

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the List of Metric Reporters parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kafka.metrics.reporters

Required

true

Suppress Configuration Validator: Kafka Broker Count Validator

Description

Whether to suppress configuration warnings produced by the Kafka Broker Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_broker_count_validator

Required

true

Suppress Configuration Validator: Kafka Connect Count Validator

Description

Whether to suppress configuration warnings produced by the Kafka Connect Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_connect_count_validator

Required

true

Suppress Configuration Validator: Kafka MirrorMaker Count Validator

Description

Whether to suppress configuration warnings produced by the Kafka MirrorMaker Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_mirror_maker_count_validator

Required

true

Suppress Parameter Validation: Kafka Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kafka_service_env_safety_valve

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ldap.auth.url

Required

true

Suppress Parameter Validation: LDAP User DN Template

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP User DN Template parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ldap.auth.user.dn.template

Required

true

Suppress Parameter Validation: Leader Imbalance Check Interval

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Check Interval parameter.

Related Name

Default Value

false

API Name

service_config_suppression_leader.imbalance.check.interval.seconds

Required

true

Suppress Parameter Validation: Leader Imbalance Allowed Per Broker

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Leader Imbalance Allowed Per Broker parameter.

Related Name

Default Value

false

API Name

service_config_suppression_leader.imbalance.per.broker.percentage

Required

true

Suppress Parameter Validation: Maximum Message Size

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Message Size parameter.

Related Name

Default Value

false

API Name

service_config_suppression_message.max.bytes

Required

true

Suppress Parameter Validation: Minimum Number of Replicas in ISR

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Minimum Number of Replicas in ISR parameter.

Related Name

Default Value

false

API Name

service_config_suppression_min.insync.replicas

Required

true

Suppress Parameter Validation: Default Number of Partitions

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Number of Partitions parameter.

Related Name

Default Value

false

API Name

service_config_suppression_num.partitions

Required

true

Suppress Parameter Validation: Number of Replica Fetchers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Replica Fetchers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_num.replica.fetchers

Required

true

Suppress Parameter Validation: Offset Commit Topic Number of Partitions

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Number of Partitions parameter.

Related Name

Default Value

false

API Name

service_config_suppression_offsets.topic.num.partitions

Required

true

Suppress Parameter Validation: Offset Commit Topic Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Offset Commit Topic Replication Factor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_offsets.topic.replication.factor

Required

true

Suppress Parameter Validation: PAM Service

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the PAM Service parameter.

Related Name

Default Value

false

API Name

service_config_suppression_pam.auth.service

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Kafka Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Kafka Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kafka_plugin_hdfs_audit_directory

Required

true

Suppress Parameter Validation: 'Ranger service' name for this Kafka service

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the 'Ranger service' name for this Kafka service parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_plugin_kafka_service_name

Required

true

Suppress Parameter Validation: Replica Maximum Fetch Size

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replica Maximum Fetch Size parameter.

Related Name

Default Value

false

API Name

service_config_suppression_replica.fetch.max.bytes

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Transaction State Log Replication Factor

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Transaction State Log Replication Factor parameter.

Related Name

Default Value

false

API Name

service_config_suppression_transaction.state.log.replication.factor

Required

true

Suppress Parameter Validation: ZooKeeper Root

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Root parameter.

Related Name

Default Value

false

API Name

service_config_suppression_zookeeper.chroot

Required

true

Suppress Parameter Validation: ZooKeeper Session Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Session Timeout parameter.

Related Name

Default Value

false

API Name

service_config_suppression_zookeeper.session.timeout.ms

Required

true

Suppress Health Test: Kafka Broker Health

Description

Whether to suppress the results of the Kafka Broker Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_kafka_kafka_broker_healthy

Required

true

Suppress Health Test: Kafka Connect Health

Description

Whether to suppress the results of the Kafka Connect Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_kafka_kafka_connect_healthy

Required

true

Key Trustee Server Properties in Cloudera Runtime 7.2.15

Role groups:

Active Database

Advanced

Active Database Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

DB_ACTIVE_role_env_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Monitoring

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

db_active_fd_thresholds

Required

false

Active Database Host Health Test

Description

When computing the overall Active Database health, consider the host's health.

Related Name

Default Value

true

API Name

db_active_host_health_enabled

Required

false

Active Database Process Health Test

Description

Enables the health test that the Active Database's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

db_active_scm_health_enabled

Required

false

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Active Key Trustee Server

Advanced

Active Key Trustee Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KEYTRUSTEE_ACTIVE_SERVER_role_env_safety_valve

Required

false

Active Key Trustee Server XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Active Key Trustee Server, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value

API Name

logback_safety_valve

Required

false

Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf

Description

For advanced use only. A string to be inserted into logging.conf for this role only.

Related Name

Default Value

API Name

logging.conf_role_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

keytrustee_active_server_fd_thresholds

Required

false

Active Key Trustee Server Host Health Test

Description

When computing the overall Active Key Trustee Server health, consider the host's health.

Related Name

Default Value

true

API Name

keytrustee_active_server_host_health_enabled

Required

false

Active Key Trustee Server Process Health Test

Description

Enables the health test that the Active Key Trustee Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

keytrustee_active_server_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Suppress Parameter Validation: Active Key Trustee Server Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Active Key Trustee Server XML Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server XML Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for logging.conf parameter.

Related Name

Default Value

false

API Name

role_config_suppression_logging.conf_role_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server CA Certificate (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_ca_certificate_location

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Certificate File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_certificate_location

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Server Private Key File (PEM Format) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Parameter Validation: Active Key Trustee Server TLS/SSL Private Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Active Key Trustee Server TLS/SSL Private Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_keytrustee_active_server_unexpected_exits

Required

true

Passive Database

Advanced

Passive Database Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

DB_PASSIVE_role_env_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Monitoring

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

db_passive_fd_thresholds

Required

false

Passive Database Host Health Test

Description

When computing the overall Passive Database health, consider the host's health.

Related Name

Default Value

true

API Name

db_passive_host_health_enabled

Required

false

Passive Database Process Health Test

Description

Enables the health test that the Passive Database's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

db_passive_scm_health_enabled

Required

false

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Database Storage Directory

Description

Directory (local file system) where the Key Trustee Server database will be stored. Changing this value after the service has been started will have no effect.

Related Name

db_root

Default Value

/var/lib/keytrustee/db

API Name

db_root

Required

false

Retry Attempts

Description

Number of times a connection attempt will be made before giving up.

Related Name

retry_attempts

Default Value

30

API Name

retry_attempts

Required

true

Retry Timeout

Description

Number of secconds to wait between retries.

Related Name

retry_timeout

Default Value

1 second(s)

API Name

retry_timeout

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Key Trustee Server Database Port

Description

The Key Trustee Server database server port. Changing this value after the service has been started will have no effect.

Related Name

db_port

Default Value

11381

API Name

db_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Passive Database Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Passive Database Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_db_passive_role_env_safety_valve

Required

true

Suppress Parameter Validation: Key Trustee Server Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Key Trustee Server Database Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_db_port

Required

true

Suppress Parameter Validation: Database Storage Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Database Storage Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_db_root

Required

true

Suppress Parameter Validation: Retry Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Retry Timeout parameter.

Related Name

Default Value

false

API Name

role_config_suppression_retry_timeout

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_keytrustee_server_db_passive_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

Passive Key Trustee Server Advanced Configuration Snippet (Safety Valve) for ssl.properties

Description

For advanced use only. A string to be inserted into ssl.properties for this role only.

Related Name

Default Value

API Name

ssl.properties_role_safety_valve

Required

false

Logs

Passive Key Trustee Server Log Directory

Description

The log directory for log files of the role Passive Key Trustee Server.

Related Name

log_dir

Default Value

/var/lib/keytrustee/logs

API Name

log_dir

Required

false

Passive Key Trustee Server Logging Threshold

Description

The minimum log level for Passive Key Trustee Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Passive Key Trustee Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Passive Key Trustee Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Passive Key Trustee Server Max Log Size

Description

The maximum size, in megabytes, per log file for Passive Key Trustee Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

keytrustee_passive_server_fd_thresholds

Required

false

Passive Key Trustee Server Host Health Test

Description

When computing the overall Passive Key Trustee Server health, consider the host's health.

Related Name

Default Value

true

API Name

keytrustee_passive_server_host_health_enabled

Required

false

Passive Key Trustee Server Process Health Test

Description

Enables the health test that the Passive Key Trustee Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

keytrustee_passive_server_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Key Trustee Server Port

Description

The Key Trustee Server port number.

Related Name

keytrustee_port

Default Value

11371

API Name

keytrustee_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Passive Key Trustee Server TLS/SSL Server CA Certificate (PEM Format)

Description

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

ssl.cacert.location

Default Value

API Name

ssl_server_ca_certificate_location

Required

false

Passive Key Trustee Server TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl.cert.location

Default Value

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee.pem

API Name

ssl_server_certificate_location

Required

false

Passive Key Trustee Server TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Passive Key Trustee Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

ssl.privatekey.location

Default Value

/var/lib/keytrustee/.keytrustee/.ssl/ssl-cert-keytrustee-pk.pem

API Name

ssl_server_privatekey_location

Required

false

Passive Key Trustee Server TLS/SSL Private Key Password

Description

The password for the private key in the Passive Key Trustee Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

ssl.privatekey.password

Default Value

API Name

ssl_server_privatekey_password

Required

false

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

HBase Indexer Log Directory

Description

Directory where HBase Indexer will place its log files.

Related Name

Default Value

/var/log/hbase-solr

API Name

hbase_indexer_log_dir

Required

true

Lily HBase Indexer Logging Threshold

Description

The minimum log level for Lily HBase Indexer logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Lily HBase Indexer Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Lily HBase Indexer logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Lily HBase Indexer Max Log Size

Description

The maximum size, in megabytes, per log file for Lily HBase Indexer logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

hbase_indexer_fd_thresholds

Required

false

Lily HBase Indexer Host Health Test

Description

When computing the overall Lily HBase Indexer health, consider the host's health.

Related Name

Default Value

true

API Name

hbase_indexer_host_health_enabled

Required

false

Lily HBase Indexer Process Health Test

Description

Enables the health test that the Lily HBase Indexer's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

hbase_indexer_scm_health_enabled

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

HBase Indexer HTTP Port

Description

HTTP port used by HBase Indexer.

Related Name

hbaseindexer.http.port

Default Value

11060

API Name

hbase_indexer_http_port

Required

true

Resource Management

Java Heap Size of Lily HBase Indexer in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

hbase_indexer_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Lily HBase Indexer roles.

Related Name

Default Value

hbase

API Name

kerberos_role_princ_name

Required

true

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Security

HBase Indexer Secure Authentication

Description

Authentication mechanism used by HBase Indexer.

Related Name

hbaseindexer.authentication.type

Default Value

simple

API Name

hbase_indexer_security_authentication

Required

false

HBase Indexer TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that HBase Indexer might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

Default Value

API Name

keystore_indexer_truststore_file

Required

false

HBase Indexer TLS/SSL Trust Store Password

Description

The password for the HBase Indexer TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Related Name

Default Value

API Name

conf/ranger-knox-security.xml_role_safety_valve

Required

false

Knox Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KNOX_GATEWAY_role_env_safety_valve

Required

false

Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Knox Gateway Log Directory

Description

The log directory for log files of the role Knox Gateway.

Related Name

log_dir

Default Value

/var/log/knox/gateway

API Name

log_dir

Required

false

Knox Gateway Logging Threshold

Description

The minimum log level for Knox Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Knox Gateway Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Knox Gateway logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Knox Gateway Max Log Size

Description

The maximum size, in megabytes, per log file for Knox Gateway logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

knox_gateway_fd_thresholds

Required

false

Knox Gateway Host Health Test

Description

When computing the overall Knox Gateway health, consider the host's health.

Related Name

Default Value

true

API Name

knox_gateway_host_health_enabled

Required

false

Knox Gateway Process Health Test

Description

Enables the health test that the Knox Gateway's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

knox_gateway_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.

- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Knox Gateway Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Knox Simplified Topology Management - API Authentication Provider

Description

Authentication provider declaration used by pre-deinfed topologies such as admin, metadata or cdp-proxy-api.

Related Name

gateway_api_authentication_provider

Default Value

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30 authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm authentication.param.main.pamRealm.service=login authentication.param.urls./**=authcBasic

API Name

gateway_api_authentication_provider

Required

false

Auto Discovery - Advanced Configuration Monitoring Interval

Description

Defines the frequency of Knox's service auto-discovery advanced configuration files (auto-discovery-advanced-configuration-[cdp-proxy|cdp-proxy-api].properties) monitoring.

Related Name

gateway.cloudera.manager.advanced.service.discovery.config.monitor.interval

Default Value

10 second(s)

API Name

gateway_auto_discovery_advanced_configuration_monitor_interval

Required

false

Enable Auto Discovery (cdp-proxy-api) - Atlas API

Description

Enables Knox auto-discovery for the Atlas API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.atlas-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_atlas

Required

false

Enable Auto Discovery (cdp-proxy-api) - Phoenix/Avatica

Description

Enables Knox auto-discovery for the Phoenix/Avatica API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.avatica

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_avatica

Required

false

Enable Auto Discovery (cdp-proxy-api) - Cloudera Manager API

Description

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.cm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_cm_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Cruise Control API

Description

Enables Knox auto-discovery for the Cruise Control API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.cruise-control-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_cruise_control

Required

false

Enable Auto Discovery (cdp-proxy-api) - Hive Server

Description

Enables Knox auto-discovery for the Hive Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.hive

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_hive

Required

false

Enable Auto Discovery (cdp-proxy-api) - Impala Catalog Server

Description

Enables Knox auto-discovery for the Impala Catalog Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.impala

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_impala

Required

false

Enable Auto Discovery (cdp-proxy-api) - Livy Server For Spark3 API

Description

Enables Knox auto-discovery for the Livy Server For Spark3 API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.livy_for_spark3

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_livy_for_spark3

Required

false

Enable Auto Discovery (cdp-proxy-api) - Livy Server API

Description

Enables Knox auto-discovery for the Livy Server API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.livyserver

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_livyserver

Required

false

Enable Auto Discovery (cdp-proxy-api) - NameNode

Description

Enables Knox auto-discovery for the NameNode in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.namenode

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_namenode

Required

false

Enable Auto Discovery (cdp-proxy-api) - NiFi

Description

Enables Knox auto-discovery for the NiFi in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.nifi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_nifi

Required

false

Enable Auto Discovery (cdp-proxy-api) - NiFi Registry

Description

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.nifi-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_nifi_registry

Required

false

Enable Auto Discovery (cdp-proxy-api) - Oozie Server

Description

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.oozie

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_oozie

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Admin API

Description

Enables Knox auto-discovery for the Profiler Admin API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-admin-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_admin_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Metrics API

Description

Enables Knox auto-discovery for the Profiler Metrics API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-metrics-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_metrics_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Profiler Scheduler API

Description

Enables Knox auto-discovery for the Profiler Scheduler API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.profiler-scheduler-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_profiler_scheduler_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Ranger Admin

Description

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy-api) - ResourceManager

Description

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy-api) - ResourceManager API

Description

Enables Knox auto-discovery for the ResourceManager API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.resourcemanagerapi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_resourcemanager_api

Required

false

Enable Auto Discovery (cdp-proxy-api) - Schema Registry

Description

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.schema-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_schema_registry

Required

false

Enable Auto Discovery (cdp-proxy-api) - Stream Messaging Manager API

Description

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.smm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_smm

Required

false

Enable Auto Discovery (cdp-proxy-api) - Solr Server

Description

Enables Knox auto-discovery for the Solr Server in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.solr

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_solr

Required

false

Enable Auto Discovery (cdp-proxy-api) - HBase Master API

Description

Enables Knox auto-discovery for the HBase Master API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.webhbase

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_webhbase

Required

false

Enable Auto Discovery (cdp-proxy-api) - WebHDFS API

Description

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy-api topology.

Related Name

gateway.auto.discovery.cdp-proxy-api.enabled.webhdfs

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_api_enabled_webhdfs

Required

false

Enable Auto Discovery (cdp-proxy) - Atlas API

Description

Enables Knox auto-discovery for the Atlas API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.atlas-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_atlas

Required

false

Enable Auto Discovery (cdp-proxy) - Atlas Web UI

Description

Enables Knox auto-discovery for the Atlas Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.atlas

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_atlas_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Cloudera Manager API

Description

Enables Knox auto-discovery for the Cloudera Manager API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.cm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_cm_api

Required

false

Enable Auto Discovery (cdp-proxy) - Cloudera Manager Admin Console

Description

Enables Knox auto-discovery for the Cloudera Manager Admin Console in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.cm-ui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_cm_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Data Analytics Studio

Description

Enables Knox auto-discovery for the Data Analytics Studio in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.das

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_das

Required

false

Enable Auto Discovery (cdp-proxy) - Flink Dashboard

Description

Enables Knox auto-discovery for the Flink Dashboard in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.flink-dashboard

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_flink_dashboard

Required

false

Enable Auto Discovery (cdp-proxy) - HBase Web UI

Description

Enables Knox auto-discovery for the HBase Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.hbaseui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_hbase_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Namenode Web UI

Description

Enables Knox auto-discovery for the Namenode Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.hdfsui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_hdfs_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Hue Server

Description

Enables Knox auto-discovery for the Hue Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.hue

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_hue

Required

false

Enable Auto Discovery (cdp-proxy) - Impala Catalog Server Web UI

Description

Enables Knox auto-discovery for the Impala Catalog Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.impalaui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_impala_ui

Required

false

Enable Auto Discovery (cdp-proxy) - HistoryServer Web UI

Description

Enables Knox auto-discovery for the HistoryServer Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.jobhistoryui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_jobhistory_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Kudu Master Web UI

Description

Enables Knox auto-discovery for the Kudu Master Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.kuduui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_kudu_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Livy Server For Spark3 Web UI

Description

Enables Knox auto-discovery for the Livy Server For Spark3 Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.livy_for_spark3

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_livy_for_spark3

Required

false

Enable Auto Discovery (cdp-proxy) - Livy Server Web UI

Description

Enables Knox auto-discovery for the Livy Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.livyserver

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_livyserver

Required

false

Enable Auto Discovery (cdp-proxy) - NameNode

Description

Enables Knox auto-discovery for the NameNode in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.namenode

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_namenode

Required

false

Enable Auto Discovery (cdp-proxy) - NiFi

Description

Enables Knox auto-discovery for the NiFi in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.nifi

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_nifi

Required

false

Enable Auto Discovery (cdp-proxy) - NiFi Registry

Description

Enables Knox auto-discovery for the NiFi Registry in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.nifi-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_nifi_registry

Required

false

Enable Auto Discovery (cdp-proxy) - Oozie Server

Description

Enables Knox auto-discovery for the Oozie Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.oozie

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_oozie

Required

false

Enable Auto Discovery (cdp-proxy) - Oozie Web UI

Description

Enables Knox auto-discovery for the Oozie Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.oozieui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_oozie_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Ranger Admin

Description

Enables Knox auto-discovery for the Ranger Admin in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.ranger

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ranger

Required

false

Enable Auto Discovery (cdp-proxy) - Ranger Admin Web UI

Description

Enables Knox auto-discovery for the Ranger Admin Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.rangerui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_ranger_ui

Required

false

Enable Auto Discovery (cdp-proxy) - ResourceManager

Description

Enables Knox auto-discovery for the ResourceManager in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.resourcemanager

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_resourcemanager

Required

false

Enable Auto Discovery (cdp-proxy) - Schema Registry

Description

Enables Knox auto-discovery for the Schema Registry in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.schema-registry

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_schema_registry

Required

false

Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager API

Description

Enables Knox auto-discovery for the Stream Messaging Manager API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.smm-api

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_smm

Required

false

Enable Auto Discovery (cdp-proxy) - Stream Messaging Manager Web UI

Description

Enables Knox auto-discovery for the Stream Messaging Manager Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.smm-ui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_smm_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Solr Server

Description

Enables Knox auto-discovery for the Solr Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.solr

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_solr

Required

false

Enable Auto Discovery (cdp-proxy) - Spark 3 History Server Web UI

Description

Enables Knox auto-discovery for the Spark 3 History Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.spark3historyui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_spark3history_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Spark History Server Web UI

Description

Enables Knox auto-discovery for the Spark History Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.sparkhistoryui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_sparkhistory_ui

Required

false

Enable Auto Discovery (cdp-proxy) - WebHDFS API

Description

Enables Knox auto-discovery for the WebHDFS API in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.webhdfs

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_webhdfs

Required

false

Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI

Description

Enables Knox auto-discovery for the ResourceManager Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.yarnui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_yarn_ui

Required

false

Enable Auto Discovery (cdp-proxy) - ResourceManager Web UI V2

Description

Enables Knox auto-discovery for the ResourceManager Web UI V2 in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.yarnuiv2

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_yarn_ui_v2

Required

false

Enable Auto Discovery (cdp-proxy) - Zeppelin Server Web UI

Description

Enables Knox auto-discovery for the Zeppelin Server Web UI in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.zeppelinui

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ui

Required

false

Enable Auto Discovery (cdp-proxy) - Zeppelin Server

Description

Enables Knox auto-discovery for the Zeppelin Server in the cdp-proxy topology.

Related Name

gateway.auto.discovery.cdp-proxy.enabled.zeppelinws

Default Value

true

API Name

gateway_auto_discovery_cdp_proxy_enabled_zeppelin_ws

Required

false

Enable/Disable Service Auto-Discovery

Description

Whether Knox's service auto-discovery feature is enabled

Related Name

gateway.auto.discovery.enabled

Default Value

true

API Name

gateway_auto_discovery_enabled

Required

false

Knox Simplified Topology Management - Monitoring Interval

Description

Defines the frequency of Cloudera Manager resources (descriptors and shared providers) file (cdp-resources.xml) monitoring.

Related Name

gateway.cloudera.manager.descriptors.monitor.interval

Default Value

10 second(s)

API Name

gateway_cloudera_manager_descriptors_monitor_interval

Required

false

Auto Discovery - Cluster Configuration Monitoring Interval

Description

Defines the frequency of cluster configuration monitoring.

Related Name

gateway.cluster.config.monitor.cm.interval

Default Value

1 minute(s)

API Name

gateway_cluster_configuration_monitor_interval

Required

false

Knox Gateway Configuration Directory

Description

Contains configuration files that apply to the gateway globally (i.e. not cluster specific).

Related Name

gateway_conf_dir

Default Value

/var/lib/knox/gateway/conf

API Name

gateway_conf_dir

Required

false

Knox Gateway Data Directory

Description

Contains security and topology specific artifacts as well as important applications for admin-ui

Related Name

gateway_data_dir

Default Value

/var/lib/knox/gateway/data

API Name

gateway_data_dir

Required

false

Gateway - Default App Topology Name

Description

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

Related Name

default.app.topology.name

Default Value

cdp-proxy

API Name

gateway_default_topology_name

Required

false

Knox Simplified Topology Management - cdp-proxy

Description

Knox descriptor block for 'cdp-proxy' topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: $SERVICE_NAME[:$PARAMETER_NAME=$PARAMETER_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m, HIVE:test.pramameter.name=test.parameter.value

Related Name

cdp-proxy

Default Value

providerConfigRef=sso

API Name

gateway_descriptor_cdp_proxy

Required

false

Knox Simplified Topology Management - cdp-proxy-api

Description

Knox descriptor block for 'cdp-proxy-api topology. 'providerConfigRef' indicates the name of shared-provider the given descriptor would like to use. The rest of the entries hold service information. The structure of an service information entry is: $SERVICE_NAME[:$PARAMETER_NAME=$PARAMETER_VALUE]. The 'url' and 'version' parameter names are preserved keywords to set the given service's URL and version. For instance: NIFI, HIVE:url=http://localhost:123, HIVE:version:3.0.0, HIVE:httpclient.socketTimeout=5m, HIVE:test.pramameter.name=test.parameter.value

Related Name

cdp-proxy-api

Default Value

providerConfigRef=pam

API Name

gateway_descriptor_cdp_proxy_api

Required

false

Knox Gateway Dispatch Whitelist

Description

The whitelist to be applied for dispatches associated with the service roles specified by gateway.dispatch.whitelist.services. By default this is replaced with DEFAULT or HTTPS_ONLY based on if TLS is enabled.

Related Name

gateway.dispatch.whitelist

Default Value

WHITELIST_CONFIG_REPLACEME

API Name

gateway_dispatch_whitelist

Required

false

Knox Gateway Dispatch Whitelist Services

Description

The comma-delimited list of service roles for which the 'gateway.dispatch.whitelist' should be applied

Related Name

gateway.dispatch.whitelist.services

Default Value

DATANODE, HBASEUI, HDFSUI, IMPALAUI, JOBHISTORYUI, KUDUUI, NODEUI, YARNUI, YARNUIV2, knoxauth

API Name

gateway_dispatch_whitelist_services

Required

false

Gateway Config Directory

Description

The directory within 'gateway_data_dir' that contains gateway topology files and deployments.

Related Name

gateway.gateway.conf.dir

Default Value

deployments

API Name

gateway_gateway_conf_dir

Required

false

Knox Gateway Initial/Max Heapsize

Description

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

Related Name

gateway_heap_size

Default Value

1 GiB

API Name

gateway_heap_size

Required

true

Additional Gateway Java Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

Related Name

gateway_java_opts

Default Value

API Name

gateway_java_opts

Required

false

Admin Groups

Description

Admin groups for Knox

Related Name

gateway.knox.admin.groups

Default Value

API Name

gateway_knox_admin_groups

Required

false

Knox Master Secret

Description

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

Related Name

gateway_master_secret

Default Value

API Name

gateway_master_secret

Required

true

Gateway Path

Description

The default context path for the gateway.

Related Name

gateway.path

Default Value

gateway

API Name

gateway_path

Required

true

Ranger Knox Plugin Conf Path

Description

Staging directory for Ranger Knox Plugin Configuration. This should generally not be changed.

Related Name

gateway_ranger_knox_plugin_conf_path

Default Value

/var/lib/knox/ranger-knox-plugin

API Name

gateway_ranger_knox_plugin_conf_path

Required

true

Ranger Knox Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/knox/gateway/audit/hdfs/spool

API Name

gateway_ranger_knox_plugin_hdfs_audit_spool_directory

Required

true

Ranger Knox Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.knox.policy.cache.dir

Default Value

/var/lib/ranger/knox/gateway/policy-cache

API Name

gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Ranger Knox Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/knox/gateway/audit/solr/spool

API Name

gateway_ranger_knox_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.knox.trusted.proxy.ipaddress

Default Value

API Name

gateway_ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.knox.use.x-forwarded-for.ipaddress

Default Value

false

API Name

gateway_ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Cookie Scoping Enabled

Description

Enable/Disable cookie scoping feature.

Related Name

gateway.scope.cookies.feature.enabled

Default Value

false

API Name

gateway_scope_cookies_feature_enabled

Required

false

Security - Signing Key Alias

Description

The alias for the signing keypair within the keystore specified via gateway_signing_keystore_name

Related Name

gateway.signing.key.alias

Default Value

API Name

gateway_signing_key_alias

Required

false

Security - Signing Keystore Name

Description

The filename of keystore file that contains the signing keypair

Related Name

gateway.signing.keystore.name

Default Value

API Name

gateway_signing_keystore_name

Required

false

Security - Signing Keystore Type

Description

The type of the keystore file where the signing keypair is stored. See gateway_signing_keystore_name

Related Name

gateway.signing.keystore.type

Default Value

API Name

gateway_signing_keystore_type

Required

false

Knox Simplified Topology Management - SSO Authentication Provider

Description

Authentication provider declaration used by the UIs using the Knox SSO capabilities such as the Admin and Home Page UIs.

Related Name

gateway_sso_authentication_provider

Default Value

role=authentication authentication.name=ShiroProvider authentication.param.sessionTimeout=30 authentication.param.redirectToUrl=/$GATEWAY_PATH/knoxsso/knoxauth/login.html authentication.param.restrictedCookies=rememberme, WWW-Authenticate authentication.param.main.pamRealm=org.apache.knox.gateway.shirorealm.KnoxPamRealm authentication.param.main.pamRealm.service=login authentication.param.urls./**=authcBasic

API Name

gateway_sso_authentication_provider

Required

false

Security - TLS Certificate Alias (Optional)

Description

The alias for the Gateway's TLS certificate and keypair within the default keystore or the keystore specified via gateway.tls.keystore.path

Related Name

gateway_tls_certificate_alias

Default Value

API Name

gateway_tls_certificate_alias

Required

false

Security - Use FQDN as TLS Certificate Alias

Description

If enabled, the FQDN will be used as gateway.tls.key.alias in gateway-site.xml; otherwise the UQDN is used. This behavior is overwritten if gateway_tls_certificate_alias is set. In this case the value in gateway_tls_certificate_alias is used as alias.

Related Name

gateway_tls_certificate_alias_use_fqdn

Default Value

true

API Name

gateway_tls_certificate_alias_use_fqdn

Required

false

Security - TLS Certificate Path (Optional)

Description

The path for the TLS certificate which Knox will import in the CM generated/distributed keystore in case SSL is enabled (if any).

Related Name

gateway_tls_certificate_path

Default Value

API Name

gateway_tls_certificate_path

Required

false

Websockets Enabled

Description

Enable/Disable websocket feature.

Related Name

gateway.websocket.feature.enabled

Default Value

true

API Name

gateway_websocket_feature_enabled

Required

false

X-Forwarded Header Context Service Name

Description

The service name to be added in x-forward-context header.

Related Name

gateway.xforwarded.header.context.append.servicename

Default Value

LIVYSERVER, LIVY_FOR_SPARK3

API Name

gateway_xforwarded_header_context_append_servicename

Required

false

Admin Group Mapping - Class Name

Description

The class name used for Hadoop admin group mapping

Related Name

gateway.group.config.hadoop.security.group.mapping

Default Value

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

API Name

hadoop_security_group_mapping_class

Required

false

Hadoop Group Mapping - Negative Cache Expiration

Description

The Hadoop group mapping negative cache expiration in seconds

Related Name

gateway.group.config.hadoop.security.groups.negative-cache.secs

Default Value

5 second(s)

API Name

hadoop_security_group_negative_cache_expiration_seconds

Required

false

Hadoop Group Mapping - Positive Cache Expiration

Description

The Hadoop group mapping positive cache expiration in seconds

Related Name

gateway.group.config.hadoop.security.groups.cache.secs

Default Value

10 second(s)

API Name

hadoop_security_group_positive_cache_expiration_seconds

Required

false

krb5.conf Location

Description

Absolute path to krb5.conf file

Related Name

java.security.krb5.conf

Default Value

/etc/krb5.conf

API Name

java_security_krb5_conf

Required

false

KRB5 Debug

Description

Boolean flag indicating whether to enable debug messages for krb5 authentication

Related Name

sun.security.krb5.debug

Default Value

false

API Name

sun_security_krb5_debug

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Gateway HTTP Port

Description

The HTTP port for the Gateway.

Related Name

gateway.port

Default Value

8443

API Name

gateway_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Knox Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

gateway.httpclient.truststore.path

Default Value

API Name

ssl_client_truststore_location

Required

false

Knox Gateway TLS/SSL Trust Store Password

Description

The password for the Knox Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Knox Gateway

Description

Encrypt communication between clients and Knox Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

knox.enableTLS

Default Value

false

API Name

ssl_enabled

Required

false

Knox Gateway TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox Gateway is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

gateway.tls.keystore.path

Default Value

API Name

ssl_server_keystore_location

Required

false

Knox Gateway TLS/SSL Server Keystore File Password

Description

The password for the Knox Gateway keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/auto-discovery-advanced-configuration-cdp-proxy-api.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/auto-discovery-advanced-configuration-cdp-proxy.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/auto-discovery-advanced-configuration-cdp-proxy.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/cdp-resources.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/cdp-resources.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/gateway-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-audit.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-knox-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-policymgr-ssl.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-knox-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Advanced Configuration Snippet (Safety Valve) for conf/ranger-knox-security.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-knox-security.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - API Authentication Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - API Authentication Provider parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_api_authentication_provider

Required

true

Suppress Parameter Validation: Knox Gateway Configuration Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Configuration Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_conf_dir

Required

true

Suppress Parameter Validation: Knox Gateway Data Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Data Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_data_dir

Required

true

Suppress Parameter Validation: Gateway - Default App Topology Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway - Default App Topology Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_default_topology_name

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - cdp-proxy-api

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - cdp-proxy-api parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy_api

Required

true

Suppress Parameter Validation: Knox Gateway Dispatch Whitelist

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_dispatch_whitelist

Required

true

Suppress Parameter Validation: Knox Gateway Dispatch Whitelist Services

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Dispatch Whitelist Services parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_dispatch_whitelist_services

Required

true

Suppress Parameter Validation: Gateway Config Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Config Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_gateway_conf_dir

Required

true

Suppress Parameter Validation: Knox Gateway Initial/Max Heapsize

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Initial/Max Heapsize parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_heap_size

Required

true

Suppress Parameter Validation: Additional Gateway Java Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Additional Gateway Java Options parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_java_opts

Required

true

Suppress Parameter Validation: Admin Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Groups parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_admin_groups

Required

true

Suppress Parameter Validation: Knox Master Secret

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Master Secret parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_master_secret

Required

true

Suppress Parameter Validation: Gateway Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_path

Required

true

Suppress Parameter Validation: Gateway HTTP Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway HTTP Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_port

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Conf Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_conf_path

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Hdfs Spool Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_hdfs_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Policy Cache Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Audit Solr Spool Directory Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Security - Signing Key Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Key Alias parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_key_alias

Required

true

Suppress Parameter Validation: Security - Signing Keystore Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_keystore_name

Required

true

Suppress Parameter Validation: Security - Signing Keystore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - Signing Keystore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_keystore_type

Required

true

Suppress Parameter Validation: Knox Simplified Topology Management - SSO Authentication Provider

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Simplified Topology Management - SSO Authentication Provider parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_sso_authentication_provider

Required

true

Suppress Parameter Validation: Security - TLS Certificate Alias (Optional)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Alias (Optional) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_tls_certificate_alias

Required

true

Suppress Parameter Validation: Security - TLS Certificate Path (Optional)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Security - TLS Certificate Path (Optional) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_tls_certificate_path

Required

true

Suppress Parameter Validation: X-Forwarded Header Context Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the X-Forwarded Header Context Service Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_xforwarded_header_context_append_servicename

Required

true

Suppress Parameter Validation: Admin Group Mapping - Class Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Group Mapping - Class Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_security_group_mapping_class

Required

Suppress Parameter Validation: Knox Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Knox Gateway Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Knox Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Knox Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Knox Gateway TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Gateway TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Knox IDBroker Log Directory

Description

The log directory for log files of the role Knox IDBroker.

Related Name

log_dir

Default Value

/var/log/knox/idbroker

API Name

log_dir

Required

false

Knox IDBroker Logging Threshold

Description

The minimum log level for Knox IDBroker logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Knox IDBroker Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Knox IDBroker logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Knox IDBroker Max Log Size

Description

The maximum size, in megabytes, per log file for Knox IDBroker logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

idbroker_fd_thresholds

Required

false

Knox IDBroker Host Health Test

Description

When computing the overall Knox IDBroker health, consider the host's health.

Related Name

Default Value

true

API Name

idbroker_host_health_enabled

Required

false

Knox IDBroker Process Health Test

Description

Enables the health test that the Knox IDBroker's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

idbroker_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.

- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Knox IDBroker Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Knox IDBroker AWS Credentials Key

Description

The AWS credentials key

Related Name

idbroker_aws_credentials_key

Default Value

API Name

idbroker_aws_credentials_key

Required

false

Knox IDBroker AWS Credentials Secret

Description

The AWS credentials secret

Related Name

idbroker_aws_credentials_secret

Default Value

API Name

idbroker_aws_credentials_secret

Required

false

Knox IDBroker AWS Group Mapping

Description

The list of AWS group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;audit=arn:aws:iam:XYZ:role/s3Read

Related Name

idbroker.aws.group.role.mapping

Default Value

API Name

idbroker_aws_group_mapping

Required

false

Knox IDBroker AWS User Default Group Mapping

Description

The list of AWS user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.aws.user.default.group.mapping

Default Value

API Name

idbroker_aws_user_default_group_mapping

Required

false

Knox IDBroker AWS User Mapping

Description

The list of AWS user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user’s primary principal to the specified role. For instance: admin=arn:aws:iam:XYZ:role/s3full;guest=arn:aws:iam:XYZ:role/s3Read

Related Name

idbroker.aws.user.role.mapping

Default Value

API Name

idbroker_aws_user_mapping

Required

false

Knox IDBroker AZURE ADLS2 Tenant Name

Description

The name of the AZURE AD tenant. A tenant is a representation of an organization. It's a dedicated instance of Azure AD that an organization or application developer receives when the organization or application developer creates a relationship with Microsoft

Related Name

idbroker_azure_adls2_tenant_name

Default Value

API Name

idbroker_azure_adls2_tenant_name

Required

false

Knox IDBroker AZURE 'blob-contributor' ClientID

Description

The client ID credential for 'blob-contributor' role

Related Name

idbroker_azure_blob_contributor_clientid

Default Value

API Name

idbroker_azure_blob_contributor_clientid

Required

false

Knox IDBroker AZURE 'blob-contributor' Secret

Description

The secret credential for 'blob-contributor' role

Related Name

idbroker_azure_blob_contributor_secret

Default Value

API Name

idbroker_azure_blob_contributor_secret

Required

false

Knox IDBroker AZURE 'blob-reader' ClientID

Description

The client ID credential for 'blob-reader' role

Related Name

idbroker_azure_blob_reader_clientid

Default Value

API Name

idbroker_azure_blob_reader_clientid

Required

false

Knox IDBroker AZURE 'blob-reader' Secret

Description

The secret credential for 'blob-reader' role

Related Name

idbroker_azure_blob_reader_secret

Default Value

API Name

idbroker_azure_blob_reader_secret

Required

false

Knox IDBroker AZURE Group Mapping

Description

The list of AZURE group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=blob-contributor

Related Name

idbroker.adls2.group.role.mapping

Default Value

API Name

idbroker_azure_group_mapping

Required

false

Knox IDBroker AZURE User Default Group Mapping

Description

The list of AZURE user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.azure.user.default.group.mapping

Default Value

API Name

idbroker_azure_user_default_group_mapping

Required

false

Knox IDBroker AZURE User Mapping

Description

The list of AZURE user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user’s primary principal to the specified role. For instance: admin=blob-contributor

Related Name

idbroker.adls2.user.role.mapping

Default Value

API Name

idbroker_azure_user_mapping

Required

false

Knox IDBroker AZURE VM Assumer Identity

Description

A user assigned managed identity that has Virtual Machine Contributor and Managed Identity Operator roles scoped at the resource group where IDBroker Virtual Machine is running.

Related Name

idbroker_azure_vm_assumer_identity

Default Value

API Name

idbroker_azure_vm_assumer_identity

Required

false

Knox IDBroker Configuration Directory

Description

Contains configuration files that apply to the gateway globally (i.e. not cluster specific).

Related Name

idbroker_conf_dir

Default Value

/var/lib/knox/idbroker/conf

API Name

idbroker_conf_dir

Required

false

Knox IDBroker Data Directory

Description

Contains security and topology specific artifacts as well as important applications for admin-ui

Related Name

idbroker_data_dir

Default Value

/var/lib/knox/idbroker/data

API Name

idbroker_data_dir

Required

false

Gateway - Default App Topology Name

Description

When a topology file is deployed with a file name that matches the configured default topology name, a specialized mapping for URLs is installed for that particular topology. This allows the URLs that are expected by the existing Hadoop CLIs for WebHDFS to be used in interacting with the specific Hadoop cluster that is represented by the default topology file.

Related Name

default.app.topology.name

Default Value

API Name

idbroker_default_topology_name

Required

false

Gateway Config Directory

Description

The directory within 'idbroker_data_dir' that contains gateway topology files and deployments.

Related Name

gateway.gateway.conf.dir

Default Value

deployments

API Name

idbroker_gateway_gateway_conf_dir

Required

false

Admin Groups

Description

Admin groups for Knox

Related Name

gateway.knox.admin.groups

Default Value

API Name

idbroker_gateway_knox_admin_groups

Required

false

Gateway Path

Description

The default context path for the gateway.

Related Name

gateway.path

Default Value

gateway

API Name

idbroker_gateway_path

Required

true

Cookie Scoping Enabled

Description

Enable/Disable cookie scoping feature.

Related Name

gateway.scope.cookies.feature.enabled

Default Value

false

API Name

idbroker_gateway_scope_cookies_feature_enabled

Required

false

Security - Signing Key Alias

Description

The alias for the signing keypair within the keystore specified via idbroker_gateway_signing_keystore_name

Related Name

gateway.signing.key.alias

Default Value

API Name

idbroker_gateway_signing_key_alias

Required

false

Security - Signing Keystore Name

Description

The filename of keystore file that contains the signing keypair

Related Name

gateway.signing.keystore.name

Default Value

API Name

idbroker_gateway_signing_keystore_name

Required

false

Security - Signing Keystore Type

Description

The type of the keystore file where the signing keypair is stored. See idbroker_gateway_signing_keystore_name

Related Name

gateway.signing.keystore.type

Default Value

API Name

idbroker_gateway_signing_keystore_type

Required

false

Knox IDBroker GCP Credential Key

Description

The GCP Credential Key

Related Name

idbroker_gcp_credential_key

Default Value

API Name

idbroker_gcp_credential_key

Required

false

Knox IDBroker GCP Credential Secret

Description

The GCP Credential Secret

Related Name

Default Value

API Name

idbroker_gcp_credential_secret

Required

false

Knox IDBroker GCP Group Mapping

Description

The list of GCP group-role mappings in 'group=role[;group=role]...[;group=role]' format. A 'group=role' declaration indicates that all authenticated users that are member of the specified group should be able to assume the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;audit=storage-read-only@XYZ.iam.gserviceaccount.com

Related Name

idbroker.gcp.group.role.mapping

Default Value

API Name

idbroker_gcp_group_mapping

Required

false

Knox IDBroker GCP User Default Group Mapping

Description

The list of GCP user default group mappings in 'user=group[;user=group;...;user=group]' format. A 'user=group' declaration allows the given user to get its credentials indicated by the given group (in case the user belongs to different mapped groups)

Related Name

idbroker.gcp.user.default.group.mapping

Default Value

API Name

idbroker_gcp_user_default_group_mapping

Required

false

Knox IDBroker GCP User Mapping

Description

The list of GCP user-role mappings in 'user=role[;user=role]...[;user=role]' format. A 'user=role' declaration indicates that this is a mapping of the authenticated user's primary principal to the specified role. For instance: admin=storage-admin@XYZ.iam.gserviceaccount.com;guest=storage-read-only@XYZ.iam.gserviceaccount.com

Related Name

idbroker.gcp.user.role.mapping

Default Value

API Name

idbroker_gcp_user_mapping

Required

false

Admin Group Mapping - Class Name

Description

The class name used for Hadoop admin group mapping

Related Name

gateway.group.config.hadoop.security.group.mapping

Default Value

org.apache.hadoop.security.ShellBasedUnixGroupsMapping

API Name

idbroker_hadoop_security_group_mapping_class

Required

false

IDBroker Initial/Max Heapsize

Description

Initial/Maximum size for the Java Process heap. Passed to Java -Xmx/-Xms. Measured in megabytes.

Related Name

idbroker_heap_size

Default Value

1 GiB

API Name

idbroker_heap_size

Required

true

Additional IDBroker Java Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here. -Xmx/-Xms should not be specified here: to set the heapsize use the 'Knox Gateway Initial/Max Heapsize' parameter

Related Name

idbroker_java_opts

Default Value

API Name

idbroker_java_opts

Required

false

krb5.conf Location

Description

Absolute path to krb5.conf file

Related Name

java.security.krb5.conf

Default Value

/etc/krb5.conf

API Name

idbroker_java_security_krb5_conf

Required

false

Kerberos Proxyuser Block

Description

Proxyuser configuration used in Knox's 'dt' topology in case Kerberos is enabled. Must conform a valid JSON key-value format!

Related Name

idbroker_kerberos_dt_proxyuser_block

Default Value

hadoop.proxyuser.livy.hosts: * hadoop.proxyuser.livy.groups: * hadoop.proxyuser.hive.hosts: * hadoop.proxyuser.hive.groups: * hadoop.proxyuser.httpfs.hosts: * hadoop.proxyuser.httpfs.groups: * hadoop.proxyuser.hue.hosts: * hadoop.proxyuser.hue.groups: * hadoop.proxyuser.oozie.hosts: * hadoop.proxyuser.oozie.groups: * hadoop.proxyuser.impala.hosts: * hadoop.proxyuser.impala.groups: *

API Name

idbroker_kerberos_dt_proxyuser_block

Required

false

IDBroker Knox Token Eviction Grace Period

Description

Defines the grace period for which an expired token's state will avoid eviction. Setting this to zero means there is no grace period, and token state is evicted based on expiration only. See idbroker_knox_token_eviction_interval for more information.

Related Name

gateway.knox.token.eviction.grace.period

Default Value

1 day(s)

API Name

idbroker_knox_token_eviction_grace_period

Required

false

IDBroker Knox Token Eviction Interval

Description

Defines the interval on which Knox will check for expired token state which should be evicted. If the value is equal to zero, Knox will not perform this check.

Related Name

gateway.knox.token.eviction.interval

Default Value

1 minute(s)

API Name

idbroker_knox_token_eviction_interval

Required

false

IDBroker Knox Token Permissive Validation

Description

When enabled, Knox will verify tokens for which there is no server-managed state based only on the contents of the tokens themselves, rather than throwing UnknownToken exceptions.

Related Name

gateway.knox.token.permissive.validation

Default Value

false

API Name

idbroker_knox_token_permissive_validation

Required

false

Enable IDBroker Knox Token State Server

Description

Whether the Knox token state server is enabled for IDBroker

Related Name

idbroker_knox_token_state_enabled

Default Value

false

API Name

idbroker_knox_token_state_enabled

Required

false

IDBroker Knox Token TTL

Description

This indicates the lifespan of the token. Once it expires a new token must be acquired from KnoxToken service. This is in milliseconds.

Related Name

idbroker_knox_token_ttl_ms

Default Value

7 day(s)

API Name

idbroker_knox_token_ttl_ms

Required

false

IDBroker Master Secret

Description

The master secret is used to access secured artifacts by the gateway instance. Keystore, trust stores and credential stores are all protected with the master secret. NOTE: changing the master secret will require you to change passwords protecting the keystores for the gateway, identity keystores and all credential stores

Related Name

idbroker_master_secret

Default Value

API Name

idbroker_master_secret

Required

true

Gateway Config Refresh Interval

Description

Defines the frequency of gateway configuration refresh.

Related Name

gateway.config.refresh.interval

Default Value

10 second(s)

API Name

idbroker_relaodable_refresh_interval_ms

Required

false

KRB5 Debug

Description

Boolean flag indicating whether to enable debug messages for krb5 authentication

Related Name

sun.security.krb5.debug

Default Value

false

API Name

idbroker_sun_security_krb5_debug

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Gateway HTTP Port

Description

The HTTP port for the Gateway.

Related Name

gateway.port

Default Value

8444

API Name

idbroker_gateway_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Knox IDBroker TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Knox IDBroker might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

gateway.httpclient.truststore.path

Default Value

API Name

ssl_client_truststore_location

Required

false

Knox IDBroker TLS/SSL Trust Store Password

Description

The password for the Knox IDBroker TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Knox IDBroker

Description

Encrypt communication between clients and Knox IDBroker using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

knox.enableTLS

Default Value

false

API Name

ssl_enabled

Required

false

Knox IDBroker TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Knox IDBroker is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

gateway.tls.keystore.path

Default Value

API Name

ssl_server_keystore_location

Required

false

Knox IDBroker TLS/SSL Server Keystore File Password

Description

The password for the Knox IDBroker keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Healthy Knox Gateway Monitoring Thresholds

Description

The health test thresholds of the overall Knox Gateway health. The check returns "Concerning" health if the percentage of "Healthy" Knox Gateways falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Knox Gateways falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

KNOX_KNOX_GATEWAY_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

true

Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy

Description

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy

Required

true

Suppress Configuration Validator: Knox Simplified Topology Management - cdp-proxy-api

Description

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - cdp-proxy-api configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_descriptor_cdp_proxy_api

Required

true

Suppress Configuration Validator: Knox Gateway Dispatch Whitelist

Description

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_dispatch_whitelist

Required

true

Suppress Configuration Validator: Knox Gateway Dispatch Whitelist Services

Description

Whether to suppress configuration warnings produced by the Knox Gateway Dispatch Whitelist Services configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_dispatch_whitelist_services

Required

true

Suppress Configuration Validator: Gateway Config Directory

Description

Whether to suppress configuration warnings produced by the Gateway Config Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_gateway_conf_dir

Required

true

Suppress Configuration Validator: Knox Gateway Initial/Max Heapsize

Description

Whether to suppress configuration warnings produced by the Knox Gateway Initial/Max Heapsize configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_heap_size

Required

true

Suppress Configuration Validator: Additional Gateway Java Options

Description

Whether to suppress configuration warnings produced by the Additional Gateway Java Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_java_opts

Required

true

Suppress Configuration Validator: Admin Groups

Description

Whether to suppress configuration warnings produced by the Admin Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_knox_admin_groups

Required

true

Suppress Configuration Validator: Knox Master Secret

Description

Whether to suppress configuration warnings produced by the Knox Master Secret configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_master_secret

Required

true

Suppress Configuration Validator: Gateway Path

Description

Whether to suppress configuration warnings produced by the Gateway Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_path

Required

true

Suppress Configuration Validator: Gateway HTTP Port

Description

Whether to suppress configuration warnings produced by the Gateway HTTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_port

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Conf Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_conf_path

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Hdfs Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_hdfs_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Policy Cache Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger Knox Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Knox Plugin Audit Solr Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_knox_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Security - Signing Key Alias

Description

Whether to suppress configuration warnings produced by the Security - Signing Key Alias configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_key_alias

Required

true

Suppress Configuration Validator: Security - Signing Keystore Name

Description

Whether to suppress configuration warnings produced by the Security - Signing Keystore Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_signing_keystore_name

Required

true

Suppress Configuration Validator: Security - Signing Keystore Type

Description

Whether to suppress configuration warnings produced by the Security - Signing Keystore Type configuration validator.

Related Name

false

API Name

role_config_suppression_gateway_signing_keystore_type

Required

true

Suppress Configuration Validator: Knox Simplified Topology Management - SSO Authentication Provider

Description

Whether to suppress configuration warnings produced by the Knox Simplified Topology Management - SSO Authentication Provider configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_sso_authentication_provider

Required

true

Suppress Configuration Validator: Security - TLS Certificate Alias (Optional)

Description

Whether to suppress configuration warnings produced by the Security - TLS Certificate Alias (Optional) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_tls_certificate_alias

Required

true

Suppress Configuration Validator: Security - TLS Certificate Path (Optional)

Description

Whether to suppress configuration warnings produced by the Security - TLS Certificate Path (Optional) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_tls_certificate_path

Required

true

Suppress Configuration Validator: X-Forwarded Header Context Service Name

Description

Whether to suppress configuration warnings produced by the X-Forwarded Header Context Service Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_gateway_xforwarded_header_context_append_servicename

Required

true

Suppress Configuration Validator: Admin Group Mapping - Class Name

Description

Whether to suppress configuration warnings produced by the Admin Group Mapping - Class Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_security_group_mapping_class

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Credentials Key

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Key configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_idbroker_aws_credentials_key

Required

true

Suppress Configuration Validator: Knox IDBroker AWS Credentials Secret

Description

Whether to suppress configuration warnings produced by the Knox IDBroker AWS Credentials Secret configuration validator.

Related Name

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Knox Gateway TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Knox Gateway TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Advanced Configuration Snippet (Safety Valve) for conf/gateway-site.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_conf/gateway-site.xml_service_safety_valve

Required

false

API Name

service_config_suppression_knox_gateway_count_validator

Required

true

Suppress Parameter Validation: Knox Home Page - Hidden Topologies

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Hidden Topologies parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_homepage_hidden_topologies

Required

true

Suppress Parameter Validation: Knox Home Page - Pinned Topologies

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Home Page - Pinned Topologies parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_homepage_pinned_topologies

Required

true

Suppress Parameter Validation: Knox PAM Realm - Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox PAM Realm - Service Name parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_pam_realm_service

Required

true

Suppress Parameter Validation: Knox Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_knox_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Knox Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Knox Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_knox_plugin_hdfs_audit_directory

Required

true

Suppress Parameter Validation: Save Alias Command Input

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Alias Command Input parameter.

Related Name

Default Value

false

API Name

service_config_suppression_save_alias_command_input_password

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Knox IDBroker Health

Description

Whether to suppress the results of the Knox IDBroker Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_knox_idbroker_healthy

Required

true

Suppress Health Test: Knox Gateway Health

Description

Whether to suppress the results of the Knox Gateway Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Kudu Properties in Cloudera Runtime 7.2.15

Role groups:

Master

Advanced

Master Advanced Configuration Snippet (Safety Valve) for gflagfile

Description

For advanced use only. A string to be inserted into gflagfile for this role only.

Related Name

Default Value

API Name

gflagfile_role_safety_valve

Required

false

Master Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

Description

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

Related Name

Default Value

API Name

kudu-monitoring.properties_role_safety_valve

Required

false

Master Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KUDU_MASTER_role_env_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-audit.xml

Description

For advanced use only. A string to be inserted into ranger-kudu-audit.xml for this role only.

Related Name

Default Value

API Name

ranger-kudu-audit.xml_role_safety_valve

Required

false

Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into ranger-kudu-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

ranger-kudu-policymgr-ssl.xml_role_safety_valve

Required

false

Master Advanced Configuration Snippet (Safety Valve) for ranger-kudu-security.xml

Description

For advanced use only. A string to be inserted into ranger-kudu-security.xml for this role only.

Related Name

Default Value

API Name

ranger-kudu-security.xml_role_safety_valve

Required

false

Logs

Master Maximum Log Level to Buffer

Description

Log messages logged at this level or lower are buffered in memory.

Related Name

logbuflevel

Default Value

0

API Name

glog_logbuflevel

Required

false

Master Maximum Log Size

Description

Approximate maximum log file size in megabytes before rolling to a new log file.

Related Name

max_log_size

Default Value

1800 MiB

API Name

glog_maxlogsize

Required

false

Master Minimum Log Level

Description

Messages logged via LOG() at a lower level than this are not logged anywhere.

Related Name

minloglevel

Default Value

0

API Name

glog_minloglevel

Required

false

Master Minimum Log Verbosity

Description

Messages logged via VLOG() at a lower verbosity than this are not logged anywhere.

Related Name

v

Default Value

0

API Name

glog_verbose

Required

false

Master Log Directory

Description

The log directory for log files of the role Master.

Related Name

log_dir

Default Value

/var/log/kudu

API Name

log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

Required

false

Enable Failed Data Directories

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KUDU-KUDU_MASTER-7.1.7-FAILED_DATA_DIRS_test_enable

Required

false

Enable Full Data Directories

Description

Enables or disables the health test. When disabled, the test does not run at all, nor generate health history.

Related Name

Default Value

true

API Name

KUDU-KUDU_MASTER-7.1.7-FULL_DATA_DIRS_test_enable

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

kudu_master_fd_thresholds

Required

false

Master Host Health Test

Description

When computing the overall Master health, consider the host's health.

Related Name

Default Value

true

API Name

kudu_master_host_health_enabled

Required

false

Master Process Health Test

Description

Enables the health test that the Master's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

kudu_master_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Master Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

1 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Default Number of Replicas

Description

Default number of replicas for each tablet.

Related Name

default_num_replicas

Default Value

3

API Name

default_num_replicas

Required

true

Kudu Master Data Directories

Description

Directories where Kudu masters will store data blocks.

Related Name

fs_data_dirs

Default Value

API Name

fs_data_dirs

Required

true

Kudu Master WAL Directory

Description

Directory where Kudu masters will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

Related Name

fs_wal_dir

Default Value

API Name

fs_wal_dir

Required

true

Kudu Master WAL Fsyncs All Entries

Description

If true, the Master will use the fsync system call to ensure that all modifications to the catalog table are durably written to disk. WARNING: In this release, enabling this option can cause serious issues.

Related Name

log_force_fsync_all

Default Value

false

API Name

log_force_fsync_all

Required

true

Master Address

Description

Configuration that's automatically set by Cloudera Manager to propagate the Master's address to the Tablet Servers.

Related Name

server.address

Default Value

API Name

master_address

Required

false

Kudu Master Core Dump Directory

Description

If Enable Core Dump is set, Kudu masters will dump cores to this location.

Related Name

master_core_dump_directory

Default Value

/var/log/kudu

API Name

master_core_dump_directory

Required

true

Kudu Metrics URL Parameters

Description

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

Related Name

metrics_url_parameters

Default Value

compact=1&level=info

API Name

metrics_url_parameters

Required

true

Ranger Kudu Plugin Audit HDFS Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kudu/audit/hdfs/spool

API Name

ranger_kudu_plugin_hdfs_audit_spool_directory

Required

true

Ranger Kudu Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kudu.policy.cache.dir

Default Value

/var/lib/ranger/kudu/policy-cache

API Name

ranger_kudu_plugin_policy_cache_directory

Required

true

Ranger service name for this Kudu service

Description

Name of the Kudu Ranger service, that is used for authorization by this Kudu service. If this parameter is set to the placeholder value '{{GENERATED_RANGER_SERVICE_NAME}}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this Kudu service. The name can consist of alphanumeric and '_' characters.

Related Name

ranger.plugin.kudu.service.name

Default Value

cm_kudu

API Name

ranger_kudu_plugin_service_name

Required

false

Ranger Kudu Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kudu/audit/solr/spool

API Name

ranger_kudu_plugin_solr_audit_spool_directory

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kudu.trusted.proxy.ipaddress

Default Value

API Name

ranger_kudu_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kudu.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_kudu_plugin_use_x_forwarded_for_ipaddress

Required

false

Kudu Master Web UI Interface

Description

The interface of the Kudu Master Web UI. If blank, binds to 0.0.0.0.

Related Name

webserver_interface

Default Value

API Name

webserver_interface

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Kudu Master Web UI Port

Description

The port of the Kudu Master Web UI.

Related Name

webserver_port

Default Value

8051

API Name

webserver_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Master TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Master might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

kudu.ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Master TLS/SSL Trust Store Password

Description

The password for the Master TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

kudu.ssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Master

Description

Encrypt communication between clients and Master using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Master TLS/SSL Server CA Certificate (PEM Format)

Description

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Master is acting as a TLS/

SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

Default Value

API Name

ssl_server_ca_certificate_location

Required

false

Master TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value

API Name

ssl_server_certificate_location

Required

false

Master TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Master is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value

API Name

ssl_server_privatekey_location

Required

false

Master TLS/SSL Private Key Password

Description

The password for the private key in the Master TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value

API Name

ssl_server_privatekey_password

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Master Monitoring Thresholds

Description

The health test thresholds of the overall Master health. The check returns "Concerning" health if the percentage of "Healthy" Masters falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Masters falls below the critical threshold.

Related Name

Default Value

Warning: 80.1 %, Critical: 60.0 %

API Name

KUDU_KUDU_MASTER_healthy_thresholds

Required

false

Healthy Tablet Server Monitoring Thresholds

Description

The health test thresholds of the overall Tablet Server health. The check returns "Concerning" health if the percentage of "Healthy" Tablet Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Tablet Servers falls below the critical threshold.

Related Name

Default Value

Warning: 75.0 %, Critical: 50.0 %

API Name

KUDU_KUDU_TSERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Other

Time Servers for Built-In NTP Client

Description

Comma-separated list of NTP servers to use for the built-in NTP client, in format FQDN|IPv4[:PORT]. These are only used if the 'builtin' Time Source is selected.

Related Name

builtin_ntp_servers

Default Value

0.pool.ntp.org, 1.pool.ntp.org, 2.pool.ntp.org, 3.pool.ntp.org

API Name

builtin_ntp_servers

Required

false

Enable Core Dump

Description

Used to generate a core dump to get more information about a Kudu crash. Unless otherwise configured systemwide using /proc/sys/kernel/core_pattern, the dump is generated in the configured core dump directory. The core file can be very large.

Related Name

enable_core_dump

Default Value

false

API Name

enable_core_dump

Required

true

Enable Secure Authentication, Encryption, And Web UI

Description

Enable secure authentication and encryption between all Kudu clients and servers as well as between individual servers. Also enables secure authentication in every Kudu server's web UI. Kerberos must be configured.

Related Name

enable_security

Default Value

false

API Name

enable_security

Required

true

HDFS Service

Description

Name of the HDFS service that this Kudu service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

Maximum Number of Per-tablet-server Replica Moves

Description

Maximum number of replica moves to perform concurrently on one tablet server: moves of replicas to the server and moves of replicas off of the server count against this limit.

Related Name

rb_max_moves_per_server

Default Value

5

API Name

rb_max_moves_per_server

Required

false

Maximum Allowed Runtime of the Rebalancing Tool

Description

Maximum time to run the rebalancing, in seconds. Specifying 0 means not imposing any limit on the rebalancing run time.

Related Name

rb_max_run_time_sec

Default Value

0

API Name

rb_max_run_time_sec

Required

false

Maximum Allowed Duration Without Rebalancer Progress

Description

Maximum duration of the 'staleness' interval where the rebalance can not make progress. If this period elapses without the rebalancer making progress, it will exit indicating failure. This may happen in case of a persistent problem with the cluster or when some unexpected concurrent activity is present (such as automatic recovery of failed replicas, etc.)

Related Name

rb_max_staleness_interval_sec

Default Value

300

API Name

rb_max_staleness_interval_sec

Required

false

Maximum Allowed Runtime to Rolling Restart a Batch of Servers

Description

Maximum time to allow for the restart of a batch of servers during a rolling restart. If this period elapses without the cluster becoming healthy, the rolling restart will exit indicating failure. This may happen if there is a persistent problem with the cluster.

Related Name

rr_batch_time_limit_sec

Default Value

1800

API Name

rr_batch_time_limit_sec

Required

false

Rolling Restart Health Check Interval

Description

Interval in seconds with which to check the health of a cluster in waiting for a server or batch of servers to come back online, before moving onto the next server or batch of servers during a rolling restart.

Related Name

rr_health_check_interval_sec

Default Value

60

API Name

rr_health_check_interval_sec

Required

false

Sentry Service

Description

Name of the Sentry service that this Kudu service instance depends on

Related Name

Default Value

API Name

sentry_service

Required

false

Superuser Access Control List

Description

The list of usernames to allow as super users, comma-separated. A '*' entry indicates that all authenticated users are allowed. If this is left unset or blank, the default behavior is that the identity of the daemon itself determines the superuser. If the daemon is logged in from a Keytab, then the local username from the Kerberos principal is used; otherwise, the local Unix username is used.

Related Name

superuser_acl

Default Value

API Name

superuser_acl

Required

false

Time Source

Description

Time source for HybridClock timestamps. If set to 'auto', Kudu selects the best available time source for the environment: for particular public cloud types, Kudu uses the dedicated NTP server available from within a public cloud instance, otherwise, Kudu relies on the local system clock to be synchronized by NTP. If set to 'builtin', Kudu masters and tablet servers use the built-in NTP client, where the set of servers is configured as specified by the 'Servers for Built-in NTP Client' configuration property (--builtin_ntp_servers flag). If set to 'system', Kudu relies on the local system clock to be synchronized by NTP, where the synchronization by NTP is a requirement.

Related Name

time_source

Default Value

system

API Name

time_source

Required

true

User Access Control List

Description

The list of usernames who may access the cluster, comma-separated. A '*' entry indicates that all authenticated users are allowed.

Related Name

Tablet Server

Advanced

Tablet Server Advanced Configuration Snippet (Safety Valve) for gflagfile

Description

For advanced use only. A string to be inserted into gflagfile for this role only.

Related Name

Default Value

API Name

gflagfile_role_safety_valve

Required

false

Tablet Server Advanced Configuration Snippet (Safety Valve) for kudu-monitoring.properties

Description

For advanced use only. A string to be inserted into kudu-monitoring.properties for this role only.

Related Name

Default Value

API Name

kudu-monitoring.properties_role_safety_valve

Required

false

Tablet Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

KUDU_TSERVER_role_env_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Kudu Tablet Server Block Cache Capacity

Description

Maximum amount of memory allocated to the Kudu Tablet Server's block cache.

Related Name

block_cache_capacity_mb

Default Value

512 MiB

API Name

block_cache_capacity_mb

Required

true

Tablet Server Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

1 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Kudu Tablet Server Data Directories

Description

Directories where Kudu tablet servers will store data blocks.

Related Name

fs_data_dirs

Default Value

API Name

fs_data_dirs

Required

true

Kudu Tablet Server WAL Directory

Description

Directory where Kudu tablet servers will store write-ahead logs. It can be the same as one of the data directories, but not a sub-directory of a data directory. Master and tablet servers must use different directories when co-located on the same machine.

Related Name

fs_wal_dir

Default Value

API Name

fs_wal_dir

Required

true

Kudu Tablet Server WAL Fsyncs All Entries

Description

If true, the Tablet Server will use the fsync system call to ensure that all writes are durably written to to the write-ahead log (WAL) before responding. If false, edits will be written to the Linux buffer cache on a majority of replicas before responding.

Related Name

log_force_fsync_all

Default Value

false

API Name

log_force_fsync_all

Required

true

Kudu Tablet Server Maintenance Threads

Description

The number of threads devoted to background maintenance operations such as flushes and compactions. If the tablet server appears to be falling behind on write operations (inserts, updates, and deletes) but CPU and disk resources are not saturated, increasing this thread count will devote more resources to these background operations.

Related Name

maintenance_manager_num_threads

Default Value

1

API Name

maintenance_manager_num_threads

Required

true

Kudu Tablet Server Hard Memory Limit

Description

Maximum amount of memory that the Kudu Tablet Server will use before it starts rejecting all incoming writes.

Related Name

memory_limit_hard_bytes

Default Value

4 GiB

API Name

memory_limit_hard_bytes

Required

true

Kudu Metrics URL Parameters

Description

The URL query parameters to append to the `/metrics` URL when collecting Kudu metrics.

Related Name

metrics_url_parameters

Default Value

compact=1&level=info

API Name

metrics_url_parameters

Required

true

Tablet History Max Age

Description

The maximum amount of time, in seconds, to preserve tablet data history, including history required to perform diff scans and incremental backups. The duration defined by this parameter is also the maximum amount of time it is possible to wait after a full or incremental backup before performing the next incremental backup. Setting the value to -1 disables history removal.

Related Name

tablet_history_max_age_sec

Default Value

7 day(s)

API Name

tablet_history_max_age_sec

Required

true

Tablet Server Quiescing Interval

Description

Interval in seconds with which to check whether a Tablet Server has fully quiesced

Related Name

ts_quiescing_retry_interval_sec

Default Value

30

API Name

ts_quiescing_retry_interval_sec

Required

false

Maximum Allowed Runtime to Quiesce a Tablet Server

Description

Maximum time to wait for a Tablet Server to fully quiesce, relinquishing leadership of all Tablets and completion of all active scans.

Related Name

ts_quiescing_time_limit_sec

Default Value

1800

API Name

ts_quiescing_time_limit_sec

Required

false

Kudu Tablet Server Core Dump Directory

Description

If Enable Core Dump is set, Kudu Tablet Servers will dump cores to this location.

Related Name

tserver_core_dump_directory

Default Value

/var/log/kudu

API Name

tserver_core_dump_directory

Required

true

Kudu Tablet Server Web UI Interface

Description

The interface of the Kudu Tablet Server Web UI. If blank, binds to 0.0.0.0.

Related Name

webserver_interface

Default Value

API Name

webserver_interface

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Kudu Tablet Server Web UI Port

Description

The port of the Kudu Tablet Server Web UI.

Related Name

webserver_port

Default Value

8050

API Name

webserver_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for Tablet Server

Description

Encrypt communication between clients and Tablet Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

Tablet Server TLS/SSL Server CA Certificate (PEM Format)

Description

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

Default Value

API Name

ssl_server_ca_certificate_location

Required

false

Tablet Server TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_certificate_file

Default Value

API Name

ssl_server_certificate_location

Required

false

Tablet Server TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Tablet Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

webserver_private_key_file

Default Value

API Name

ssl_server_privatekey_location

Required

false

Tablet Server TLS/SSL Private Key Password

Description

The password for the private key in the Tablet Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

webserver_private_key_password_cmd

Default Value

API Name

ssl_server_privatekey_password

Required

false

Suppressions

Suppress Parameter Validation: Kudu Tablet Server Block Cache Capacity

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kudu Tablet Server Block Cache Capacity parameter.

Related Name

Default Value

false

API Name

role_config_suppression_block_cache_capacity_mb

Required

true

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Livy Properties in Cloudera Runtime 7.2.15

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/livy

API Name

client_config_root_dir

Required

true

Livy Client Advanced Configuration Snippet (Safety Valve) for livy-conf/livy-client.conf

Description

For advanced use only, a string to be inserted into the client configuration for livy-conf/livy-client.conf.

Related Name

Default Value

API Name

livy-conf/livy-client.conf_client_config_safety_valve

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

50

API Name

client_config_priority

Required

true

Security

Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

livy.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Trust Store Password

Description

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

livy.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

Suppress Parameter Validation: Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Livy Server

Advanced

Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

Description

For advanced use only. A string to be inserted into livy-conf/livy.conf for this role only.

Related Name

Default Value

API Name

livy-conf/livy.conf_role_safety_valve

Required

false

Livy Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

LIVY_SERVER_role_env_safety_valve

Required

false

Livy Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Livy Server Log Directory

Description

The log directory for log files of the role Livy Server.

Related Name

log_dir

Default Value

/var/log/livy

API Name

log_dir

Required

false

Livy Server Logging Threshold

Description

The minimum log level for Livy Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Livy Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Livy Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Livy Server Max Log Size

Description

The maximum size, in megabytes, per log file for Livy Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

livy_server_fd_thresholds

Required

false

Livy Server Host Health Test

Description

When computing the overall Livy Server health, consider the host's health.

Related Name

Default Value

true

API Name

livy_server_host_health_enabled

Required

false

Livy Server Process Health Test

Description

Enables the health test that the Livy Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

livy_server_scm_health_enabled

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Enable Access Control

Description

Perform access control when processing user requests.

Related Name

livy.server.access-control.enabled

Default Value

true

API Name

livy_access_control_enabled

Required

false

Admin Users

Description

List of users with admin permissions (can view and modify any session).

Related Name

livy.superusers

Default Value

knox zeppelin

API Name

livy_admin_users

Required

false

Extra JVM Options

Description

Command line options to add to the Livy Server JVM. May be used also to override options automatically added by CM.

Related Name

livy_extra_java_opts

Default Value

API Name

livy_extra_java_opts

Required

false

Enable User Impersonation

Description

Start applications as the requesting user, instead of using the Livy account.

Related Name

livy.impersonation.enabled

Default Value

true

API Name

livy_impersonation_enabled

Required

false

Max Header Size

Description

Maximum size of a header field accepted by the Livy server. May need to be increased in certain environments where SPNEGO is enabled.

Related Name

livy.server.request-header.size

Default Value

128 KiB

API Name

livy_max_header_size

Required

false

Java Heap Size of Livy Server

Description

Maximum size for the Java process heap memory.

Related Name

livy_max_heapsize

Default Value

512 MiB

API Name

livy_max_heapsize

Required

false

Enable RPC Encryption

Description

Enable encryption of communication between the Livy session and managed Spark sessions.

Related Name

livy_rpc_encryption_enabled

Default Value

true

API Name

livy_rpc_encryption_enabled

Required

false

Enable Livy Thrift Server

Description

Enables the Livy Thrift server

Related Name

livy.server.thrift.enabled

Default Value

false

API Name

livy_server_thrift_enabled

Required

false

Livy Thrift Server Transport Mode

Description

Transport mode used by the Livy Thrift server

Related Name

livy.server.thrift.transport.mode

Default Value

binary

API Name

livy_server_thrift_transport_mode

Required

false

Enable Session Recovery

Description

Enable recovery of live sessions when the Livy server restarts. Uses HDFS to store recovery information.

Related Name

livy_session_recovery_enabled

Default Value

true

API Name

livy_session_recovery_enabled

Required

false

Enable User Authentication

Description

Enables user authentication using SPNEGO when Kerberos is enabled.

Related Name

livy_spnego_enabled

Default Value

true

API Name

livy_spnego_enabled

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Livy Server Port

Description

The port of the Livy server

Related Name

livy.server.port

Default Value

8998

API Name

livy_server_port

Required

false

Livy Thrift Server Port

Description

The port of the Livy Thrift server

Related Name

livy.server.thrift.port

Default Value

10090

API Name

livy_server_thrift_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for Livy Server

Description

Encrypt communication between clients and Livy Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

livy.tls.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Livy Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Livy Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

livy.keystore

Default Value

API Name

ssl_server_keystore_location

Required

false

Livy Server TLS/SSL Server Keystore File Password

Description

The password for the Livy Server keystore file.

Related Name

livy.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Server Advanced Configuration Snippet (Safety Valve) for livy-conf/livy.conf parameter.

Related Name

Default Value

false

API Name

role_config_suppression_livy-conf/livy.conf_role_safety_valve

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Gateway TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Gateway TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Livy Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Livy Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Livy Server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Recovery Directory (HDFS)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Recovery Directory (HDFS) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_livy_recovery_dir

Required

true

Suppress Configuration Validator: Livy Server Count Validator

Description

Whether to suppress configuration warnings produced by the Livy Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_livy_server_count_validator

Required

true

Suppress Parameter Validation: Livy Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Livy Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_livy_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Livy Server Health

Description

Whether to suppress the results of the Livy Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_livy_livy_livy_server_health

Required

true

Oozie Properties in Cloudera Runtime 7.2.15

Role groups:

Oozie Server

Advanced

Oozie Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Oozie Server Advanced Configuration Snippet (Safety Valve) for action-conf/default.xml

Description

For advanced use only. A string to be inserted into action-conf/default.xml for this role only.

Related Name

Default Value

API Name

oozie_action_config_default_safety_valve

Required

false

Oozie Server Advanced Configuration Snippet (Safety Valve) for oozie-site.xml

Description

For advanced use only. A string to be inserted into oozie-site.xml for this role only.

Related Name

Default Value

API Name

oozie_config_safety_valve

Required

false

Oozie ActionService Executor Extension Classes

Description

Comma-separated list of ActionService executor extension classes. Only action types with associated executors can be used in workflows. For CDH 5.4 and higher, this parameter is used only to specify additional classes for workflows. All executor extension classes included in that release will be added automatically and do not need to be specified.

Related Name

oozie.service.ActionService.executor.ext.classes

Default Value

API Name

oozie_executor_extension_classes

Required

false

Java Configuration Options for Oozie Server

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name

Default Value

-XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:G1HeapRegionSize=16M -XX:MinMetaspaceFreeRatio=50 -XX:MaxMetaspaceFreeRatio=80 -XX:+DisableExplicitGC

API Name

oozie_java_opts

Required

false

Directory For JSP Temp Files

Description

Directory to use to for temporary JSP file storage.

Related Name

oozie.jsp.tmp.dir

Default Value

/tmp

API Name

oozie_jsp_tmp_dir

Required

false

Default Launcher Max Attempts

Description

The default YARN maximal attempt count of the Launcher ApplicationMaster.

Related Name

oozie.launcher.default.max.attempts

Default Value

2

API Name

oozie_launcher_default_max_attempts

Required

false

Default Launcher Memory

Description

The default amount of memory in MiB that is allocated for the Launcher ApplicationMasters.

Related Name

oozie.launcher.default.memory.mb

Default Value

2 GiB

API Name

oozie_launcher_default_memory

Required

false

Default Launcher Queue

Description

The default YARN pool where the Launcher ApplicationMaster is placed.

Related Name

oozie.launcher.default.queue

Default Value

default

API Name

oozie_launcher_default_queue

Required

false

Oozie Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

OOZIE_SERVER_role_env_safety_valve

Required

false

Oozie HTTP Request Header Size

Description

Controls the size of the HTTP request header.

Related Name

oozie.http.request.header.size

Default Value

64 KiB

API Name

oozie_service_http_request_header_size

Required

false

Oozie HTTP Response Header Size

Description

Controls the size of the HTTP response header.

Related Name

oozie.http.response.header.size

Default Value

64 KiB

API Name

oozie_service_http_response_header_size

Required

false

Oozie SchemaService Workflow Extension Schemas

Description

Comma-separated list of SchemaService workflow extension schemas for additional action types. From CDH 5.4 and higher, this parameter is used only to specify additional schemas for workflows. All schemas included in that release will be added automatically and do not need to be specified.

Related Name

oozie.service.SchemaService.wf.ext.schemas

Default Value

API Name

oozie_workflow_extension_schemas

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Database

Oozie Server Data Directory

Description

Directory where the Oozie Server places its data. Only applicable when using Derby as the database type.

Related Name

Default Value

/var/lib/oozie/data

API Name

oozie_data_dir

Required

false

Oozie Server Database Host

Description

Hostname of the database used by Oozie Server. If the port is non-default for your database type, use host:port notation. Does not apply if you are using Derby as the database type.

Related Name

Default Value

localhost

API Name

oozie_database_host

Required

false

Oozie Server Database Name

Description

Name of the database used by Oozie Server.

Related Name

Default Value

oozie

API Name

oozie_database_name

Required

false

Oozie Server Database Password

Description

Password for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

Related Name

oozie.service.JPAService.jdbc.password

Default Value

API Name

oozie_database_password

Required

false

Oozie Server Database Type

Description

Type of the database used by Oozie Server.

Related Name

Default Value

derby

API Name

oozie_database_type

Required

false

Oozie Server Database User

Description

Username for connecting to the database used by Oozie Server. Does not apply if you are using Derby as the database type.

Related Name

oozie.service.JPAService.jdbc.username

Default Value

sa

API Name

oozie_database_user

Required

false

Logs

Oozie Server Logging Threshold

Description

The minimum log level for Oozie Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Oozie Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Oozie Server logs. Typically used by log4j or logback.

Related Name

Default Value

720

API Name

max_log_backup_index

Required

false

Oozie Server Log Directory

Description

Directory where Oozie Server will place its log files.

Related Name

Default Value

/var/log/oozie

API Name

oozie_log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Workflow Status Metrics Collection Interval

Description

Workflow Status metrics collection interval.

Related Name

oozie.service.DBLiteWorkflowStoreService.status.metrics.collection.interval

Default Value

1 minute(s)

API Name

oozie_job_metric_collection_interval

Required

false

Oozie Server Callable Queue Monitoring Threshold

Description

The health test thresholds of the weighted average size of the Oozie Server callable queue over a recent period. See also Oozie Server Callable Queue Monitoring Period.

Related Name

Default Value

Warning: 80.0 %, Critical: 95.0 %

API Name

oozie_server_callable_queue_threshold

Required

false

Oozie Server Callable Queue Monitoring Period

Description

The period over which to compute the moving average of the callable queue size.

Related Name

Default Value

5 minute(s)

API Name

oozie_server_callable_queue_window

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

oozie_server_fd_thresholds

Required

false

Oozie Server Host Health Test

Description

When computing the overall Oozie Server health, consider the host's health.

Related Name

Default Value

true

API Name

oozie_server_host_health_enabled

Required

false

Pause Duration Thresholds

Description

The health test thresholds for the weighted average extra time the pause monitor spent paused. Specified as a percentage of elapsed wall clock time.

Related Name

Default Value

Warning: 30.0, Critical: 60.0

API Name

oozie_server_pause_duration_thresholds

Required

false

Pause Duration Monitoring Period

Description

The period to review when computing the moving average of extra time the pause monitor spent paused.

Related Name

Default Value

5 minute(s)

API Name

oozie_server_pause_duration_window

Required

false

Oozie Server Process Health Test

Description

Enables the health test that the Oozie Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

oozie_server_scm_health_enabled

Required

false

Enable Oozie Server Shared Libraries Version Check

Description

If true, enables version check for Oozie Server and installed shared libraries.

Related Name

Default Value

true

API Name

oozie_server_shared_lib_version_check_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name

Default Value

true

API Name

oozie_server_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name

Default Value

Warning: 10 second(s), Critical: Never

API Name

oozie_server_web_metric_collection_thresholds

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Oozie Email Action From Address

Description

The from address to be used for mailing all emails for Oozie email action

Related Name

oozie.email.from.address

Default Value

oozie@localhost

API Name

oozie_email_from_address

Required

false

Oozie Email Action SMTP Authentication Enabled

Description

Enable SMTP authentication for Oozie email action

Related Name

oozie.email.smtp.auth

Default Value

false

API Name

oozie_email_smtp_auth

Required

false

Oozie Email Action SMTP Host

Description

The SMTP server host to use for Oozie email action

Related Name

oozie.email.smtp.host

Default Value

API Name

oozie_email_smtp_host

Required

false

Oozie Email Action SMTP Authentication Password

Description

SMTP password for Oozie email action

Related Name

oozie.email.smtp.password

Default Value

API Name

oozie_email_smtp_password

Required

false

Oozie Email Action SMTP Authentication Username

Description

SMTP username for Oozie email action

Related Name

oozie.email.smtp.username

Default Value

API Name

oozie_email_smtp_username

Required

false

Oozie Server Plugins

Description

Comma-separated list of Oozie plug-ins to be activated. If one plugin cannot be loaded, all the plugins are ignored.

Related Name

oozie.services.ext

Default Value

API Name

oozie_plugins_list

Required

false

Maximum concurrency for a given callable type

Description

Maximum concurrency for a given callable type.. Each command is a callable type: submit, start, run, etc.. Each action type is a callable type: MapReduce, SSH, sub-workflow, etc. All commands that use action executors (action-start, action-end. etc.) use the action type as the callable type.

Related Name

oozie.service.CallableQueueService.callable.concurrency

Default Value

API Name

oozie_service_callablequeueservice_callable_concurrency

Required

false

Maximum Callable Queue Size

Description

Maximum callable queue size

Related Name

oozie.service.CallableQueueService.queue.size

Default Value

10000

API Name

oozie_service_callablequeueservice_queue_size

Required

false

Number Threads For Executing Callables

Description

Number of threads used for executing callables

Related Name

oozie.service.CallableQueueService.threads

Default Value

50

API Name

oozie_service_callablequeueservice_threads

Required

false

Enable The Metrics Instrumentation Service

Description

Whether to use the Codehale-based metrics for instrumentation. Enabling this disables the 'instrumentation' REST endpoint and enables the 'metrics' REST endpoint (*hostname:port*/v2/admin/metrics).

Related Name

Default Value

true

API Name

oozie_use_metric_instrumentation

Required

false

Enable Oozie Server Web Console

Description

If true, enables the Oozie Server web console. ExtJS 2.2 zip archive must be extracted to /var/lib/oozie on the same host as the Oozie Server.

Related Name

Default Value

false

API Name

oozie_web_console

Required

false

Days to Keep Completed Bundle Jobs

Description

Completed bundle jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.bundle.older.than

Default Value

7 day(s)

API Name

purgeservice_bundle_older_than

Required

false

Days to Keep Completed Coordinator Jobs

Description

Completed coordinator jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.coord.older.than

Default Value

7 day(s)

API Name

purgeservice_coord_older_than

Required

false

Days to Keep Completed Workflow Jobs

Description

Completed workflow jobs older than this value, in days, will be purged by the PurgeService.

Related Name

oozie.service.PurgeService.older.than

Default Value

30 day(s)

API Name

purgeservice_older_than

Required

false

Enable Purge for Long-Running Coordinator Jobs

Description

Whether to purge completed workflows and their corresponding coordinator actions of long-running coordinator jobs if the completed workflow jobs are older than the value specified in oozie.service.PurgeService.older.than.

Related Name

oozie.service.PurgeService.purge.old.coord.action

Default Value

true

API Name

purgeservice_purge_old_coord_action

Required

false

Performance

Default Launcher Virtual CPU Cores

Description

The default number of Virtual CPU Cores that are allocated for the Launcher ApplicationMasters.

Related Name

oozie.launcher.default.vcores

Default Value

1

API Name

oozie_launcher_default_vcores

Required

false

Oozie Server Threadpool Size

Description

Controls the threadpool size for the Oozie Server (both Jetty and Tomcat).

Related Name

oozie.server.threadpool.max.threads

Default Value

150

API Name

oozie_service_threadpool_max_threads

Required

false

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Oozie Email Action SMTP Port

Description

The SMTP server port to use for Oozie email action

Related Name

oozie.email.smtp.port

Default Value

25

API Name

oozie_email_smtp_prt

Required

false

Oozie HTTP Port

Description

Port of Oozie Server

Related Name

oozie.http.port

Default Value

11000

API Name

oozie_http_port

Required

false

Oozie HTTPS Port

Description

Port of the Oozie Server when using TLS/SSL.

Related Name

oozie.https.port

Default Value

11443

API Name

oozie_https_port

Required

false

Resource Management

Java Heap Size of Oozie Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

oozie_java_heapsize

Required

false

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Excluded Cipher Suites

Description

List of cipher suite names that should be excluded.

Related Name

oozie.https.exclude.cipher.suites

Default Value

TLS_ECDHE_RSA_WITH_RC4_128_SHA
SSL_DHE_RSA_EXPORT_WITH_DES40_CBC_SHA SSL_RSA_WITH_DES_CBC_SHA
SSL_DHE_RSA_WITH_DES_CBC_SHA SSL_RSA_EXPORT_WITH_RC4_40_MD5
SSL_RSA_EXPORT_WITH_DES40_CBC_SHA SSL_RSA_WITH_RC4_128_MD5

API Name

oozie_https_exclude_cipher_suites

Required

false

Enabled TLS Protocols

Description

TLS protocols accepted by the Oozie Server.

Related Name

oozie.https.include.protocols

Default Value

SSLv2Hello, TLSv1, TLSv1.1, TLSv1.2

API Name

oozie_https_include_protocols

Required

false

Oozie TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Oozie is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

oozie.https.keystore.file

Default Value

/var/lib/oozie/.keystore

API Name

oozie_https_keystore_file

Required

false

Oozie TLS/SSL Server Keystore File Password

Description

The password for the Oozie keystore file.

Related Name

oozie.https.keystore.pass

Default Value

API Name

oozie_https_keystore_password

Required

false

Oozie TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Oozie might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

oozie.https.truststore.file

Default Value

API Name

oozie_https_truststore_file

Required

false

Oozie TLS/SSL Trust Store Password

Description

The password for the Oozie TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

oozie.https.truststore.pass

Default Value

API Name

oozie_https_truststore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

enable_config_alerts

Required

false

Healthy Oozie Server Monitoring Thresholds

Description

The health test thresholds of the overall Oozie Server health. The check returns "Concerning" health if the percentage of "Healthy" Oozie Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Oozie Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 51.0 %

API Name

oozie_servers_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", " streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Other

Hive Service

Description

Name of the Hive service that this Oozie service instance depends on. This is used to configure Oozie HCat integration.

Related Name

Default Value

API Name

hive_service

Required

API Name

log_threshold

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

50

API Name

client_config_priority

Required

true

Security

Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Gateway TLS/SSL Trust Store Password

Description

The password for the Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ozone Client Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Suppress Parameter Validation: Gateway TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Ozone DataNode

Advanced

Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/dn-audit-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/dn-audit-log4j2.properties for this role only.

Related Name

Default Value

API Name

ozone-conf/dn-audit-log4j2.properties_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone DataNode Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone DataNode Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

OZONE_DATANODE_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_username

Required

true

Logs

Ozone DataNode Log Directory

Description

The log directory for log files of the role Ozone DataNode.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Ozone DataNode Logging Threshold

Description

The minimum log level for Ozone DataNode logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ozone DataNode Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ozone DataNode logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ozone DataNode Max Log Size

Description

The maximum size, in megabytes, per log file for Ozone DataNode logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_datanode_fd_thresholds

Required

false

Ozone DataNode Host Health Test

Description

When computing the overall Ozone DataNode health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_datanode_host_health_enabled

Required

false

Ozone DataNode Process Health Test

Description

Enables the health test that the Ozone DataNode's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ozone_datanode_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

unexpected_exits_window

Required

false

Other

Datanode Ratis Metadata Directory

Description

One or more directories used for storing Datanode Ratis metadata. Ideally, this should be mapped to a fast disk like an SSD.

Related Name

dfs.container.ratis.datanode.storage.dir

Default Value

/var/lib/hadoop-ozone/datanode/ratis/data

API Name

dfs.container.ratis.datanode.storage.dir

Required

true

Datanode Data Directory

Description

Determines where on the local filesystem HDDS data will be stored.

Related Name

hdds.datanode.dir

Default Value

/var/lib/hadoop-ozone/datanode/data

API Name

hdds.datanode.dir

Required

true

Ozone Log Directory

Description

Directory where Ozone DataNode logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Datanode Metadata Directory

Description

Determines where on the local filesystem datanode security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/datanode/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Datanode ID Directory

Description

Ozone Datanode ID Directory

Related Name

ozone.scm.datanode.id.dir

Default Value

/var/lib/hadoop-ozone/datanode

API Name

ozone.scm.datanode.id.dir

Required

true

Java Heap Size of DataNode

Description

Maximum size for the Java process heap memory.

Related Name

ozone_datanode_heap_size

Default Value

4 GiB

API Name

ozone_datanode_heap_size

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Datanode Ratis IPC Port for Admin Requests

Description

The container IPC port number for admin requests.

Related Name

dfs.container.ratis.admin.port

Default Value

9857

API Name

dfs.container.ratis.admin.port

Required

true

Datanode Ratis IPC Port for Server-to-Server Communication

Description

The container IPC port number for server-to-server communication.

Related Name

dfs.container.ratis.server.port

Default Value

9856

API Name

dfs.container.ratis.server.port

Required

true

Ozone Datanode HTTP Web UI Port

Description

The base port that the Ozone Datanode web user interface listens on. The host name is combined with this port to form the 'hdds.datanode.http-address'.

Related Name

ozone.datanode.http-port

Default Value

9882

API Name

ozone.datanode.http-port

Required

true

Ozone Datanode Port (TLS/SSL)

Description

The base port that the Ozone Datanode web user interface listens on when using HTTPS. The host name is combined with this port to form the 'hdds.datanode.https-address'.

Related Name

ozone.datanode.https-port

Default Value

9883

API Name

ozone.datanode.https-port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ozone DataNode roles.

Related Name

Default Value

dn

API Name

kerberos_role_princ_name

Required

true

Ozone DataNode TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone DataNode might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Ozone DataNode TLS/SSL Trust Store Password

Description

The password for the Ozone DataNode TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone DataNode

Description

Encrypt communication between clients and Ozone DataNode using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone DataNode TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Ozone DataNode is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Ozone DataNode TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone DataNode is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Ozone DataNode TLS/SSL Server Keystore File Password

Description

The password for the Ozone DataNode keystore file.

Related Name

ssl.server.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Datanode Ratis IPC Port for Admin Requests

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis IPC Port for Admin Requests parameter.

Related Name

Default Value

false

API Name

role_config_suppression_dfs.container.ratis.admin.port

Required

true

Suppress Parameter Validation: Datanode Ratis Metadata Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis Metadata Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_dfs.container.ratis.datanode.storage.dir

Required

true

Suppress Parameter Validation: Datanode Ratis IPC Port for Server-to-Server Communication

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Ratis IPC Port for Server-to-Server Communication parameter.

Related Name

Default Value

false

API Name

role_config_suppression_dfs.container.ratis.server.port

Required

true

Suppress Parameter Validation: Datanode Data Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Data Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.datanode.dir

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone DataNode Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

Ozone Manager

Advanced

Ozone Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/om-audit-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/om-audit-log4j2.properties for this role only.

Related Name

Default Value

API Name

ozone-conf/om-audit-log4j2.properties_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-audit.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-audit.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ranger-ozone-audit.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ranger-ozone-policymgr-ssl.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ranger-ozone-security.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ranger-ozone-security.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ranger-ozone-security.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Ozone Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Ozone Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

OZONE_MANAGER_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

API Name

process_username

Required

true

Logs

Ozone Manager Log Directory

Description

The log directory for log files of the role Ozone Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Ozone Manager Logging Threshold

Description

The minimum log level for Ozone Manager logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ozone Manager Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ozone Manager logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ozone Manager Max Log Size

Description

The maximum size, in megabytes, per log file for Ozone Manager logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_manager_fd_thresholds

Required

false

Ozone Manager Host Health Test

Description

When computing the overall Ozone Manager health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_manager_host_health_enabled

Required

false

Ozone Manager Process Health Test

Description

Enables the health test that the Ozone Manager's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ozone_manager_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Java Heap Size of Ozone Manager

Description

Maximum size for the Java process heap memory.

Related Name

om_max_heap_size

Default Value

4 GiB

API Name

om_max_heap_size

Required

false

Ozone Filesystem Trash Checkpoint Interval

Description

Number of minutes between trash checkpoints

Related Name

ozone.fs.trash.checkpoint.interval

Default Value

1 hour(s)

API Name

ozone.fs.trash.checkpoint.interval

Required

false

Ozone Filesystem Trash Interval

Description

Controls the number of minutes after which a trash checkpoint directory is deleted permanently

Related Name

ozone.fs.trash.interval

Default Value

1 day(s)

API Name

ozone.fs.trash.interval

Required

false

Ozone Log Directory

Description

Directory where Ozone Manager logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Ozone Manager Metadata Directory

Description

Determines where on the local filesystem Ozone Manager security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/om/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Ozone Manager Data Directory

Description

Directory where the OzoneManager stores its metadata.

Related Name

ozone.om.db.dirs

Default Value

/var/lib/hadoop-ozone/om/data

API Name

ozone.om.db.dirs

Required

true

Ozone Manager HTTP Bind Hostname

Description

The actual address the OM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.om.http-address'.

Related Name

ozone.om.http-bind-host

Default Value

0.0.0.0

API Name

ozone.om.http-bind-host

Required

false

Secure Ozone Manager HTTPS Bind Hostname

Description

The actual address the OM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.om.https-address'.

Related Name

ozone.om.https-bind-host

Default Value

0.0.0.0

API Name

ozone.om.https-bind-host

Required

false

Ozone Manager Ratis Storage Directory

Description

This directory is used for storing Ozone Manager's Ratis metadata like logs. Ideally, this should be mapped to a fast disk like an SSD.

Related Name

ozone.om.ratis.storage.dir

Default Value

/var/lib/hadoop-ozone/om/ratis

API Name

ozone.om.ratis.storage.dir

Required

true

Ranger Ozone Plugin Conf Path

Description

Staging directory for Ranger Ozone Plugin Configuration. This should generally not be changed.

Related Name

ranger_ozone_plugin_conf_path

Default Value

/etc/ranger/ozone-plugin

API Name

ranger_ozone_plugin_conf_path

Required

true

Ranger Ozone Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.ozone.policy.cache.dir

Default Value

/var/lib/ranger/ozone/policy-cache

API Name

ranger_ozone_plugin_policy_cache_directory

Required

true

Ranger Ozone Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/hadoop-ozone/ranger-audit/solr/spool

API Name

ranger_ozone_plugin_solr_audit_spool_directory

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Ozone Manager HTTP Web UI Port

Description

The base port that the Ozone Manager HTTP web user interface listens on. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.http-address'.

Related Name

ozone.om.http-port

Default Value

9874

API Name

ozone.om.http-port

Required

true

Secure Ozone Manager Web UI Port (TLS/SSL)

Description

The base port that the Ozone Manager HTTP web user interface listens on when using HTTPS. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.https-address'.

Related Name

ozone.om.https-port

Default Value

9875

API Name

ozone.om.https-port

Required

false

Ozone Manager Ratis port

Description

The base port that Ozone Manager's Ratis Server listens on if multiple Ozone Manager's are configured.

Related Name

ozone.om.ratis-port

Default Value

9872

API Name

ozone.om.ratis-port

Required

false

Ozone Manager RPC port

Description

The base port that Ozone Manager listens on when serving RPCs. The host name of the Ozone Manager is combined with this port to form the 'ozone.om.address'.

Related Name

ozone.om.rpc-port

Default Value

9862

API Name

ozone.om.rpc-port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when

the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page

cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ozone Manager roles.

Related Name

Default Value

om

API Name

kerberos_role_princ_name

Required

true

Ozone Manager TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Manager might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Ozone Manager TLS/SSL Trust Store Password

Description

The password for the Ozone Manager TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone Manager

Description

Encrypt communication between clients and Ozone Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone Manager TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Ozone Manager is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Ozone Manager TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Manager is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Ozone Manager TLS/SSL Server Keystore File Password

Description

The password for the Ozone Manager keystore file.

Related Name

ssl.server.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

Ozone Prometheus

Advanced

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-prometheus.yml for this role only.

Related Name

Default Value

API Name

ozone-conf/ozone-prometheus.yml_role_safety_valve

Required

false

Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/prometheus-token

Description

For advanced use only. A string to be inserted into ozone-conf/prometheus-token for this role only.

Related Name

Default Value

API Name

ozone-conf/prometheus-token_role_safety_valve

Required

false

Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

OZONE_PROMETHEUS_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_username

Required

true

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_prometheus_fd_thresholds

Required

false

Ozone Prometheus Host Health Test

Description

When computing the overall Ozone Prometheus health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_prometheus_host_health_enabled

Required

false

Ozone Prometheus Process Health Test

Description

Enables the health test that the Ozone Prometheus's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ozone_prometheus_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ozone Log Directory

Description

Directory where Prometheus logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

CA File Path

Description

Location of the CA File for Prometheus

Related Name

ozone.prometheus.ca.file

Default Value

AUTO_TLS_CA_FILE

API Name

ozone.prometheus.ca.file

Required

false

Prometheus Data Retention time.

Description

How long to retain samples in storage. Units Supported: y, w, d, h, m, s, ms.

Related Name

ozone.prometheus.data.retention.time

Default Value

15d

API Name

ozone.prometheus.data.retention.time

Required

false

Prometheus Data Directory

Description

Directory where the Prometheus Server stores its metadata.

Related Name

ozone.prometheus.db.dir

Default Value

/var/lib/hadoop-ozone/prometheus/data

API Name

ozone.prometheus.db.dir

Required

true

Prometheus server extra flags.

Description

Extra command line flags that can be used while starting up the server. For example, '--query.timeout=2m --query.max-samples=5000'

Related Name

ozone.prometheus.extra.flags

Default Value

API Name

ozone.prometheus.extra.flags

Required

false

Prometheus server log level.

Description

Only log messages with the given severity or above. One of: [debug, info, warn, error]

Related Name

ozone.prometheus.log.level

Default Value

info

API Name

ozone.prometheus.log.level

Required

false

Prometheus Binary Location

Description

Location of the unarchived Prometheus binary.

Related Name

prometheus.location

Default Value

API Name

prometheus.location

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Prometheus HTTP Port

Description

The base port that the prometheus web user interface listens on.

Related Name

ozone.prometheus.http-port

Default Value

9094

API Name

ozone.prometheus.http-port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-prometheus.yml parameter.

Related Name

Default Value

false

API Name

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ozone_recon_fd_thresholds

Required

false

Ozone Recon Host Health Test

Description

When computing the overall Ozone Recon health, consider the host's health.

Related Name

Default Value

true

API Name

ozone_recon_host_health_enabled

Required

false

Ozone Recon Process Health Test

Description

Enables the health test that the Ozone Recon's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ozone_recon_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ozone Log Directory

Description

Directory where Recon logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Recon Metadata Directory

Description

Determines where on the local filesystem recon security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/recon/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Recon Data Directory

Description

Directory where the Recon Server stores its metadata.

Related Name

ozone.recon.db.dir

Default Value

/var/lib/hadoop-ozone/recon/data

API Name

ozone.recon.db.dir

Required

true

Recon HTTP Bind Hostname

Description

The actual address the Recon web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.recon.http-address'.

Related Name

ozone.recon.http-bind-host

Default Value

0.0.0.0

API Name

ozone.recon.http-bind-host

Required

false

Secure Recon HTTPS Bind Hostname

Description

The actual address the Recon web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.recon.https-address'.

Related Name

ozone.recon.https-bind-host

Default Value

0.0.0.0

API Name

ozone.recon.https-bind-host

Required

false

Recon OzoneManager Data Directory

Description

Directory where the Recon Server stores OzoneManager's metadata

Related Name

ozone.recon.om.db.dir

Default Value

/var/lib/hadoop-ozone/recon/om/data

API Name

ozone.recon.om.db.dir

Required

true

Recon StorageContainerManager Data Directory

Description

Directory where the Recon Server stores StorageContainerManager's metadata

Related Name

ozone.recon.scm.db.dirs

Default Value

/var/lib/hadoop-ozone/recon/scm/data

API Name

ozone.recon.scm.db.dirs

Required

true

Java Heap Size of Recon

Description

Maximum size for the Java process heap memory.

Related Name

ozone_recon_max_heap_size

Default Value

1 GiB

API Name

ozone_recon_max_heap_size

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Recon HTTP Web UI Port

Description

The base port that the Recon web user interface listens on. The host name of the Recon web user interface is combined with this port to form the 'ozone.recon.http-address'.

Related Name

ozone.recon.http-port

Default Value

9888

API Name

ozone.recon.http-port

Required

true

Secure Recon Web UI Port (TLS/SSL)

Description

The base port that the Recon web user interface listens on when using HTTPS. The host name of the Recon web user interface is combined with this port to form the 'ozone.recon.https-address'.

Related Name

ozone.recon.https-port

Default Value

9889

API Name

ozone.recon.https-port

Required

false

Recon RPC Port

Description

The base port that Recon listens on when serving RPCs. The host name of Recon is combined with this port to form the 'ozone.recon.address'.

Related Name

ozone.recon.rpc-port

Default Value

9891

API Name

ozone.recon.rpc-port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Ozone Recon roles.

Related Name

Default Value

recon

API Name

kerberos_role_princ_name

Required

true

Ozone Recon TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ozone Recon might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Ozone Recon TLS/SSL Trust Store Password

Description

The password for the Ozone Recon TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ozone Recon

Description

Encrypt communication between clients and Ozone Recon using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ozone Recon TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Ozone Recon is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Ozone Recon TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ozone Recon is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Ozone Recon TLS/SSL Server Keystore File Password

Description

The password for the Ozone Recon keystore file.

Related Name

ssl.server.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Ozone Recon Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Recon Logging Advanced Configuration Snippet (Safety Valve) parameter.

S3 Gateway

Advanced

S3 Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

S3 Gateway Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_username

Required

true

S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

S3_GATEWAY_role_env_safety_valve

Required

false

Logs

S3 Gateway Log Directory

Description

The log directory for log files of the role S3 Gateway.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

S3 Gateway Logging Threshold

Description

The minimum log level for S3 Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

S3 Gateway Maximum Log File Backups

Description

The maximum number of rolled log files to keep for S3 Gateway logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

S3 Gateway Max Log Size

Description

The maximum size, in megabytes, per log file for S3 Gateway logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

s3_gateway_fd_thresholds

Required

false

S3 Gateway Host Health Test

Description

When computing the overall S3 Gateway health, consider the host's health.

Related Name

Default Value

true

API Name

s3_gateway_host_health_enabled

Required

false

S3 Gateway Process Health Test

Description

Enables the health test that the S3 Gateway's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

s3_gateway_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ozone S3G Log Directory

Description

Directory where Ozone S3G logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Ozone S3 Gateway HTTP Bind Hostname

Description

The actual address the S3 Gateway web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.s3g.http-address'.

Related Name

ozone.s3g.http-bind-host

Default Value

0.0.0.0

API Name

ozone.s3g.http-bind-host

Required

false

Secure Ozone S3 Gateway HTTPS Bind Hostname

Description

The actual address the S3 Gateway web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.s3g.https-address'.

Related Name

ozone.s3g.https-bind-host

Default Value

0.0.0.0

API Name

ozone.s3g.https-bind-host

Required

false

Java Heap Size of S3 Gateway

Description

Maximum size for the Java process heap memory.

Related Name

ozone_S3_gateway_max_heap_size

Default Value

1 GiB

API Name

ozone_S3_gateway_max_heap_size

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Ozone S3 Gateway HTTP Web UI Port

Description

The base port that the S3 Gateway web user interface listens on. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.http-address'.

Related Name

ozone.s3g.http-port

Default Value

9878

API Name

ozone.s3g.http-port

Required

true

Secure Ozone S3 Gateway Web UI Port (TLS/SSL)

Description

The base port that the S3 Gateway web user interface listens on when using HTTPS. The host name of the S3 Gateway is combined with this port to form the 'ozone.s3g.https-address'.

Related Name

ozone.s3g.https-port

Default Value

9879

API Name

ozone.s3g.https-port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the S3 Gateway roles.

Related Name

Default Value

s3g

API Name

kerberos_role_princ_name

Required

true

S3 Gateway TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that S3 Gateway might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

S3 Gateway TLS/SSL Trust Store Password

Description

The password for the S3 Gateway TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for S3 Gateway

Description

Encrypt communication between clients and S3 Gateway using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

S3 Gateway TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when S3 Gateway is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

S3 Gateway TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when S3 Gateway is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

S3 Gateway TLS/SSL Server Keystore File Password

Description

The password for the S3 Gateway keystore file.

Related Name

ssl.server.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Other

Ozone Proxy User Groups

Description

Comma-delimited list of groups to allow the Ozone user to impersonate.To disable entirely, use a string that does not correspond to a group name, such as '_no_group_

Related Name

hadoop.proxyuser.om.groups

Default Value

*

API Name

hadoop.proxyuser.om.groups

Required

true

Ozone Proxy User Hosts

Description

Comma-delimited list of hosts to allow the Ozone user to impersonate.To disable entirely, use a string that does not correspond to a group name, such as '_no_group_

Related Name

hadoop.proxyuser.om.hosts

Default Value

*

API Name

hadoop.proxyuser.om.hosts

Required

true

Enable HDDS gRPC Server TLS

Description

Enable HDDS gRPC server TLS on this cluster. Please note this won't take effect unless Kerberos Authentication (ozone.security.enabled) is enabled as well.

Related Name

hdds.grpc.tls.enabled

Default Value

false

API Name

hdds.grpc.tls.enabled

Required

false

Ozone Prometheus Endpoint Token

Description

Enables token based authentication for Prometheus servlet endpoints. This will disable SPNEGO based authentication on the endpoints.

Related Name

hdds.prometheus.endpoint.token

Default Value

API Name

hdds.prometheus.endpoint.token

Required

false

HDFS Service

Description

Name of the HDFS service that this Ozone service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

false

Ozone Administrators

Description

A comma separated list of Kerberos principals of Ozone Administrators. This will be effective only when security is enabled.

Related Name

ozone.administrators

Default Value

API Name

ozone.administrators

Required

false

Ozone Replication Factor

Description

Default replication factor value for keys stored in Ozone. The actual number of replications can be specified when writing the key. The default is used if replication value is not specified. Supported values: 1 and 3.

Related Name

ozone.replication

Default Value

3

API Name

ozone.replication

Required

true

Ozone SCM Primordial Node ID

Description

SCM Primordial Node ID is the hostname of the SCM which should act as a Root Certificate Authority(CA) for Ozone during security initialization. It is mandatory to have a Primordial Node ID when there is more than one SCM instance configured.

Related Name

ozone.scm.primordial.node.id

Default Value

API Name

ozone.scm.primordial.node.id

Required

false

Ozone SCM Service ID

Description

A logical name for this Ozone SCM service. Note: No special characters.

Related Name

role_config_suppression_ozone_manager_role_env_safety_valve

Required

true

Suppress Configuration Validator: Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ozone Prometheus Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_prometheus_role_env_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of Recon

Description

Whether to suppress configuration warnings produced by the Java Heap Size of Recon configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_recon_max_heap_size

Required

true

Suppress Configuration Validator: Ozone Recon Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ozone Recon Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_recon_role_env_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of S3 Gateway

Description

Whether to suppress configuration warnings produced by the Java Heap Size of S3 Gateway configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ozone_s3_gateway_max_heap_size

Required

true

Suppress Configuration Validator: Role Specific System Group

Description

Whether to suppress configuration warnings produced by the Role Specific System Group configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Configuration Validator: Role Specific System User

Description

Whether to suppress configuration warnings produced by the Role Specific System User configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_process_username

Required

true

Suppress Configuration Validator: Prometheus Binary Location

Description

Whether to suppress configuration warnings produced by the Prometheus Binary Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_prometheus.location

Required

true

Suppress Configuration Validator: Ranger Ozone Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Conf Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ozone_plugin_conf_path

Required

true

Suppress Configuration Validator: Ranger Ozone Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Policy Cache Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ozone_plugin_policy_cache_directory

Required

true

Suppress Configuration Validator: Ranger Ozone Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the Ranger Ozone Plugin Audit Solr Spool Directory Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ozone_plugin_solr_audit_spool_directory

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: S3 Gateway Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the S3 Gateway Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_s3_gateway_role_env_safety_valve

Required

true

Suppress Configuration Validator: Java Heap Size of Storage Container Manager

Description

Whether to suppress configuration warnings produced by the Java Heap Size of Storage Container Manager configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_scm_max_heap_size

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore Key Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Storage Container Manager TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Storage Container Manager TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_storage_container_manager_role_env_safety_valve

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Ozone Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Proxy User Groups parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hadoop.proxyuser.om.groups

Required

true

Suppress Parameter Validation: Ozone Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Proxy User Hosts parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hadoop.proxyuser.om.hosts

Required

true

Suppress Parameter Validation: Ozone Prometheus Endpoint Token

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Prometheus Endpoint Token parameter.

Related Name

Default Value

false

API Name

service_config_suppression_hdds.prometheus.endpoint.token

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone-conf/ozone-site.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone-conf/ssl-client.xml_service_safety_valve

Required

true

Suppress Parameter Validation: Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone-conf/ssl-server.xml_service_safety_valve

Required

Suppress Parameter Validation: Ozone Administrators

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Administrators parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone.administrators

Required

true

Suppress Parameter Validation: Ozone SCM Primordial Node ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone SCM Primordial Node ID parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone.scm.primordial.node.id

Required

true

Suppress Parameter Validation: Ozone SCM Service ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone SCM Service ID parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone.scm.service.id

Required

true

Suppress Parameter Validation: Ozone Service ID

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service ID parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone.service.id

Required

true

Suppress Configuration Validator: Ozone DataNode Count Validator

Description

Whether to suppress configuration warnings produced by the Ozone DataNode Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_ozone_datanode_count_validator

Required

true

Suppress Parameter Validation: Ozone Java Options

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Java Options parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone_java_opts

Required

true

Suppress Configuration Validator: Ozone Manager Count Validator

Description

Whether to suppress configuration warnings produced by the Ozone Manager Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_ozone_manager_count_validator

Required

true

Suppress Configuration Validator: Ozone Prometheus Count Validator

Description

Whether to suppress configuration warnings produced by the Ozone Prometheus Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_ozone_prometheus_count_validator

Required

true

Suppress Configuration Validator: Ozone Recon Count Validator

Description

Whether to suppress configuration warnings produced by the Ozone Recon Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_ozone_recon_count_validator

Required

true

Suppress Parameter Validation: Ozone Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ozone_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Ozone Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Ozone Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_ozone_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: S3 Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the S3 Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_s3_gateway_count_validator

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Configuration Validator: Storage Container Manager Count Validator

Description

Whether to suppress configuration warnings produced by the Storage Container Manager Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_storage_container_manager_count_validator

Required

true

Storage Container Manager

Advanced

Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml

Description

For advanced use only. A string to be inserted into ozone-conf/hadoop-policy.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/hadoop-policy.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ozone-site.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ozone-site.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties

Description

For advanced use only. A string to be inserted into ozone-conf/scm-audit-log4j2.properties for this role only.

Related Name

Default Value

API Name

ozone-conf/scm-audit-log4j2.properties_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-client.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-client.xml_role_safety_valve

Required

false

Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

For advanced use only. A string to be inserted into ozone-conf/ssl-server.xml for this role only.

Related Name

Default Value

API Name

ozone-conf/ssl-server.xml_role_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Role Specific System Group

Description

The group that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_groupname

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Role Specific System User

Description

The user that this role's processes should run as.

Related Name

Default Value

hdfs

API Name

process_username

Required

true

Storage Container Manager Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STORAGE_CONTAINER_MANAGER_role_env_safety_valve

Required

false

Logs

Storage Container Manager Log Directory

Description

The log directory for log files of the role Storage Container Manager.

Related Name

log.dir

Default Value

/var/log/hadoop-ozone

API Name

log_dir

Required

false

Storage Container Manager Logging Threshold

Description

The minimum log level for Storage Container Manager logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Storage Container Manager Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Storage Container Manager logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Storage Container Manager Max Log Size

Description

The maximum size, in megabytes, per log file for Storage Container Manager logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

storage_container_manager_fd_thresholds

Required

false

Storage Container Manager Host Health Test

Description

When computing the overall Storage Container Manager health, consider the host's health.

Related Name

Default Value

true

API Name

storage_container_manager_host_health_enabled

Required

false

Storage Container Manager Process Health Test

Description

Enables the health test that the Storage Container Manager's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

storage_container_manager_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Balancing Interval

Description

The interval period between each iteration of Container Balancer. Units Supported: d, h, m, s, ms.

Related Name

hdds.container.balancer.balancing.iteration.interval

Default Value

70m

API Name

hdds.container.balancer.balancing.iteration.interval

Required

false

Maximum Percentage of Datanodes Involved in Balancing

Description

Maximum percentage of healthy, in-service datanodes that can be involved in balancing in one iteration (for example, '20' for 20%).

Related Name

hdds.container.balancer.datanodes.involved.max.percentage.per.iteration

Default Value

20

API Name

hdds.container.balancer.datanodes.involved.max.percentage.per.iteration

Required

false

Exclude Containers from Balancing

Description

Containers to exclude from balancing. Specified as a string of Container IDs (for example, '1, 2, 3').

Related Name

hdds.container.balancer.exclude.containers

Default Value

API Name

hdds.container.balancer.exclude.containers

Required

false

Exclude Datanodes

Description

A comma separated string of Datanode hostnames or IP addresses that will be excluded from balancing.

Related Name

hdds.container.balancer.exclude.datanodes

Default Value

API Name

hdds.container.balancer.exclude.datanodes

Required

false

Include Datanodes

Description

A comma separated string of Datanode hostnames or IP addresses that will be the only participants in balancing.

Related Name

hdds.container.balancer.include.datanodes

Default Value

API Name

hdds.container.balancer.include.datanodes

Required

false

Number of Balancing Iterations

Description

Number of iterations that Container Balancer will run for.

Related Name

hdds.container.balancer.iterations

Default Value

10

API Name

hdds.container.balancer.iterations

Required

false

Container Move Timeout

Description

The amount of time to allow a single container to move from source to target. Units Supported: d, h, m, s, ms.

Related Name

hdds.container.balancer.move.timeout

Default Value

30m

API Name

hdds.container.balancer.move.timeout

Required

false

Maximum Size Entering Target

Description

The maximum size that can enter a target datanode in each iteration while balancing. This is the sum of data from multiple sources. Units supported: eb, pb, tb, gb, mb, kb, b.

Related Name

hdds.container.balancer.size.entering.target.max

Default Value

26gb

API Name

hdds.container.balancer.size.entering.target.max

Required

false

Maximum Size Leaving Source

Description

The maximum size that can leave a source datanode in each iteration while balancing. This is the sum of data moving to multiple targets. Units supported: eb, pb, tb, gb, mb, kb, b.

Related Name

hdds.container.balancer.size.leaving.source.max

Default Value

26gb

API Name

hdds.container.balancer.size.leaving.source.max

Required

false

Maximum Size to Move in Balancing

Description

The maximum size of data that will be moved by Container Balancer in one iteration. Units supported: eb, pb, tb, gb, mb, kb, b.

Related Name

hdds.container.balancer.size.moved.max.per.iteration

Default Value

500gb

API Name

hdds.container.balancer.size.moved.max.per.iteration

Required

false

Balancing Threshold

Description

The percentage deviation from average utilization, after which a node will be rebalanced (for example, '10' for 10%).

Related Name

hdds.container.balancer.utilization.threshold

Default Value

10.0

API Name

hdds.container.balancer.utilization.threshold

Required

false

Datanode Container Protocol ACL

Description

ACLs that define which users can access the Datanode Container Protocol in SCM. It is a comma separated list of Kerberos Principals.

Related Name

hdds.security.client.datanode.container.protocol.acl

Default Value

OZONE_SERVICE_PRINCIPALS

API Name

hdds.security.client.datanode.container.protocol.acl

Required

false

SCM Client Certificate Protocol ACL

Description

ACLs that define which users can access the SCM Certificate Protocol. It is a comma separated list of Kerberos Principals.

Related Name

hdds.security.client.scm.certificate.protocol.acl

Default Value

OZONE_ADMINS, OZONE_SERVICE_PRINCIPALS

API Name

hdds.security.client.scm.certificate.protocol.acl

Required

false

Topology Script File Name

Description

Full path to a custom topology script on the host file system. The topology script is used to determine the rack location of nodes. If left with "{{DEFAULT_TOPOLOGY_SCRIPT}}", a topology script will be provided that uses your hosts' rack information, visible in the "Hosts" page.

Related Name

net.topology.script.file.name

Default Value

DEFAULT_TOPOLOGY_SCRIPT

API Name

net.topology.script.file.name

Required

false

Ozone Log Directory

Description

Directory where Storage Container Manager logs will be written to

Related Name

ozone.log.dir

Default Value

/var/log/hadoop-ozone

API Name

ozone.log.dir

Required

false

Storage Container Manager Metadata Directory

Description

Determines where on the local filesystem SCM security certificates will be stored.

Related Name

ozone.metadata.dirs

Default Value

/var/lib/hadoop-ozone/scm/ozone-metadata

API Name

ozone.metadata.dirs

Required

true

Storage Container Manager Data Directory

Description

Directory where the StorageContainerManager stores its metadata

Related Name

ozone.scm.db.dirs

Default Value

/var/lib/hadoop-ozone/scm/data

API Name

ozone.scm.db.dirs

Required

true

Storage Container Manager Ratis Storage Directory

Description

Storage directory used by SCM to write Ratis logs.

Related Name

ozone.scm.ha.ratis.storage.dir

Default Value

/var/lib/hadoop-ozone/scm/ratis

API Name

ozone.scm.ha.ratis.storage.dir

Required

true

Storage Container Manager HTTP Bind Hostname

Description

The actual address the SCM web server will bind to. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.http-address'.

Related Name

ozone.scm.http-bind-host

Default Value

0.0.0.0

API Name

ozone.scm.http-bind-host

Required

false

Secure Storage Container Manager HTTPS Bind Hostname

Description

The actual address the SCM web server will bind to using HTTPS. If this optional address is set, it overrides only the hostname portion of 'ozone.scm.https-address'.

Related Name

ozone.scm.https-bind-host

Default Value

0.0.0.0

API Name

ozone.scm.https-bind-host

Required

false

Java Heap Size of Storage Container Manager

Description

Maximum size for the Java process heap memory.

Related Name

scm_max_heap_size

Default Value

4 GiB

API Name

scm_max_heap_size

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Storage Container Manager Block Client port

Description

The port number of the Ozone SCM block client service.

Related Name

ozone.scm.block.client.port

Default Value

9863

API Name

ozone.scm.block.client.port

Required

false

Storage Container Manager Client port

Description

The port number of the Ozone SCM block client service.

Related Name

ozone.scm.client.port

Default Value

9860

API Name

ozone.scm.client.port

Required

false

Storage Container Manager Datanode port

Description

The port number of the Ozone SCM service.

Related Name

ozone.scm.datanode.port

Default Value

9861

API Name

ozone.scm.datanode.port

Required

false

Storage Container Manager GRPC port

Description

Port used by SCM for Grpc Server.

Related Name

ozone.scm.grpc.port

Default Value

9895

API Name

ozone.scm.grpc.port

Required

false

Storage Container Manager HTTP Web UI Port

Description

The base port that the Storage Container Manager web user interface listens on. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.http-address'.

Related Name

ozone.scm.http-port

Default Value

9876

API Name

ozone.scm.http-port

Required

true

Secure Storage Container Manager Web UI Port (TLS/SSL)

Description

The base port that the Storage Container Manager web user interface listens on when using HTTPS. The host name of the Storage Container Manager is combined with this port to form the 'ozone.scm.https-address'.

Related Name

ozone.scm.https-port

Default Value

9877

API Name

ozone.scm.https-port

Required

false

Storage Container Manager Ratis port

Description

The base port that SCM's Ratis Server listens on if multiple SCM's are configured.

Related Name

ozone.scm.ratis.port

Default Value

9894

API Name

ozone.scm.ratis.port

Required

false

Storage Container Manager Security Service port

Description

SCM security server port.

Related Name

ozone.scm.security.service.port

Default Value

9961

API Name

ozone.scm.security.service.port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Role-Specific Kerberos Principal

Description

Kerberos principal used by the Storage Container Manager roles.

Related Name

Default Value

scm

API Name

kerberos_role_princ_name

Required

true

Storage Container Manager TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Storage Container Manager might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.client.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Storage Container Manager TLS/SSL Trust Store Password

Description

The password for the Storage Container Manager TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.client.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Storage Container Manager

Description

Encrypt communication between clients and Storage Container Manager using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ozone.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Storage Container Manager TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Storage Container Manager is acting as a TLS/SSL server.

Related Name

ssl.server.keystore.keypassword

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Storage Container Manager TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Storage Container Manager is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.server.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

Storage Container Manager TLS/SSL Server Keystore File Password

Description

The password for the Storage Container Manager keystore file.

Related Name

ssl.server.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Balancing Interval

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Balancing Interval parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.balancing.iteration.interval

Required

true

Suppress Parameter Validation: Exclude Containers from Balancing

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Containers from Balancing parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.exclude.containers

Required

true

Suppress Parameter Validation: Exclude Datanodes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Datanodes parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.exclude.datanodes

Required

true

Suppress Parameter Validation: Include Datanodes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Include Datanodes parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.include.datanodes

Required

true

Suppress Parameter Validation: Container Move Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Container Move Timeout parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.move.timeout

Required

true

Suppress Parameter Validation: Maximum Size Entering Target

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size Entering Target parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.size.entering.target.max

Required

true

Suppress Parameter Validation: Maximum Size Leaving Source

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size Leaving Source parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.size.leaving.source.max

Required

true

Suppress Parameter Validation: Maximum Size to Move in Balancing

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Maximum Size to Move in Balancing parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.container.balancer.size.moved.max.per.iteration

Required

true

Suppress Parameter Validation: Datanode Container Protocol ACL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Datanode Container Protocol ACL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.security.client.datanode.container.protocol.acl

Required

true

Suppress Parameter Validation: SCM Client Certificate Protocol ACL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SCM Client Certificate Protocol ACL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_hdds.security.client.scm.certificate.protocol.acl

Required

true

Suppress Parameter Validation: Role-Specific Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role-Specific Kerberos Principal parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kerberos_role_princ_name

Required

true

Suppress Parameter Validation: Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Storage Container Manager Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Topology Script File Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Topology Script File Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_net.topology.script.file.name

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/hadoop-policy.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/hadoop-policy.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ozone-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ozone-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/scm-audit-log4j2.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/scm-audit-log4j2.properties_role_safety_valve

Required

true

Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-client.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ssl-client.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Advanced Configuration Snippet (Safety Valve) for ozone-conf/ssl-server.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone-conf/ssl-server.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ozone Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ozone Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.log.dir

Required

true

Suppress Parameter Validation: Storage Container Manager Metadata Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Metadata Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.metadata.dirs

Required

true

Suppress Parameter Validation: Storage Container Manager Block Client port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Block Client port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.block.client.port

Required

true

Suppress Parameter Validation: Storage Container Manager Client port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Client port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.client.port

Required

true

Suppress Parameter Validation: Storage Container Manager Datanode port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Datanode port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.datanode.port

Required

true

Suppress Parameter Validation: Storage Container Manager Data Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Data Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.db.dirs

Required

true

Suppress Parameter Validation: Storage Container Manager GRPC port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager GRPC port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.grpc.port

Required

true

Suppress Parameter Validation: Storage Container Manager Ratis Storage Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Ratis Storage Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.ha.ratis.storage.dir

Required

true

Suppress Parameter Validation: Storage Container Manager HTTP Bind Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager HTTP Bind Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.http-bind-host

Required

true

Suppress Parameter Validation: Storage Container Manager HTTP Web UI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager HTTP Web UI Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.http-port

Required

true

Suppress Parameter Validation: Secure Storage Container Manager HTTPS Bind Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Storage Container Manager HTTPS Bind Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.https-bind-host

Required

true

Suppress Parameter Validation: Secure Storage Container Manager Web UI Port (TLS/SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Secure Storage Container Manager Web UI Port (TLS/SSL) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.https-port

Required

true

Suppress Parameter Validation: Storage Container Manager Ratis port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Ratis port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.ratis.port

Required

true

Suppress Parameter Validation: Storage Container Manager Security Service port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager Security Service port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ozone.scm.security.service.port

Required

true

Suppress Parameter Validation: Role Specific System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System Group parameter.

Related Name

Default Value

false

API Name

role_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: Role Specific System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Specific System User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_process_username

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Java Heap Size of Storage Container Manager

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Heap Size of Storage Container Manager parameter.

Related Name

Default Value

false

API Name

role_config_suppression_scm_max_heap_size

Required

true

Suppress Parameter Validation: Storage Container Manager TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Storage Container Manager TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Storage Container Manager TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: Storage Container Manager TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Storage Container Manager TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Query Server Advanced Configuration Snippet (Safety Valve) for phoenix-site.xml

Description

For advanced use only. A string to be inserted into phoenix-site.xml for this role only.

Related Name

Default Value

API Name

phoenix-site.xml_role_safety_valve

Required

false

Query Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

PHOENIX_QUERY_SERVER_role_env_safety_valve

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Logs

Query Server Log Directory

Description

The log directory for log files of the role Query Server.

Related Name

log_dir

Default Value

/var/log/phoenix

API Name

log_dir

Required

false

Query Server Logging Threshold

Description

The minimum log level for Query Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Query Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Query Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Query Server Max Log Size

Description

The maximum size, in megabytes, per log file for Query Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

phoenix_query_server_fd_thresholds

Required

false

Query Server Host Health Test

Description

When computing the overall Query Server health, consider the host's health.

Related Name

Default Value

true

API Name

phoenix_query_server_host_health_enabled

Required

false

Query Server Process Health Test

Description

Enables the health test that the Query Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

phoenix_query_server_scm_health_enabled

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Enable Remote User Extractor

Description

Boolean which controls if a remote user to impersonate should be extracted from the HTTP request parameter made by that user instead of the HTTP-authenticated user name (which is the default). Required for accessing Phoenix Query Server via Knox.

Related Name

phoenix.queryserver.withRemoteUserExtractor

Default Value

true

API Name

phoenix_query_server_with_remote_user_extractor

Required

false

Additional Phoenix Query Server Options

Description

These arguments are passed as part of the Java command line. Commonly, garbage collection flags or extra debugging flags are passed here.

Related Name

phoenix_queryserver_java_opts

Default Value

API Name

phoenix_queryserver_java_opts

Required

false

Phoenix Query Server Max Heapsize

Description

Maximum size for the Phoenix Query Server Java Process heap. Passed to Java -Xmx.

Related Name

phoenix_queryserver_max_heap_size

Default Value

2 GiB

API Name

phoenix_queryserver_max_heap_size

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Phoenix Query Server Port

Description

The port Phoenix Query Server will listen on

Related Name

phoenix.queryserver.http.port

Default Value

8765

API Name

phoenix_query_server_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Query Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Query Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

phoenix.queryserver.tls.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Query Server TLS/SSL Trust Store Password

Description

The password for the Query Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

phoenix.queryserver.tls.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Query Server

Description

Encrypt communication between clients and Query Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

phoenix.queryserver.tls.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Query Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Query Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

phoenix.queryserver.tls.keystore

Default Value

API Name

ssl_server_keystore_location

Required

false

Query Server TLS/SSL Server Keystore File Password

Description

The password for the Query Server keystore file.

Related Name

phoenix.queryserver.tls.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Description

Whether to suppress configuration warnings produced by the Query Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_phoenix_query_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Additional Phoenix Query Server Options

Description

Whether to suppress configuration warnings produced by the Additional Phoenix Query Server Options configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_phoenix_queryserver_java_opts

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Query Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Query Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Query Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Query Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Query Server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Configuration Validator: Phoenix HBase Dependency Write-Ahead Log (WAL) Codec Class Validator

Description

Whether to suppress configuration warnings produced by the Phoenix HBase Dependency Write-Ahead Log (WAL) Codec Class Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_phoenix_hbase_regionserver_wal_codec_validator

Required

true

Suppress Configuration Validator: Query Server Count Validator

Description

Whether to suppress configuration warnings produced by the Query Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_phoenix_query_server_count_validator

Required

true

Suppress Parameter Validation: Phoenix Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Phoenix Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_phoenix_service_env_safety_valve

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Query Server Health

Description

Whether to suppress the results of the Query Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_phoenix_phoenix_query_server_healthy

Required

true

Ranger Properties in Cloudera Runtime 7.2.15

Role groups:

Ranger Admin

Advanced

Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-admin-site.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-admin-site.xml_role_safety_valve

Required

false

Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_ADMIN_role_env_safety_valve

Required

false

Logs

Ranger Admin Log Directory

Description

The log directory for log files of the role Ranger Admin.

Related Name

ranger.logs.base.dir

Default Value

/var/log/ranger/admin

API Name

log_dir

Required

false

Ranger Admin Logging Threshold

Description

The minimum log level for Ranger Admin logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ranger Admin Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger Admin logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger Admin Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger Admin logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_admin_fd_thresholds

Required

false

Ranger Admin Host Health Test

Description

When computing the overall Ranger Admin health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_admin_host_health_enabled

Required

false

Ranger Admin Process Health Test

Description

Enables the health test that the Ranger Admin's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_admin_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ranger Admin Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

18 second(s)

API Name

graceful_stop_timeout

Required

false

Exclude Users from Audit Access Tab

Description

A single user, or a comma-separated list of multiple users that are excluded from Ranger audits when the Exclude Service Users checkbox is selected on the Ranger Audit Access tab in the Ranger Admin Web UI.

Related Name

ranger.accesslogs.exclude.users.list

Default Value

rangertagsync

API Name

ranger.accesslogs.exclude.users.list

Required

false

Kerberos Cookie Path

Description

Kerberos Cookie path

Related Name

ranger.admin.kerberos.cookie.path

Default Value

/

API Name

ranger.admin.kerberos.cookie.path

Required

false

Kerberos Token Valid Seconds

Description

Kerberos token validity

Related Name

ranger.admin.kerberos.token.valid.seconds

Default Value

30

API Name

ranger.admin.kerberos.token.valid.seconds

Required

false

Maximum Shards for Solr Collection of Ranger Audits

Description

Maximum number of shards for the Ranger Audit Solr collection. The recommended value is, number of replica given multiple by number of shards given for the collection.

Related Name

ranger.audit.solr.max.shards.per.node

Default Value

1

API Name

ranger.audit.solr.max.shards.per.node

Required

true

Replicas for Solr Collection of Ranger Audits

Description

Number of replicas for Ranger Audit Solr collection. The recommended value is, number of Solr servers running in the current cluster divided by number of shards for the collection.

Related Name

ranger.audit.solr.no.replica

Default Value

1

API Name

ranger.audit.solr.no.replica

Required

true

Shards for Solr Collection of Ranger Audits

Description

Number of shards required for Ranger Audit Solr collection. The recommended number of shards is equal or less than the number of Solr Server running in the current cluster.

Related Name

ranger.audit.solr.no.shards

Default Value

1

API Name

ranger.audit.solr.no.shards

Required

true

Enable Knox Trusted Proxy Support

Description

Determine if the Ranger service should allow authentication using Knox trusted proxy.

Related Name

ranger.authentication.allow.trustedproxy

Default Value

true

API Name

ranger.authentication.allow.trustedproxy

Required

false

Default Policy Groups

Description

Single or comma separated list of groups that are required in default policies for Ranger plugin services. The groups will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.default.policy.groups

Default Value

API Name

ranger.default.policy.groups

Required

false

Default Policy Users

Description

Single or comma separated list of users that are required in default policies for Ranger plugin services. The users will be added for any new Ranger Plugin services created in Ranger Admin after setting value to this parameter.

Related Name

ranger.default.policy.users

Default Value

API Name

ranger.default.policy.users

Required

false

Admin AD Auth Base DN

Description

This parameter is only used if Authentication method is AD. The Distinguished Name (DN) of the starting point for directory server searches.

Related Name

ranger.ldap.ad.base.dn

Default Value

API Name

ranger.ldap.ad.base.dn

Required

false

Admin AD Auth Bind DN

Description

Full distinguished name (DN), including common name (CN), of an AD user account that has privileges to search for users. Only used if Authentication method is AD

Related Name

ranger.ldap.ad.bind.dn

Default Value

API Name

ranger.ldap.ad.bind.dn

Required

false

Admin AD Auth Domain Name

Description

AD domain. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.domain

Default Value

API Name

ranger.ldap.ad.domain

Required

false

Admin AD Auth Referral

Description

This parameter is only used if Authentication method is AD. Set to follow if multiple AD servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed.

Related Name

ranger.ldap.ad.referral

Default Value

ignore

API Name

ranger.ldap.ad.referral

Required

false

Admin AD Auth URL

Description

AD URL. Only used if Authentication method is AD

Related Name

ranger.ldap.ad.url

Default Value

API Name

ranger.ldap.ad.url

Required

false

Admin AD Auth User Search Filter

Description

AD user search filter. Only used if Authentication method is AD.

Related Name

ranger.ldap.ad.user.searchfilter

Default Value

API Name

ranger.ldap.ad.user.searchfilter

Required

false

Admin LDAP Auth Base DN

Description

The Distinguished Name (DN) of the starting point for directory server searches. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.base.dn

Default Value

API Name

ranger.ldap.base.dn

Required

false

Admin LDAP Auth Bind User

Description

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

Related Name

ranger.ldap.bind.dn

Default Value

API Name

ranger.ldap.bind.dn

Required

false

Admin LDAP Auth Group Role Attribute

Description

LDAP group role attribute. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.roleattribute

Default Value

API Name

ranger.ldap.group.roleattribute

Required

false

Admin LDAP Auth Group Search Base

Description

LDAP group searchbase. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.searchbase

Default Value

API Name

ranger.ldap.group.searchbase

Required

false

Admin LDAP Auth Group Search Filter

Description

LDAP group search filter. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.group.searchfilter

Default Value

API Name

ranger.ldap.group.searchfilter

Required

false

Admin LDAP Auth Referral

Description

This parameter is only used if Authentication method is LDAP. Set to follow if multiple LDAP servers are configured to return continuation references for results. Set to ignore (default) if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

ranger.ldap.referral

Default Value

ignore

API Name

ranger.ldap.referral

Required

false

Admin LDAP Auth URL

Description

LDAP server URL. Example: value = ldap://localhost:389 or ldaps://localhost:636

Related Name

ranger.ldap.url

Default Value

API Name

ranger.ldap.url

Required

false

Admin LDAP Auth User DN Pattern

Description

LDAP user DN. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.user.dnpattern

Default Value

API Name

ranger.ldap.user.dnpattern

Required

false

Admin LDAP Auth User Search Filter

Description

LDAP user search filter. Only used if Authentication method is LDAP.

Related Name

ranger.ldap.user.searchfilter

Default Value

API Name

ranger.ldap.user.searchfilter

Required

false

SSO Browser Useragent

Description

Comma seperated values of browser agent

Related Name

ranger.sso.browser.useragent

Default Value

Mozilla, chrome

API Name

ranger.sso.browser.useragent

Required

false

Enable Ranger SSO

Description

Determine if Ranger is Knox SSO enabled or not ?

Related Name

ranger.sso.enabled

Default Value

false

API Name

ranger.sso.enabled

Required

false

SSO Provider Url

Description

SSO provider url Example: https://KNOX_HOST:KNOX_PORT/gateway/KNOXSSO_TOPOLOGY_NAME/api/v1/websso

Related Name

ranger.sso.providerurl

Default Value

API Name

ranger.sso.providerurl

Required

false

SSO Public Key

Description

Public key for SSO cookie verification

Related Name

ranger.sso.publicKey

Default Value

API Name

ranger.sso.publicKey

Required

false

Enable Auto Create Tag Service

Description

Whether to create tag service in Ranger Admin.

Related Name

ranger.tagservice.auto.create

Default Value

true

API Name

ranger.tagservice.auto.create

Required

false

Enable Tag Service Auto Link

Description

Whether to link the Tag service set in "Tag Service Name" parameter to all available services in Ranger Admin.

Related Name

ranger.tagservice.auto.link

Default Value

true

API Name

ranger.tagservice.auto.link

Required

false

Tag Service Name

Description

Name of the tag service that will be created in Ranger Admin when "Enable Auto Create Tag Service" parameter is enabled.

Related Name

ranger.tagservice.auto.name

Default Value

cm_tag

API Name

ranger.tagservice.auto.name

Required

false

Admin UNIX Auth Remote Login

Description

Whether remote login is enabled. Only used if Authentication method is UNIX.

Related Name

ranger.unixauth.remote.login.enabled

Default Value

true

API Name

ranger.unixauth.remote.login.enabled

Required

false

Admin UNIX Auth Service Hostname

Description

Host where unix authentication service is running. Only used if Authentication method is UNIX. {{RANGER_USERSYNC_HOST}} is a placeholder value which will be replaced with the host where Ranger Usersync will be installed in the current cluster.

Related Name

ranger.unixauth.service.hostname

Default Value

RANGER_USERSYNC_HOST

API Name

ranger.unixauth.service.hostname

Required

false

Ranger Admin Canary Health Enabled

Description

Ranger Admin Canary is enabled/disabled

Related Name

ranger_admin_canary_health_enabled

Default Value

true

API Name

ranger_admin_canary_health_enabled

Required

false

Ranger Admin Canary Health Timeout

Description

Timeout for Ranger Admin Canary health check

Related Name

ranger_admin_canary_health_timeout

Default Value

30 second(s)

API Name

ranger_admin_canary_health_timeout

Required

false

Ranger Admin Conf Path

Description

Staging directory for Ranger Admin Configuration. This should generally not be changed.

Related Name

ranger_admin_conf_path

Default Value

/etc/ranger/admin

API Name

ranger_admin_conf_path

Required

true

Ranger Admin Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_admin_max_heap_size

Default Value

1 GiB

API Name

ranger_admin_max_heap_size

Required

true

Admin Authentication Method

Description

Authentication Method for login to Ranger Admin.

Related Name

ranger.authentication.method

Default Value

PAM

API Name

ranger_authentication_method

Required

false

Ranger Database Host

Description

Hostname of the database used by Ranger Admin. If the port is non-default for your database type, use host:port notation.

Related Name

ranger_database_host

Default Value

API Name

ranger_database_host

Required

true

Ranger Database Name

Description

Name of Ranger Admin database.

Related Name

ranger_database_name

Default Value

ranger

API Name

ranger_database_name

Required

true

Ranger Database User Password

Description

Password for Ranger Admin database.

Related Name

ranger.jpa.jdbc.password

Default Value

API Name

ranger_database_password

Required

true

Ranger Database Type

Description

Database type to be used.

Related Name

ranger_database_type

Default Value

PostgreSQL

API Name

ranger_database_type

Required

true

Ranger Database User

Description

User for Ranger Admin database.

Related Name

ranger.jpa.jdbc.user

Default Value

rangeradmin

API Name

ranger_database_user

Required

true

Admin AD Auth Bind Password

Description

Password for the account that can search for users. Only used if Authentication method is AD

Related Name

ranger.ldap.ad.bind.password

Default Value

API Name

ranger_ldap_ad_bind_password

Required

false

Admin LDAP Auth Bind User Password

Description

Password for the account that can search for users.

Related Name

ranger.ldap.bind.password

Default Value

API Name

ranger_ldap_bind_password

Required

false

Knox Proxy User Groups

Description

Accepts a list of group names. The Knox user can impersonate only the users that belong to the groups specified in the list. The wildcard value * may be used to allow impersonation of any user belonging to any group.

Related Name

ranger.proxyuser.knox.groups

Default Value

*

API Name

ranger_proxyuser_knox_groups

Required

false

Knox Proxy User Hosts

Description

Accepts a list of IP addresses, IP address ranges in CIDR format and/or host names. The Knox user can impersonate only the requests coming from hosts specified in the list. The wildcard value * may be used to allow impersonation from any host.

Related Name

ranger.proxyuser.knox.hosts

Default Value

*

API Name

ranger_proxyuser_knox_hosts

Required

false

Knox Proxy User Users

Description

Accepts a list of usernames. The Knox user can impersonate only the users specified in the list. The wildcard value * may be used to allow impersonation of any user.

Related Name

ranger.proxyuser.knox.users

Default Value

*

API Name

ranger_proxyuser_knox_users

Required

false

Ranger Tomcat Work Dir

Description

Tomcat work directory for Ranger Admin. This should generally not be changed.

Related Name

ranger_tomcat_work_dir

Default Value

/var/lib/ranger/admin

API Name

ranger_tomcat_work_dir

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Admin Unix Auth Service Port

Description

Port for unix authentication service. Only used if Authentication method is UNIX.

Related Name

ranger.unixauth.service.port

Default Value

5151

API Name

ranger.unixauth.service.port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger Admin TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Admin might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger.truststore.file

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger Admin TLS/SSL Trust Store Password

Description

The password for the Ranger Admin TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Admin

Description

Encrypt communication between clients and Ranger Admin using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Admin TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Admin is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger Admin TLS/SSL Server Keystore File Password

Description

The password for the Ranger Admin keystore file.

Related Name

ranger.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Advanced Configuration Snippet (Safety Valve) for conf/ranger-admin-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-admin-site.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Ranger Admin Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Exclude Users from Audit Access Tab

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Exclude Users from Audit Access Tab parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.accesslogs.exclude.users.list

Required

true

Suppress Parameter Validation: Kerberos Cookie Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Cookie Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.admin.kerberos.cookie.path

Required

true

Suppress Parameter Validation: Default Policy Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Groups parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.default.policy.groups

Required

true

Suppress Parameter Validation: Default Policy Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Default Policy Users parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.default.policy.users

Required

true

Suppress Parameter Validation: Admin AD Auth Base DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Base DN parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.base.dn

Required

true

Suppress Parameter Validation: Admin AD Auth Bind DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind DN parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.bind.dn

Required

true

Suppress Parameter Validation: Admin AD Auth Domain Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Domain Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.domain

Required

true

Suppress Parameter Validation: Admin AD Auth URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.url

Required

true

Suppress Parameter Validation: Admin AD Auth User Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth User Search Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.ad.user.searchfilter

Required

true

Suppress Parameter Validation: Admin LDAP Auth Base DN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Base DN parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.base.dn

Required

true

Suppress Parameter Validation: Admin LDAP Auth Bind User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.bind.dn

Required

true

Suppress Parameter Validation: Admin LDAP Auth Group Role Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Role Attribute parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.group.roleattribute

Required

true

Suppress Parameter Validation: Admin LDAP Auth Group Search Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Base parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.group.searchbase

Required

true

Suppress Parameter Validation: Admin LDAP Auth Group Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Group Search Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.group.searchfilter

Required

true

Suppress Parameter Validation: Admin LDAP Auth URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.url

Required

true

Suppress Parameter Validation: Admin LDAP Auth User DN Pattern

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User DN Pattern parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.user.dnpattern

Required

true

Suppress Parameter Validation: Admin LDAP Auth User Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth User Search Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.ldap.user.searchfilter

Required

true

Suppress Parameter Validation: SSO Browser Useragent

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Browser Useragent parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.sso.browser.useragent

Required

true

Suppress Parameter Validation: SSO Provider Url

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Provider Url parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.sso.providerurl

Required

true

Suppress Parameter Validation: SSO Public Key

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSO Public Key parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.sso.publickey

Required

true

Suppress Parameter Validation: Tag Service Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Tag Service Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.tagservice.auto.name

Required

true

Suppress Parameter Validation: Admin UNIX Auth Service Hostname

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin UNIX Auth Service Hostname parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.unixauth.service.hostname

Required

true

Suppress Parameter Validation: Admin Unix Auth Service Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Unix Auth Service Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.unixauth.service.port

Required

true

Suppress Parameter Validation: Ranger Admin Conf Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Conf Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_admin_conf_path

Required

true

Suppress Parameter Validation: Ranger Admin Max Heapsize

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Max Heapsize parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_admin_max_heap_size

Required

true

Suppress Parameter Validation: Ranger Admin Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_admin_role_env_safety_valve

Required

true

Suppress Parameter Validation: Ranger Database Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Host parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_database_host

Required

true

Suppress Parameter Validation: Ranger Database Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_database_name

Required

true

Suppress Parameter Validation: Ranger Database User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_database_password

Required

true

Suppress Parameter Validation: Ranger Database User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Database User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_database_user

Required

true

Suppress Parameter Validation: Admin AD Auth Bind Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin AD Auth Bind Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ldap_ad_bind_password

Required

true

Suppress Parameter Validation: Admin LDAP Auth Bind User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin LDAP Auth Bind User Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_ldap_bind_password

Required

true

Suppress Parameter Validation: Knox Proxy User Groups

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Groups parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_proxyuser_knox_groups

Required

true

Suppress Parameter Validation: Knox Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Hosts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_proxyuser_knox_hosts

Required

true

Suppress Parameter Validation: Knox Proxy User Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Knox Proxy User Users parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_proxyuser_knox_users

Required

true

Suppress Parameter Validation: Ranger Tomcat Work Dir

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Tomcat Work Dir parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_tomcat_work_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Ranger Admin TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Admin TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Ranger Admin URL Canary Check

Description

Whether to suppress the results of the Ranger Admin URL Canary Check heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_admin_canary

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_admin_unexpected_exits

Required

true

Ranger Tagsync

Advanced

Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties

Description

For advanced use only. A string to be inserted into conf/atlas-application.properties for this role only.

Related Name

Default Value

API Name

conf/atlas-application.properties_role_safety_valve

Required

false

Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into conf/ranger-tagsync-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-tagsync-policymgr-ssl.xml_role_safety_valve

Required

false

Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/ranger-tagsync-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-tagsync-site.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-tagsync-site.xml_role_safety_valve

Required

false

Ranger Tagsync Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger Tagsync Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_TAGSYNC_role_env_safety_valve

Required

false

Logs

Ranger Tagsync Log Directory

Description

The log directory for log files of the role Ranger Tagsync.

Related Name

ranger.tagsync.logdir

Default Value

/var/log/ranger/tagsync

API Name

log_dir

Required

false

Ranger Tagsync Logging Threshold

Description

The minimum log level for Ranger Tagsync logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ranger Tagsync Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger Tagsync logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger Tagsync Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger Tagsync logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_tagsync_fd_thresholds

Required

false

Ranger Tagsync Host Health Test

Description

When computing the overall Ranger Tagsync health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_tagsync_host_health_enabled

Required

false

Ranger Tagsync Process Health Test

Description

Enables the health test that the Ranger Tagsync's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_tagsync_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Default Value

API Name

ranger.tagsync.atlas.default.cluster.name

Required

false

Enable Ranger Tagsync Cookie Authentication

Description

Enable cookie-based authentication for requests going from Ranger Tagsync to Ranger Admin.

Related Name

ranger.tagsync.cookie.enabled

Default Value

true

API Name

ranger.tagsync.cookie.enabled

Required

false

Ranger Tagsync Username

Description

Ranger Tagsync username in Ranger Admin.

Related Name

ranger.tagsync.dest.ranger.username

Default Value

rangertagsync

API Name

ranger.tagsync.dest.ranger.username

Required

false

Enable File Tag Source

Description

Whether to sync tags from file.

Related Name

ranger.tagsync.source.file

Default Value

false

API Name

ranger.tagsync.source.file

Required

false

File Source: File Update Polling Interval

Description

Sync Interval for updating tags from file.

Related Name

ranger.tagsync.source.file.check.interval.millis

Default Value

1 minute(s)

API Name

ranger.tagsync.source.file.check.interval.millis

Required

false

File Source: Filename

Description

Filename containing tags.

Related Name

ranger.tagsync.source.file.filename

Default Value

API Name

ranger.tagsync.source.file.filename

Required

false

Ranger Tagsync Conf Path

Description

Staging directory for Ranger Tagsync Configuration. This should generally not be changed.

Related Name

ranger_tagsync_conf_path

Default Value

/etc/ranger/tagsync

API Name

ranger_tagsync_conf_path

Required

true

Ranger Tagsync Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_tagsync_max_heap_size

Default Value

1 GiB

API Name

ranger_tagsync_max_heap_size

Required

true

Enable Ranger Tagsync Metrics

Description

Controls whether the Ranger Tagsync metrics are enabled.

Related Name

ranger.tagsync.metrics.enabled

Default Value

true

API Name

ranger_tagsync_metrics_enabled

Required

false

Ranger Tagsync Metrics File Name

Description

File name for the metrics exposed by Ranger Tagsync. The file is updated at the frequency configured by Ranger Tagsync Metrics Frequency.

Related Name

ranger.tagsync.metrics.filename

Default Value

metrics.json

API Name

ranger_tagsync_metrics_filename

Required

false

Ranger Tagsync Metrics File Path

Description

The location at which the metrics exposed by Ranger Tagsync will be written.

Related Name

ranger.tagsync.metrics.filepath

Default Value

/var/log/ranger/metrics-tagsync

API Name

ranger_tagsync_metrics_filepath

Required

false

Ranger Tagsync Metrics Frequency

Description

The frequency at which the metrics are logged at Ranger Tagsync Metrics File Path.

Related Name

ranger.tagsync.metrics.frequencytimeinmillis

Default Value

1 minute(s)

API Name

ranger_tagsync_metrics_frequency

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger Tagsync TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Tagsync might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientssl.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger Tagsync TLS/SSL Trust Store Password

Description

The password for the Ranger Tagsync TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

xasecure.policymgr.clientssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Tagsync

Description

Encrypt communication between clients and Ranger Tagsync using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Tagsync TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Tagsync is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

xasecure.policymgr.clientssl.keystore

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger Tagsync TLS/SSL Server Keystore File Password

Description

The password for the Ranger Tagsync keystore file.

Related Name

xasecure.policymgr.clientssl.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Parameter Validation: Atlas Source: Kafka Consumer Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Atlas Source: Kafka Consumer Group parameter.

Related Name

Default Value

false

API Name

role_config_suppression_atlas.kafka.entities.group.id

Required

true

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ranger Tagsync Advanced Configuration Snippet (Safety Valve) for conf/atlas-application.properties

Ranger Usersync

Advanced

Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-ugsync-site.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-ugsync-site.xml_role_safety_valve

Required

false

Ranger Usersync Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_USERSYNC_role_env_safety_valve

Required

false

Logs

Ranger Usersync Log Directory

Description

The log directory for log files of the role Ranger Usersync.

Related Name

ranger.usersync.logdir

Default Value

/var/log/ranger/usersync

API Name

log_dir

Required

false

Ranger Usersync Logging Threshold

Description

The minimum log level for Ranger Usersync logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ranger Usersync Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger Usersync logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger Usersync Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger Usersync logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.

- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_usersync_fd_thresholds

Required

false

Ranger Usersync Host Health Test

Description

When computing the overall Ranger Usersync health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_usersync_host_health_enabled

Required

false

Ranger Usersync Process Health Test

Description

Enables the health test that the Ranger Usersync's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_usersync_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

sub

API Name

ranger.usersync.group.searchscope

Required

false

Usersync Group Usermap Sync

Description

Whether to sync all groups for a user.

Related Name

ranger.usersync.group.usermapsyncenabled

Default Value

true

API Name

ranger.usersync.group.usermapsyncenabled

Required

false

Usersync Bind User

Description

Full distinguished name (DN), including common name (CN), of an LDAP user account that has privileges to search for users. This user is used for searching the users. This could be read-only LDAP user. Example: cn=admin,dc=example,dc=com

Related Name

ranger.usersync.ldap.binddn

Default Value

API Name

ranger.usersync.ldap.binddn

Required

false

Usersync Incremental Sync

Description

Enable Incremental Sync.

Related Name

ranger.usersync.ldap.deltasync

Default Value

true

API Name

ranger.usersync.ldap.deltasync

Required

false

Usersync Group Hierarchy Levels

Description

Levels of LDAP directory tree where the groups need to be searched.

Related Name

ranger.usersync.ldap.grouphierarchylevels

Default Value

0

API Name

ranger.usersync.ldap.grouphierarchylevels

Required

false

Usersync Groupname Case Conversion

Description

Used for converting syncing groups to the selected case conversion.

Related Name

ranger.usersync.ldap.groupname.caseconversion

Default Value

none

API Name

ranger.usersync.ldap.groupname.caseconversion

Required

false

Usersync Referral

Description

Set to follow if multiple LDAP/AD servers are configured to return continuation references for results. Set to ignore if no referrals should be followed. When this parameter is set to throw, all of the normal entries are returned in the enumeration first, before the ReferralException is thrown.

Related Name

ranger.usersync.ldap.referral

Default Value

ignore

API Name

ranger.usersync.ldap.referral

Required

false

Usersync Search Base

Description

Search base for users and groups. Sample value would be dc=hadoop,dc=apache,dc=org.Multiple Ous can be configured with ; (semicolon) separated.

Related Name

ranger.usersync.ldap.searchBase

Default Value

API Name

ranger.usersync.ldap.searchBase

Required

false

Usersync Enable STARTTLS

Description

Enable LDAP STARTTLS.

Related Name

Description

LDAP User Object Class. Example: person or user

Related Name

ranger.usersync.ldap.user.objectclass

Default Value

API Name

ranger.usersync.ldap.user.objectclass

Required

false

Usersync User Search Base

Description

Search base for users. Sample value would be ou=users,dc=hadoop,dc=apache,dc=org. Overrides value specified in ranger.usersync.ldap.searchBase. Multiple Ous can be configured with ; (semicolon) separated eg: cn=users,dc=example,dc=com;ou=example1,ou=example2

Related Name

ranger.usersync.ldap.user.searchbase

Default Value

API Name

ranger.usersync.ldap.user.searchbase

Required

false

Usersync User Search Filter

Description

Optional additional filter constraining the users selected for syncing. A sample value would be (dept=eng). Customize the value to suit your deployment.

Related Name

ranger.usersync.ldap.user.searchfilter

Default Value

API Name

ranger.usersync.ldap.user.searchfilter

Required

false

Usersync User Search Scope

Description

Search scope for the users. Value "base" indicates that only the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "One" indicates that only the immediate children of the entry specified as the search base in ranger.usersync.ldap.user.searchbase should be considered. "Sub" indicates that the entry specified as the search base in ranger.usersync.ldap.user.searchbase, and all of its subordinates to any depth, should be considered.

Related Name

ranger.usersync.ldap.user.searchscope

Default Value

sub

API Name

ranger.usersync.ldap.user.searchscope

Required

false

Usersync Username Case Conversion

Description

Used for converting syncing users to the selected case conversion.

Related Name

ranger.usersync.ldap.username.caseconversion

Default Value

none

API Name

ranger.usersync.ldap.username.caseconversion

Required

false

Enable Results to be Paged for User/Group Request

Description

Whether results can be paged for User/Group requests.

Related Name

ranger.usersync.pagedresultsenabled

Default Value

true

API Name

ranger.usersync.pagedresultsenabled

Required

false

User/Group Request Page size.

Description

Enter Page size for User/Group Request.

Related Name

ranger.usersync.pagedresultssize

Default Value

500

API Name

ranger.usersync.pagedresultssize

Required

false

Maximum Records Per API Call

Description

Maximum number of records to be returned per API call.

Related Name

ranger.usersync.policymanager.maxrecordsperapicall

Default Value

1000

ranger.usersync.policymanager.maxrecordsperapicall

Required

true

Ranger Usersync Policymgr Username

Description

Ranger Usersync username in Ranger Admin.

Related Name

ranger.usersync.policymgr.username

Default Value

rangerusersync

API Name

ranger.usersync.policymgr.username

Required

false

Ranger Usersync Unix Service Port

Description

Port for Unix authentication service.

Related Name

ranger.usersync.port

Default Value

5151

API Name

ranger.usersync.port

Required

true

Ranger Usersync Role Assignment List Delimiter

Description

The parameter is used to specify delimiter while syncing roles to users and groups in Ranger Admin. It is a delimiter for roles. Example - "ROLE_SYS_ADMIN:u:username1,username2&ROLE_KEY_ADMIN:g:groupname1", where ROLE_SYS_ADMIN and ROLE_KEY_ADMIN are roles in Ranger Admin separated by delimiter &. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.role.assignment.list.delimiter

Default Value

&

API Name

ranger.usersync.role.assignment.list.delimiter

Required

false

Usersync Sleeptime interval

Description

Sleep time interval between user sync operations in milliseconds.

Related Name

ranger.usersync.sleeptimeinmillisbetweensynccycle

Default Value

1 minute(s)

API Name

ranger.usersync.sleeptimeinmillisbetweensynccycle

Required

false

Source for Syncing User and Groups

Description

For syncing from Ldap source, use "org.apache.ranger.ldapusersync.process.LdapUserGroupBuilder". For syncing from Unix source, use "org.apache.ranger.unixusersync.process.UnixUserGroupBuilder". For syncing from File source, use "org.apache.ranger.unixusersync.process.FileSourceUserGroupBuilder"

Related Name

ranger.usersync.source.impl.class

Default Value

API Name

ranger.usersync.source.impl.class

Required

true

Ranger Usersync Unix Backend

Description

The backend mechanism to read users and groups from a UNIX system. The value is applicable only on UNIX-based systems.

Related Name

ranger.usersync.unix.backend

Default Value

nss

API Name

ranger.usersync.unix.backend

Required

false

Usersync UNIX Minimum User ID

Description

Minimum User ID to start syncing. This should be set to avoid syncing of UNIX system-level users in the Ranger Admin.

Related Name

ranger.usersync.unix.minUserId

Default Value

500

API Name

ranger.usersync.unix.minUserId

Required

false

Usersync Enable User Search

Description

Enable User Search, when ranger.usersync.group.search.first.enabled is set to true.

Related Name

ranger.usersync.user.searchenabled

Default Value

false

API Name

ranger.usersync.user.searchenabled

Required

false

Ranger Usersync Username Groupname Assignment List Delimiter

Description

The parameter is used to specify a delimiter while syncing users and groups in Ranger Admin. Used as a delimiter to differentiate between two or more users and groups. Example - "ROLE_SYS_ADMIN:u:username1,username2", where username1 and username2 are separated by ,. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and

ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.username.groupname.assignment.list.delimiter

Default Value

,

API Name

ranger.usersync.username.groupname.assignment.list.delimiter

Required

false

Ranger Usersync User Groups Assignment List Delimiter

Description

The parameter is used to specify delimiter while syncing users and groups along with specified roles in Ranger Admin. It is a delimiter to differentiate between users and groups from respective roles. Example - "ROLE_SYS_ADMIN:u:username1,username2&ROLE_SYS_ADMIN:g:groupname1,groupname2", where ROLE_SYS_ADMIN is a role. "u" is used to denote the list of users followed by actual usernames which are username1 and username2. While "g" is used to denote the list of groups followed by actual groupnames which are groupname1 and groupname2. Note - All the delimiters parameters ranger.usersync.role.assignment.list.delimiter, ranger.usersync.users.groups.assignment.list.delimiter and ranger.usersync.username.groupname.assignment.list.delimiter should have different values. The delimiters should not contain characters that are allowed in username or groupname.

Related Name

ranger.usersync.users.groups.assignment.list.delimiter

:

API Name

ranger.usersync.users.groups.assignment.list.delimiter

Required

false

Ranger Usersync Conf Path

Description

Staging directory for Ranger Usersync Configuration. This should generally not be changed.

Related Name

ranger_usersync_conf_path

Default Value

/etc/ranger/usersync

API Name

ranger_usersync_conf_path

Required

true

Usersync Bind User Password

Description

Password for the LDAP bind user used for searching users.

Related Name

ranger.usersync.ldap.ldapbindpassword

Default Value

API Name

ranger_usersync_ldap_ldapbindpassword

Required

false

Ranger Usersync Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_usersync_max_heap_size

Default Value

1 GiB

API Name

ranger_usersync_max_heap_size

Required

true

Enable Ranger Usersync Metrics

Description

Controls whether the Ranger Usersync metrics are enabled.

Related Name

ranger.usersync.metrics.enabled

Default Value

true

API Name

ranger_usersync_metrics_enabled

Required

false

Ranger Usersync Metrics File Name

Description

File name for the metrics exposed by Ranger Usersync. The file is updated at the frequency configured by Ranger Usersync Metrics Frequency.

Related Name

ranger.usersync.metrics.filename

Default Value

metrics.json

API Name

ranger_usersync_metrics_filename

Required

false

Ranger Usersync Metrics File Path

Description

The location at which the metrics exposed by Ranger Usersync will be written.

Related Name

ranger.usersync.metrics.filepath

Default Value

/var/log/ranger/metrics-usersync

API Name

ranger_usersync_metrics_filepath

Required

false

Ranger Usersync Metrics Frequency

Description

The frequency at which the metrics are logged at Ranger Usersync Metrics File Path.

Related Name

ranger.usersync.metrics.frequencytimeinmillis

Default Value

1 minute(s)

API Name

ranger_usersync_metrics_frequency

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger Usersync TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Usersync might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger.usersync.truststore.file

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger Usersync TLS/SSL Trust Store Password

Description

The password for the Ranger Usersync TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger.usersync.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Advanced Configuration Snippet (Safety Valve) for conf/ranger-ugsync-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_conf/ranger-ugsync-site.xml_role_safety_valve

Suppress Parameter Validation: Ranger Usersync Group Based Role Assignment Rules

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Group Based Role Assignment Rules parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.based.role.assignment.rules

Required

true

Suppress Parameter Validation: Usersync Group Member Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Member Attribute parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.memberattributename

Required

true

Suppress Parameter Validation: Usersync Group Name Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Name Attribute parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.nameattribute

Required

true

Suppress Parameter Validation: Usersync Group Object Class

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Object Class parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.objectclass

Required

true

Suppress Parameter Validation: Usersync Group Search Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Search Base parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.searchbase

Required

true

Suppress Parameter Validation: Usersync Group Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Group Search Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.group.searchfilter

Required

true

Suppress Parameter Validation: Usersync Bind User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.binddn

Required

true

Suppress Parameter Validation: Usersync Search Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Search Base parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.searchbase

Required

true

Suppress Parameter Validation: Usersync LDAP/AD URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync LDAP/AD URL parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.url

Required

true

Suppress Parameter Validation: Usersync User Group Name Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Group Name Attribute parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.groupnameattribute

Required

true

Suppress Parameter Validation: Usersync User Name Attribute

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Name Attribute parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.nameattribute

Required

true

Suppress Parameter Validation: Usersync User Object Class

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Object Class parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.objectclass

Required

true

Suppress Parameter Validation: Usersync User Search Base

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Base parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchbase

Required

true

Suppress Parameter Validation: Usersync User Search Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync User Search Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.ldap.user.searchfilter

Required

true

Suppress Parameter Validation: Ranger Usersync Policymgr Username

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Policymgr Username parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.policymgr.username

Required

true

Suppress Parameter Validation: Ranger Usersync Unix Service Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Unix Service Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.port

Required

true

Suppress Parameter Validation: Ranger Usersync Role Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Role Assignment List Delimiter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.role.assignment.list.delimiter

Required

true

Suppress Parameter Validation: Ranger Usersync Username Groupname Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Username Groupname Assignment List Delimiter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.username.groupname.assignment.list.delimiter

Required

true

Suppress Parameter Validation: Ranger Usersync User Groups Assignment List Delimiter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync User Groups Assignment List Delimiter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger.usersync.users.groups.assignment.list.delimiter

Required

true

Suppress Parameter Validation: Ranger Usersync Conf Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Conf Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_conf_path

Required

true

Suppress Parameter Validation: Usersync Bind User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Usersync Bind User Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_ldap_ldapbindpassword

Required

true

Suppress Parameter Validation: Ranger Usersync Max Heapsize

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Max Heapsize parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_max_heap_size

Required

true

Suppress Parameter Validation: Ranger Usersync Metrics File Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Name parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_metrics_filename

Required

true

Suppress Parameter Validation: Ranger Usersync Metrics File Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Metrics File Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_usersync_metrics_filepath

Required

true

Suppress Parameter Validation: Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Ranger Usersync TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Usersync TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_usersync_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_usersync_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_ranger_ranger_usersync_host_health

Ranger Usersync Role Health Test

Description

When computing the overall RANGER health, consider Ranger Usersync's health

Related Name

Default Value

true

API Name

RANGER_RANGER_USERSYNC_health_enabled

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "I F (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", " streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Ranger KMS Properties in Cloudera Runtime 7.2.15

Role groups:

Ranger KMS Server

Advanced

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml

Description

For advanced use only. A string to be inserted into conf/core-site.xml for this role only.

Related Name

Default Value

API Name

conf/core-site.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml

Description

For advanced use only. A string to be inserted into conf/dbks-site.xml for this role only.

Related Name

Default Value

API Name

conf/dbks-site.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml

Description

For advanced use only. A string to be inserted into conf/hdfs-site.xml for this role only.

Related Name

Default Value

API Name

conf/hdfs-site.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml

Description

For advanced use only. A string to be inserted into conf/kms-site.xml for this role only.

Related Name

Default Value

API Name

conf/kms-site.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-audit.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-audit.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-policymgr-ssl.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-security.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-security.xml_role_safety_valve

Required

false

Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-site.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-site.xml_role_safety_valve

Required

false

Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger KMS Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_KMS_SERVER_role_env_safety_valve

Required

false

Logs

Ranger KMS Server Log Directory

Description

The log directory for log files of the role Ranger KMS Server.

Related Name

log_dir

Default Value

/var/log/ranger/kms

API Name

log_dir

Required

false

Ranger KMS Server Logging Threshold

Description

The minimum log level for Ranger KMS Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ranger KMS Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger KMS Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger KMS Server Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger KMS Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_kms_server_fd_thresholds

Required

false

Ranger KMS Server Host Health Test

Description

When computing the overall Ranger KMS Server health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_kms_server_host_health_enabled

Required

false

Ranger KMS Server Process Health Test

Description

Enables the health test that the Ranger KMS Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_kms_server_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ranger KMS Server Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

18 second(s)

API Name

graceful_stop_timeout

Required

false

Hadoop KMS Audit Aggregation Window In Milliseconds

Description

Duplicate audit log events within the aggregation window (specified in ms) are quashed to reduce log traffic. A single message for aggregated events is printed at the end of the window, along with a count of the number of aggregated events.

Related Name

hadoop.kms.audit.aggregation.window.ms

Default Value

10 second(s)

API Name

hadoop_kms_audit_aggregation_window_ms

Required

false

Hadoop KMS Authentication Signer Secret Provider

Description

Indicates how the secret to sign the authentication cookies will be stored. Options are 'random' (default), 'string' and 'zookeeper'. If using a setup with multiple KMS instances, 'zookeeper' should be used.

Related Name

hadoop.kms.authentication.signer.secret.provider

Default Value

random

API Name

hadoop_kms_authentication_signer_secret_provider

Required

false

Hadoop KMS Authentication Signer Secret Provider Zookeeper Auth Type

Description

The Zookeeper authentication type, 'none' or kerberos.

Related Name

hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type

Default Value

none

API Name

hadoop_kms_authentication_signer_secret_provider_zookeeper_auth_type

Required

false

Hadoop KMS Authentication Signer Secret Provider Zookeeper Path

Description

The Zookeeper ZNode path where the KMS instances will store and retrieve the secret from.

Related Name

hadoop.kms.authentication.signer.secret.provider.zookeeper.path

Default Value

/hadoop-kms/hadoop-auth-signature-secret

API Name

hadoop_kms_authentication_signer_secret_provider_zookeeper_path

Required

false

Hadoop KMS Blacklist Decrypt EEK

Description

Add user which is needed to be blacklist for decrypt EncryptedKey CryptoExtension operations. Multiple list os user's can be added with comma separated.

Related Name

hadoop.kms.blacklist.DECRYPT_EEK

Default Value

hdfs

API Name

hadoop_kms_blacklist_decrypt_eek

Required

false

Hadoop KMS Cache Enable

Description

Whether the KMS will act as a cache for the backing KeyProvider. When the cache is enabled, operations like getKeyVersion, getMetadata, and getCurrentKey will sometimes return cached data without consulting the backing KeyProvider. Cached values are flushed when keys are deleted or modified.

Related Name

hadoop.kms.cache.enable

Default Value

true

API Name

hadoop_kms_cache_enable

Required

false

Hadoop Kms Cache Timeout In Milliseconds

Description

Expiry time for the KMS key version and key metadata cache, in milliseconds. This affects getKeyVersion and getMetadata.

Related Name

hadoop.kms.cache.timeout.ms

Default Value

10 minute(s)

API Name

hadoop_kms_cache_timeout_ms

Required

false

Hadoop KMS Current Key Cache Timeout In Milliseconds

Description

Expiry time for the KMS current key cache, in milliseconds. This affects getCurrentKey operations.

Related Name

hadoop.kms.current.key.cache.timeout.ms

Default Value

30 second(s)

API Name

hadoop_kms_current_key_cache_timeout_ms

Required

false

HDFS Proxy User Groups

Description

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hdfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_groups

Required

false

HDFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hdfs.hosts

Default Value

API Name

hadoop_kms_proxyuser_hdfs_hosts

Required

false

Hive Proxy User Groups

Description

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hive.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hive_groups

Required

false

Hive Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hive.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hive_hosts

Required

false

HTTP Proxy User Groups

Description

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.HTTP.groups

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_groups

Required

false

HTTP Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.HTTP.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_hosts

Required

false

HttpFS Proxy User Groups

Description

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.httpfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_groups

Required

false

HttpFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.httpfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_hosts

Required

false

Hue Proxy User Groups

Description

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hue.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hue_groups

Required

false

Hue Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hue.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hue_hosts

Required

false

Livy Proxy User Groups

Description

Allows the livy superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.livy.groups

Default Value

*

API Name

hadoop_kms_proxyuser_livy_groups

Required

false

Livy Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the livy user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.livy.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_livy_hosts

Required

false

Mapred Proxy User Groups

Description

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.mapred.groups

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_groups

Required

false

Mapred Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.mapred.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_hosts

Required

false

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.oozie.groups

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_groups

Required

false

Oozie Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.oozie.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_hosts

Required

false

Ranger Proxy User Groups

Description

Allows the ranger superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.ranger.groups

Default Value

*

API Name

hadoop_kms_proxyuser_ranger_groups

Required

false

Ranger Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the ranger user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.ranger.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_ranger_hosts

Required

false

YARN Proxy User Groups

Description

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.yarn.groups

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_groups

Required

false

YARN Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.yarn.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_hosts

Required

false

Zeppelin Proxy User Groups

Description

Allows the zeppelin superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.zeppelin.groups

Default Value

*

API Name

hadoop_kms_proxyuser_zeppelin_groups

Required

false

Zeppelin Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the zeppelin user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.zeppelin.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_zeppelin_hosts

Required

false

Hadoop Security Keystore JavaKeyStoreProvider Password

Description

If using the JavaKeyStoreProvider, the password for the keystore file.

Related Name

hadoop.security.keystore.JavaKeyStoreProvider.password

Default Value

API Name

hadoop_security_keystore_javakeystoreprovider_password

Required

false

Azure Client ID

Description

Azure client id is a unique identifier generated by Azure AD that is tied to an application and service principal during its initial provisioning.

Related Name

ranger.kms.azure.client.id

Default Value

API Name

ranger_kms_azure_client_id

Required

false

Azure Client Secret

Description

Azure client secret to authenticate to key vault.

Related Name

ranger.kms.azure.client.secret

Default Value

API Name

ranger_kms_azure_client_secret

Required

false

Azure key vault cerificate password

Description

Azure key vault cerificate password.

Related Name

ranger.kms.azure.keyvault.certificate.password

Default Value

API Name

ranger_kms_azure_keyvault_certificate_password

Required

false

Azure Key Vault Cerificate Path

Description

Azure key vault cerificate path.

Related Name

ranger.kms.azure.keyvault.certificate.path

Default Value

API Name

ranger_kms_azure_keyvault_certificate_path

Required

false

Enable Azure Key Vault SSL

Description

Azure authentication via certificate or password.

Related Name

ranger.kms.azure.keyvault.ssl.enabled

Default Value

false

API Name

ranger_kms_azure_keyvault_ssl_enabled

Required

false

Azure Master Key Name

Description

Azure master key name.

Related Name

ranger.kms.azure.masterkey.name

Default Value

API Name

ranger_kms_azure_masterkey_name

Required

false

Azure Master Key Type

Description

Select the type for the Master key. Key Vault supports RSA and Elliptic Curve keys.

Related Name

ranger.kms.azure.masterkey.type

Default Value

RSA

API Name

ranger_kms_azure_masterkey_type

Required

false

Azure Zonekey Encryption Algorithm

Description

A supported algorithm for a encryption zone key operation.

Related Name

ranger.kms.azure.zonekey.encryption.algorithm

Default Value

RSA1_5

API Name

ranger_kms_azure_zonekey_encryption_algorithm

Required

false

Enable Azure Key Vault

Description

Whether to enable Azure key vault for secure key management.

Related Name

ranger.kms.azurekeyvault.enabled

Default Value

false

API Name

ranger_kms_azurekeyvault_enabled

Required

false

Azure Key Vault Url

Description

Azure Key Vault url of format "https://{keyvault-name}.vault.azure.net/", where keyvault-name is the name for a key vault in the Microsoft Azure Key Vault service.

Related Name

ranger.kms.azurekeyvault.url

Default Value

API Name

ranger_kms_azurekeyvault_url

Required

false

Enable Hardware Security Module (HSM) For Ranger KMS (Luna)

Description

Whether to enable HSM for protection of cryptographic keys.

Related Name

ranger.ks.hsm.enabled

Default Value

false

API Name

ranger_kms_hsm_enabled

Required

false

HSM Partition Name

Description

Independent logical HSM partition that resides within Luna SA appliance's physical K6 HSM appliances. It manage access controls, security policies and administration access. In case of high availabilty enter the group name.

Related Name

ranger.ks.hsm.partition.name

Default Value

API Name

ranger_kms_hsm_partition_name

Required

false

HSM partition password

Description

Password for securing HSM partition.

Related Name

ranger.ks.hsm.partition.password

Default Value

API Name

ranger_kms_hsm_partition_password

Required

false

HSM Type

Description

Select HSM type.

Related Name

ranger.ks.hsm.type

Default Value

LunaProvider

API Name

ranger_kms_hsm_type

Required

false

Enable SafeNet Keysecure For Ranger KMS

Description

Whether to enable Keysecure for secure and centralized key management.

Related Name

ranger.kms.keysecure.enabled

Default Value

false

API Name

ranger_kms_keysecure_enabled

Required

false

SafeNet Keysecure Hostname

Description

Hostname of SafeNet Keysecure.

Related Name

ranger.kms.keysecure.hostname

Default Value

API Name

ranger_kms_keysecure_hostname

Required

false

SafeNet Keysecure Login Password

Description

Login Password for accessing SafeNet Keysecure.

Related Name

ranger.kms.keysecure.login.password

Default Value

API Name

ranger_kms_keysecure_login_password

Required

false

SafeNet Keysecure Login Username

Description

Login Username for accessing SafeNet Keysecure.

Related Name

ranger.kms.keysecure.login.username

Default Value

API Name

ranger_kms_keysecure_login_username

Required

false

SafeNet Keysecure MasterKey Name

Description

Enter Keysecure masterkey Name. It is used for encrypting/decrypting zone keys.

Related Name

ranger.kms.keysecure.masterkey.name

Default Value

API Name

ranger_kms_keysecure_masterkey_name

Required

false

SafeNet Keysecure Masterkey Size

Description

SafeNet Keysecure Masterkey Size.

Related Name

ranger.kms.keysecure.masterkey.size

Default Value

256

API Name

ranger_kms_keysecure_masterkey_size

Required

false

SafeNet Keysecure Sunpkcs11 cfg Filepath

Description

SafeNet Keysecure sunpkcs11 cfg filepath.

Related Name

ranger.kms.keysecure.sunpkcs11.cfg.filepath

Default Value

API Name

ranger_kms_keysecure_sunpkcs11_cfg_filepath

Required

false

Enable SafeNet Keysecure User Password Authentication

Description

Whether to enable SafeNet Keysecure user password authentication.

Related Name

ranger.kms.keysecure.UserPassword.Authentication

Default Value

false

API Name

ranger_kms_keysecure_userpassword_authentication

Required

false

Ranger KMS Master Key Password

Description

Password for Ranger KMS Master Key.

Related Name

ranger.db.encrypt.key.password

Default Value

API Name

ranger_kms_master_key_password

Required

true

Ranger KMS Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_kms_max_heap_size

Default Value

1 GiB

API Name

ranger_kms_max_heap_size

Required

true

Ranger KMS Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kms/audit/hdfs/spool

API Name

ranger_kms_plugin_hdfs_audit_spool_directory

Required

true

Ranger KMS Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kms.policy.cache.dir

Default Value

/var/lib/ranger/kms/policy-cache

API Name

ranger_kms_plugin_policy_cache_directory

Required

true

Ranger KMS Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kms/audit/solr/spool

API Name

ranger_kms_plugin_solr_audit_spool_directory

Required

true

Ranger Kms Server Canary Health Enabled

Description

Ranger Kms Server Canary is enabled/disabled

Related Name

ranger_kms_server_canary_health_enabled

Default Value

true

API Name

ranger_kms_server_canary_health_enabled

Required

false

Ranger Kms Server Canary Health Timeout

Description

Timeout for Ranger Kms Server Canary health check.

Related Name

ranger_kms_server_canary_health_timeout

Default Value

30 second(s)

API Name

ranger_kms_server_canary_health_timeout

Required

false

Ranger KMS Tomcat Work Dir

Description

Tomcat work directory for Ranger KMS. This should generally not be changed.

Related Name

ranger_kms_tomcat_work_dir

Default Value

/var/lib/ranger/kms

API Name

ranger_kms_tomcat_work_dir

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kms.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kms.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Ranger KMS HTTP Port

Description

HTTP Port for Ranger KMS.

Related Name

ranger.service.http.port

Default Value

9292

API Name

ranger_kms_http_port

Required

false

Ranger KMS HTTPS Port

Description

HTTPS Port for Ranger KMS. Only used when SSL is enabled for Ranger KMS.

Related Name

ranger.service.https.port

Default Value

9494

API Name

ranger_kms_https_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger KMS Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger KMS Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientssl.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger KMS Server TLS/SSL Trust Store Password

Description

The password for the Ranger KMS Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

xasecure.policymgr.clientssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger KMS Server

Description

Encrypt communication between clients and Ranger KMS Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger KMS Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger KMS Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.service.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger KMS Server TLS/SSL Server Keystore File Password

Description

The password for the Ranger KMS Server keystore file.

Related Name

ranger.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Healthy Ranger KMS Server Monitoring Thresholds

Description

The health test thresholds of the overall Ranger KMS Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger KMS Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger KMS Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_KMS_RANGER_KMS_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Ranger KMS Plugin Hdfs Audit Directory

Description

The DFS path on which Ranger audits are written.

Related Name

ranger_kms_plugin_hdfs_audit_directory

Default Value

$ranger_base_audit_url/kms

API Name

ranger_kms_plugin_hdfs_audit_directory

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Ranger KMS service instance depends on

Related Name

Default Value

API Name

zookeeper_service

Required

false

Security

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name

Default Value

rangerkms

API Name

kerberos_princ_name

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_conf/core-site.xml_role_safety_valve

role_config_suppression_hadoop_kms_proxyuser_hue_hosts

Required

true

Suppress Configuration Validator: Livy Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Livy Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_livy_groups

Required

true

Suppress Configuration Validator: Livy Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Livy Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_livy_hosts

Required

true

Suppress Configuration Validator: Mapred Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Mapred Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_mapred_groups

Required

true

Suppress Configuration Validator: Mapred Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Mapred Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_mapred_hosts

Required

true

Suppress Configuration Validator: Oozie Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Oozie Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_oozie_groups

Required

true

Suppress Configuration Validator: Oozie Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Oozie Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_oozie_hosts

Required

true

Suppress Configuration Validator: Ranger Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Ranger Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_ranger_groups

Required

true

Suppress Configuration Validator: Ranger Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Ranger Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_ranger_hosts

Required

true

Suppress Configuration Validator: YARN Proxy User Groups

Description

Whether to suppress configuration warnings produced by the YARN Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_yarn_groups

Required

true

Suppress Configuration Validator: YARN Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the YARN Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_yarn_hosts

Required

true

Suppress Configuration Validator: Zeppelin Proxy User Groups

Description

Whether to suppress configuration warnings produced by the Zeppelin Proxy User Groups configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_zeppelin_groups

Required

true

Suppress Configuration Validator: Zeppelin Proxy User Hosts

Description

Whether to suppress configuration warnings produced by the Zeppelin Proxy User Hosts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_kms_proxyuser_zeppelin_hosts

Required

true

Suppress Configuration Validator: Hadoop Security Keystore JavaKeyStoreProvider Password

Description

Whether to suppress configuration warnings produced by the Hadoop Security Keystore JavaKeyStoreProvider Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_hadoop_security_keystore_javakeystoreprovider_password

Required

true

Suppress Configuration Validator: Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Ranger KMS Server Log Directory

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Azure Client ID

Description

Whether to suppress configuration warnings produced by the Azure Client ID configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_azure_client_id

Required

true

Suppress Configuration Validator: Azure Client Secret

Description

Whether to suppress configuration warnings produced by the Azure Client Secret configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_azure_client_secret

Required

true

Suppress Configuration Validator: Azure key vault cerificate password

Description

Whether to suppress configuration warnings produced by the Azure key vault cerificate password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_azure_keyvault_certificate_password

Required

true

Suppress Configuration Validator: Azure Key Vault Cerificate Path

Description

Whether to suppress configuration warnings produced by the Azure Key Vault Cerificate Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_azure_keyvault_certificate_path

Required

true

Suppress Configuration Validator: Azure Master Key Name

Description

Whether to suppress configuration warnings produced by the Azure Master Key Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_azure_masterkey_name

Required

true

Suppress Configuration Validator: Azure Key Vault Url

Description

Whether to suppress configuration warnings produced by the Azure Key Vault Url configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_azurekeyvault_url

Required

true

Suppress Configuration Validator: HSM Partition Name

Description

Whether to suppress configuration warnings produced by the HSM Partition Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_hsm_partition_name

Required

true

Suppress Configuration Validator: HSM partition password

Description

Whether to suppress configuration warnings produced by the HSM partition password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_hsm_partition_password

Required

true

Suppress Configuration Validator: Ranger KMS HTTP Port

Description

Whether to suppress configuration warnings produced by the Ranger KMS HTTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_http_port

Required

true

Suppress Configuration Validator: Ranger KMS HTTPS Port

Description

Whether to suppress configuration warnings produced by the Ranger KMS HTTPS Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_https_port

Required

true

Suppress Configuration Validator: SafeNet Keysecure Hostname

Description

Whether to suppress configuration warnings produced by the SafeNet Keysecure Hostname configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_keysecure_hostname

Required

true

Suppress Configuration Validator: SafeNet Keysecure Login Password

Description

Whether to suppress configuration warnings produced by the SafeNet Keysecure Login Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_keysecure_login_password

Required

true

Suppress Configuration Validator: SafeNet Keysecure Login Username

Description

Whether to suppress configuration warnings produced by the SafeNet Keysecure Login Username configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_keysecure_login_username

Required

true

Suppress Configuration Validator: SafeNet Keysecure MasterKey Name

Description

Whether to suppress configuration warnings produced by the SafeNet Keysecure MasterKey Name configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_keysecure_masterkey_name

Required

true

Suppress Configuration Validator: SafeNet Keysecure Sunpkcs11 cfg Filepath

Description

Whether to suppress configuration warnings produced by the SafeNet Keysecure Sunpkcs11 cfg Filepath configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_keysecure_sunpkcs11_cfg_filepath

Required

true

Suppress Configuration Validator: Ranger KMS Tomcat Work Dir

Description

Whether to suppress configuration warnings produced by the Ranger KMS Tomcat Work Dir configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_kms_tomcat_work_dir

Required

true

Suppress Configuration Validator: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the Ranger Plugin Trusted Proxy IP Address configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Ranger KMS Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Trust Store File configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Configuration Validator: Ranger KMS Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Trust Store Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Configuration Validator: Ranger KMS Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Ranger KMS Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger KMS Database Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database Host parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_database_host

Required

true

Suppress Parameter Validation: Ranger KMS Database Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database Name parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_database_name

Required

true

Suppress Parameter Validation: Ranger KMS Database User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database User Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_database_password

Required

true

Suppress Parameter Validation: Ranger KMS Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_database_port

Required

true

Suppress Parameter Validation: Ranger KMS Database User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Database User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_database_user

Required

true

Suppress Parameter Validation: Ranger KMS Load Balancer

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Load Balancer parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_load_balancer

Required

true

Suppress Parameter Validation: Ranger KMS Plugin Hdfs Audit Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Plugin Hdfs Audit Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_plugin_hdfs_audit_directory

Required

true

Suppress Configuration Validator: Ranger KMS Server Count Validator

Description

Whether to suppress configuration warnings produced by the Ranger KMS Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_server_count_validator

Required

true

Suppress Parameter Validation: Ranger KMS Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger KMS Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_kms_service_env_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Ranger KMS Server Health

Description

Whether to suppress the results of the Ranger KMS Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_ranger_kms_ranger_kms_server_healthy

Required

true

Ranger KMS with Key Trustee Server Properties in Cloudera Runtime 7.2.15

Role groups:

Ranger KMS Server with KTS

Advanced

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/core-site.xml

Description

For advanced use only. A string to be inserted into conf/core-site.xml for this role only.

Related Name

Default Value

API Name

conf/core-site.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/dbks-site.xml

Description

For advanced use only. A string to be inserted into conf/dbks-site.xml for this role only.

Related Name

Default Value

API Name

conf/dbks-site.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/hdfs-site.xml

Description

For advanced use only. A string to be inserted into conf/hdfs-site.xml for this role only.

Related Name

Default Value

API Name

conf/hdfs-site.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kms-site.xml

Description

For advanced use only. A string to be inserted into conf/kms-site.xml for this role only.

Related Name

Default Value

API Name

conf/kms-site.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/kts-site.xml

Description

For advanced use only. A string to be inserted into conf/kts-site.xml for this role only.

Related Name

Default Value

API Name

conf/kts-site.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-audit.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-audit.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-audit.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-policymgr-ssl.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-security.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-security.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-security.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Advanced Configuration Snippet (Safety Valve) for conf/ranger-kms-site.xml

Description

For advanced use only. A string to be inserted into conf/ranger-kms-site.xml for this role only.

Related Name

Default Value

API Name

conf/ranger-kms-site.xml_role_safety_valve

Required

false

Ranger KMS Server with KTS Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among

multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger KMS Server with KTS Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

RANGER_KMS_SERVER_KTS_role_env_safety_valve

Required

false

Logs

Ranger KMS Server with KTS Log Directory

Description

The log directory for log files of the role Ranger KMS Server with KTS.

Related Name

log_dir

Default Value

/var/log/ranger/kms

API Name

log_dir

Required

false

Ranger KMS Server with KTS Logging Threshold

Description

The minimum log level for Ranger KMS Server with KTS logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Ranger KMS Server with KTS Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger KMS Server with KTS logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger KMS Server with KTS Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger KMS Server with KTS logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_kms_server_kts_fd_thresholds

Required

false

Ranger KMS Server with KTS Host Health Test

Description

When computing the overall Ranger KMS Server with KTS health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_kms_server_kts_host_health_enabled

Required

false

Ranger KMS Server with KTS Process Health Test

Description

Enables the health test that the Ranger KMS Server with KTS's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_kms_server_kts_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more

details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Key Trustee Server Auth Code

Description

Key Trustee Server auth code used for KMS to authenticate against the server

Related Name

cloudera.trustee.keyprovider.auth

Default Value

API Name

cloudera_trustee_keyprovider_auth

Required

true

Active Key Trustee Server

Description

Active Key Trustee Server hostname that backs the KMS.

Related Name

cloudera.trustee.keyprovider.hostname-ACTIVE

Default Value

API Name

cloudera_trustee_keyprovider_hostname-ACTIVE

Required

true

Passive Key Trustee Server

Description

Passive Key Trustee Server hostname that backs the KMS. Only needed for Key Trustee Server high availability.

Related Name

cloudera.trustee.keyprovider.hostname-PASSIVE

Default Value

API Name

cloudera_trustee_keyprovider_hostname-PASSIVE

Required

false

Key Trustee Server Org Name

Description

Key Trustee Server Organization that keys are stored against.

Related Name

cloudera.trustee.keyprovider.org

Default Value

API Name

cloudera_trustee_keyprovider_org

Required

true

Key Trustee Server Key Provider Pool Timeout

Description

Key Trustee key provider pool timeout.

Related Name

cloudera.trustee.keyprovider.pool.abandoned.timeout

Default Value

5 minute(s)

API Name

cloudera_trustee_keyprovider_pool_abandoned_timeout

Required

true

Key Trustee Server Key Provider Max Connections

Description

Key Trustee Server Key Provider Max Connections.

Related Name

cloudera.trustee.keyprovider.pool.max

Default Value

5

API Name

cloudera_trustee_keyprovider_pool_max

Required

true

Key Trustee Server Key Provider Pool Max Idle

Description

Key Trustee Server Key Provider Pool Max Idle.

Related Name

cloudera.trustee.keyprovider.pool.max.idle

Default Value

2

API Name

cloudera_trustee_keyprovider_pool_max_idle

Required

true

Key Trustee Server Key Provider Pool Min Idle

Description

Key Trustee Server Key Provider Pool Min Idle.

Related Name

cloudera.trustee.keyprovider.pool.min.idle

Default Value

1

API Name

cloudera_trustee_keyprovider_pool_min_idle

Required

true

Key Trustee Server Round Robin Reads

Description

Distribute read requests amongst the available Key Trustee Servers. Only effective when a passive server is specified.

Related Name

cloudera.trustee.keyprovider.roundrobin

Default Value

true

API Name

cloudera_trustee_keyprovider_roundrobin

Required

false

Ranger KMS Server with KTS Diagnostics Collection Timeout

Description

The timeout in milliseconds to wait for diagnostics collection to complete.

Related Name

Default Value

5 minute(s)

API Name

csd_role_diagnostics_timeout

Required

false

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

18 second(s)

API Name

graceful_stop_timeout

Required

false

Hadoop KMS Audit Aggregation Window

Description

Duplicate audit log events within the aggregation window (specified in ms) are quashed to reduce log traffic. A single message for aggregated events is printed at the end of the window, along with a count of the number of aggregated events.

Related Name

hadoop.kms.audit.aggregation.window.ms

Default Value

10 second(s)

API Name

hadoop_kms_audit_aggregation_window_ms

Required

false

Hadoop KMS Authentication Signer Secret Provider Zookeeper Auth Type

Description

The Zookeeper authentication type, 'none' or kerberos.

Related Name

hadoop.kms.authentication.signer.secret.provider.zookeeper.auth.type

Default Value

none

API Name

hadoop_kms_authentication_signer_secret_provider_zookeeper_auth_type

Required

true

Hadoop KMS Authentication Signer Secret Provider Zookeeper Path

Description

The Zookeeper ZNode path where the KMS instances will store and retrieve the secret from.

Related Name

hadoop.kms.authentication.signer.secret.provider.zookeeper.path

Default Value

/hadoop-kms/hadoop-auth-signature-secret

API Name

hadoop_kms_authentication_signer_secret_provider_zookeeper_path

Required

true

Hadoop KMS Blacklist Decrypt EEK

Description

Add user which is needed to be blacklist for decrypt EncryptedKey CryptoExtension operations. Multiple list os user's can be added with comma separated.

Related Name

hadoop.kms.blacklist.DECRYPT_EEK

Default Value

hdfs

API Name

hadoop_kms_blacklist_decrypt_eek

Required

false

Hadoop KMS Cache Enable

Description

Whether the KMS will act as a cache for the backing KeyProvider. When the cache is enabled, operations like getKeyVersion, getMetadata, and getCurrentKey will sometimes return cached data without consulting the backing KeyProvider. Cached values are flushed when keys are deleted or modified.

Related Name

hadoop.kms.cache.enable

Default Value

true

API Name

hadoop_kms_cache_enable

Required

false

Hadoop Kms Cache Timeout

Description

Expiry time for the KMS key version and key metadata cache, in milliseconds. This affects getKeyVersion and getMetadata.

Related Name

hadoop.kms.cache.timeout.ms

Default Value

10 minute(s)

API Name

hadoop_kms_cache_timeout_ms

Required

false

Hadoop KMS Current Key Cache Timeout

Description

Expiry time for the KMS current key cache, in milliseconds. This affects getCurrentKey operations.

Related Name

hadoop.kms.current.key.cache.timeout.ms

Default Value

30 second(s)

API Name

hadoop_kms_current_key_cache_timeout_ms

Required

false

HDFS Proxy User Groups

Description

Allows the hdfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hdfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_groups

Required

false

HDFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hdfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hdfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hdfs_hosts

Required

false

Hive Proxy User Groups

Description

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hive.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hive_groups

Required

false

Hive Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hive user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hive.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hive_hosts

Required

false

HTTP Proxy User Groups

Description

Allows the HTTP superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.HTTP.groups

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_groups

Required

false

HTTP Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the HTTP user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.HTTP.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_HTTP_hosts

Required

false

HttpFS Proxy User Groups

Description

Allows the httpfs superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.httpfs.groups

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_groups

Required

false

HttpFS Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the httpfs user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.httpfs.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_httpfs_hosts

Required

false

Hue Proxy User Groups

Description

Allows the hue superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.hue.groups

Default Value

*

API Name

hadoop_kms_proxyuser_hue_groups

Required

false

Hue Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the hue user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.hue.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_hue_hosts

Required

false

Livy Proxy User Groups

Description

Allows the livy superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.livy.groups

Default Value

*

API Name

hadoop_kms_proxyuser_livy_groups

Required

false

Livy Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the livy user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.livy.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_livy_hosts

Required

false

Mapred Proxy User Groups

Description

Allows the mapred superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.mapred.groups

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_groups

Required

false

Mapred Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the mapred user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.mapred.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_mapred_hosts

Required

false

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.oozie.groups

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_groups

Required

false

Oozie Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.oozie.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_oozie_hosts

Required

false

Ranger Proxy User Groups

Description

Allows the ranger superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.ranger.groups

Default Value

*

API Name

hadoop_kms_proxyuser_ranger_groups

Required

false

Ranger Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the ranger user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.ranger.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_ranger_hosts

Required

false

YARN Proxy User Groups

Description

Allows the yarn superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.yarn.groups

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_groups

Required

false

YARN Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the yarn user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.yarn.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_yarn_hosts

Required

false

Zeppelin Proxy User Groups

Description

Allows the zeppelin superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

hadoop.kms.proxyuser.zeppelin.groups

Default Value

*

API Name

hadoop_kms_proxyuser_zeppelin_groups

Required

false

Zeppelin Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the zeppelin user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

hadoop.kms.proxyuser.zeppelin.hosts

Default Value

*

API Name

hadoop_kms_proxyuser_zeppelin_hosts

Required

false

Key Trustee KeyStoreProvider Directory

Description

Directory to the keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

Related Name

hadoop.kms.key.provider.uri

Default Value

/var/lib/kms-keytrustee

API Name

hadoop_security_key_provider_dir

Required

true

Hadoop Security Keystore JavaKeyStoreProvider Password

Description

If using the JavaKeyStoreProvider, the password for the keystore file.

Related Name

hadoop.security.keystore.JavaKeyStoreProvider.password

Default Value

API Name

hadoop_security_keystore_javakeystoreprovider_password

Required

false

Key Trustee KeyStoreProvider Configuration Directory

Description

Directory to store configuration of keystore file used by Key Trustee KeyStoreProvider that backs the KMS.

Related Name

keytrustee.kms.key.provider.conf.uri

Default Value

/var/lib/kms-keytrustee/keytrustee

API Name

keytrustee_security_key_provider_conf_dir

Required

true

Additional Java Configuration Options for KMS

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here.

Related Name

kms_java_opts

Default Value

API Name

kms_java_opts

Required

false

Ranger KMS Max Heapsize

Description

Maximum size for the Java Process heap. Passed to Java -Xmx. Measured in megabytes.

Related Name

ranger_kms_max_heap_size

Default Value

1 GiB

API Name

ranger_kms_max_heap_size

Required

true

Ranger KMS Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/kms/audit/hdfs/spool

API Name

ranger_kms_plugin_hdfs_audit_spool_directory

Required

true

Ranger KMS Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.kms.policy.cache.dir

Default Value

/var/lib/ranger/kms/policy-cache

API Name

ranger_kms_plugin_policy_cache_directory

Required

true

Ranger KMS Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/kms/audit/solr/spool

API Name

ranger_kms_plugin_solr_audit_spool_directory

Required

true

Ranger Kms Kts Server Canary Health Enabled

Description

Ranger Kms Kts Server Canary is enabled/disabled

Related Name

ranger_kms_server_kts_canary_health_enabled

Default Value

true

API Name

ranger_kms_server_kts_canary_health_enabled

Required

false

Ranger Kms Kts Server Canary Health Timeout

Description

Timeout for Ranger Kms Kts Server Canary health check.

Related Name

ranger_kms_server_kts_canary_health_timeout

Default Value

30 second(s)

API Name

ranger_kms_server_kts_canary_health_timeout

Required

false

Ranger KMS Tomcat Work Dir

Description

Tomcat work directory for Ranger KMS. This should generally not be changed.

Related Name

ranger_kms_tomcat_work_dir

Default Value

/var/lib/ranger/kms

API Name

ranger_kms_tomcat_work_dir

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kms.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kms.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Ranger KMS HTTP Port

Description

HTTP Port for Ranger KMS.

Related Name

ranger.service.http.port

Default Value

9292

API Name

ranger_kms_http_port

Required

false

Ranger KMS HTTPS Port

Description

HTTPS Port for Ranger KMS. Only used when SSL is enabled for Ranger KMS.

Related Name

ranger.service.https.port

Default Value

9494

API Name

ranger_kms_https_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger KMS Server with KTS TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger KMS Server with KTS might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientssl.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger KMS Server with KTS TLS/SSL Trust Store Password

Description

The password for the Ranger KMS Server with KTS TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

xasecure.policymgr.clientssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger KMS Server with KTS

Description

Encrypt communication between clients and Ranger KMS Server with KTS using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger KMS Server with KTS TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger KMS Server with KTS is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.service.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger KMS Server with KTS TLS/SSL Server Keystore File Password

Description

The password for the Ranger KMS Server with KTS keystore file.

Related Name

ranger.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_KMS_KTS_RANGER_KMS_SERVER_KTS_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Ranger Raz Properties in Cloudera Runtime 7.2.15

Role groups:

Ranger Raz Server

Advanced

Ranger Raz Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger Raz Server Advanced Configuration Snippet (Safety Valve) for ranger-raz-conf/ranger-raz-audit.xml

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.

- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_raz_server_fd_thresholds

Required

false

Ranger Raz Server Host Health Test

Description

When computing the overall Ranger Raz Server health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_raz_server_host_health_enabled

Required

false

Ranger Raz Server Process Health Test

Description

Enables the health test that the Ranger Raz Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_raz_server_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

ranger.raz.tag.rest.supports.tag.deltas

Required

false

Raz Tomcat Ciphers

Description

A list of comma separated Tomcat ciphers supported by Raz server for SSL.

Related Name

ranger.raz.tomcat.ciphers

Default Value

API Name

ranger.raz.tomcat.ciphers

Required

false

Ranger Raz Azure Storage Accounts

Description

A comma-separated list of storage accounts from which user delegation keys will be created, cached, and renewed.

Related Name

ranger.raz.azure.storage.accounts

Default Value

API Name

ranger_raz_azure_storage_accounts

Required

false

Ranger Raz Max Heapsize

Description

Maximum size for the Java process heap. Passed to Java -Xmx.

Related Name

ranger_raz_max_heap_size

Default Value

1 GiB

API Name

ranger_raz_max_heap_size

Required

true

Ranger Raz Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/ranger-raz/audit/hdfs/spool

API Name

ranger_raz_plugin_hdfs_audit_spool_directory

Required

true

Ranger Raz Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.raz.policy.cache.dir

Default Value

/var/lib/ranger/ranger-raz/policy-cache

API Name

ranger_raz_plugin_policy_cache_directory

Required

true

Ranger Raz Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/ranger-raz/audit/solr/spool

API Name

ranger_raz_plugin_solr_audit_spool_directory

Required

true

Hive Proxy User Groups

Description

Allows the hive superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

ranger.raz.proxyuser.hive.groups

Default Value

*

API Name

ranger_raz_proxyuser_hive_groups

Required

Oozie Proxy User Groups

Description

Allows the oozie superuser to impersonate any members of a comma-delimited list of groups. The default '*' allows all groups. To disable entirely, use a string that doesn't correspond to a group name, such as '_no_group_'.

Related Name

ranger.raz.proxyuser.oozie.groups

Default Value

*

API Name

ranger_raz_proxyuser_oozie_groups

Required

false

Oozie Proxy User Hosts

Description

Comma-delimited list of hosts where you want to allow the oozie user to impersonate other users. The default '*' allows all hosts. To disable entirely, use a string that doesn't correspond to a host name, such as '_no_host'.

Related Name

ranger.raz.proxyuser.oozie.hosts

Default Value

*

API Name

ranger_raz_proxyuser_oozie_hosts

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

Raz HTTP Port

Description

The HTTP port for Ranger Raz.

Related Name

ranger.raz.service.http.port

Default Value

6081

API Name

ranger_raz_service_http_port

Required

false

Raz HTTPS Port

Description

The HTTPS port for Ranger Raz.

Related Name

ranger.raz.service.https.port

Default Value

6082

API Name

ranger_raz_service_https_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger Raz Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger Raz Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

xasecure.policymgr.clientssl.truststore

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger Raz Server TLS/SSL Trust Store Password

Description

The password for the Ranger Raz Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

xasecure.policymgr.clientssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger Raz Server

Description

Encrypt communication between clients and Ranger Raz Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger.raz.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger Raz Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger Raz Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger.raz.service.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger Raz Server TLS/SSL Server Keystore File Password

Description

The password for the Ranger Raz Server keystore file.

Related Name

ranger.raz.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

Healthy Ranger Raz Server Monitoring Thresholds

Description

The health test thresholds of the overall Ranger Raz Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger Raz Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger Raz Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RAZ_RANGER_RAZ_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Ranger RMS Server

Advanced

Ranger RMS Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Ranger RMS Server Advanced Configuration Snippet (Safety Valve) for ranger-rms-conf/ranger-rms-policymgr-ssl.xml

log_threshold

Required

false

Ranger RMS Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Ranger RMS Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Ranger RMS Server Max Log Size

Description

The maximum size, in megabytes, per log file for Ranger RMS Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

ranger_rms_server_fd_thresholds

Required

false

Ranger RMS Server Host Health Test

Description

When computing the overall Ranger RMS Server health, consider the host's health.

Related Name

Default Value

true

API Name

ranger_rms_server_host_health_enabled

Required

false

Ranger RMS Server Process Health Test

Description

Enables the health test that the Ranger RMS Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

ranger_rms_server_scm_health_enabled

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ranger RMS JWKS Provider Url

Description

The {{JWKS_PROVIDER_URL}} is a placeholder value which will be replaced with the IDBroker endpoint to get JWKS (JSON Web Key Set) when present in the cluster. The placeholder can be replaced to have custom JWKS provider url endpoint.

Related Name

ranger-rms.auth.method.dt.params.jwks.provider-url

Default Value

JWKS_PROVIDER_URL

API Name

ranger-rms.auth.method.dt.params.jwks.provider-url

Required

false

Ranger RMS JWT Audiences

Description

List of comma separated audiences whose claims are supported by Ranger RMS service.

Related Name

ranger-rms.auth.method.dt.params.jwt.audiences

Default Value

idbroker, rms

API Name

ranger-rms.auth.method.dt.params.jwt.audiences

Required

false

Ranger RMS Server TLS/SSL Keystore File Alias

Description

The alias for the Ranger RMS Server TLS/SSL keystore file. User must configure the alias for the Ranger RMS keystore.

Related Name

ranger-rms.service.https.attrib.keystore.keyalias

Default Value

API Name

ranger-rms.service.https.attrib.keystore.keyalias

Required

false

Ranger RMS Access log Rotation Max Days

Description

The number of days to retain Ranger RMS Access logs before they are automatically rotated.

Related Name

ranger-rms.accesslog.rotate.max.days

Default Value

15

API Name

ranger-rms_accesslog_rotate_max_days

Required

false

Enable Mapping Hive Managed Tables

Description

Ranger RMS, by default keeps track of external Hive table locations maintained in Hive Metastore. If Hive managed tables also need to be tracked, then enable this configuration.

Related Name

ranger-rms.HMS.map.managed.tables

Default Value

false

API Name

ranger_rms_hms_map_managed_tables

Required

false

Ranger RMS Hive Metastore Source Service Name

Description

Hdfs plugin service name managed in Ranger Admin. RMS needs to associate the HDFS locations with this service name before starting. Along with "Ranger RMS Hive Metastore Target Service Name" parameter, RMS will be able to map HMS data to RMS entities and persist them in RMS database. The default value points to default Hdfs plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Hdfs plugin service name in Ranger Admin.

Related Name

ranger-rms.HMS.source.service.name

Default Value

cm_hdfs

API Name

ranger_rms_hms_source_service_name

Required

false

Ranger RMS Hive Metastore Target Service Name

Description

Hive plugin service name managed in Ranger Admin. RMS need to associate the Hive tables with this service name before starting. The default value points to default Hive plugin service name that gets created as a part of Ranger service installation from Cloudera Manager. Need to update the parameter value if using different Hive plugin service name in Ranger Admin.

Related Name

ranger-rms.HMS.target.service.name

Default Value

cm_hive

API Name

ranger_rms_hms_target_service_name

Required

false

Ranger RMS Max Heapsize

Description

Maximum size for the Java process heap. Passed to Java -Xmx.

Related Name

ranger_rms_max_heap_size

Default Value

1 GiB

API Name

ranger_rms_max_heap_size

Required

true

Ranger RMS Polling Notifications Frequency

Description

Polling notifications frequency in milliseconds for Ranger RMS.

Related Name

ranger-rms.polling.notifications.frequency.ms

Default Value

30 second(s)

API Name

ranger_rms_polling_notifications_frequency_ms

Required

false

Ranger RMS Server HA

Description

Enable High availability for Ranger RMS server.

Related Name

ranger-rms.server.ha.enabled

Default Value

false

API Name

ranger_rms_server_ha_enabled

Required

false

Ranger RMS HA Zookeeper ACL

Description

Zookeeper ACL for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.acl

Default Value

API Name

ranger_rms_server_ha_zookeeper_acl

Required

false

Ranger RMS Server Zookeeper ACL Auth

Description

Zookeeper ACL Auth for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.acl.auth

Default Value

API Name

ranger_rms_server_ha_zookeeper_acl_auth

Required

false

Ranger RMS Server HA Zookeeper Num Retries

Description

Number of retries to connect zookeeper for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.num.retries

Default Value

3

API Name

ranger_rms_server_ha_zookeeper_num_retries

Required

false

Ranger RMS Server HA Zookeeper Retry Sleeptime

Description

Zookeeper retry sleeptime in milliseconds for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.retry.sleeptime.ms

Default Value

1 second(s)

API Name

ranger_rms_server_ha_zookeeper_retry_sleeptime_ms

Required

false

Ranger RMS Server HA Zookeeper Session Timeout

Description

Zookeeper session timeout in milliseconds for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.session.timeout.ms

Default Value

20 second(s)

API Name

ranger_rms_server_ha_zookeeper_session_timeout_ms

Required

false

Ranger RMS Server HA Zookeeper Zkroot

Description

Zookeeper Zkroot for Ranger RMS server.

Related Name

ranger-rms.server.ha.zookeeper.zkroot

Default Value

/ranger-rms

API Name

ranger_rms_server_ha_zookeeper_zkroot

Required

false

Ranger RMS Server IDs

Description

Ranger RMS Server IDs.

Related Name

ranger-rms.server.ids

Default Value

API Name

ranger_rms_server_ids

Required

false

Ranger RMS Supported Uri Scheme

Description

Hive service storage type used to store Hive's tables.

Related Name

ranger-rms.supported.uri.scheme

Default Value

hdfs

API Name

ranger_rms_supported_uri_scheme

Required

false

Ranger RMS Tomcat Work Dir

Description

Tomcat work directory for Ranger RMS.

Related Name

ranger-rms.tomcat.work.dir

Default Value

/var/lib/ranger/ranger-rms/work

API Name

ranger_rms_tomcat_work_dir

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

RMS HTTP Port

Description

The HTTP port for Ranger RMS.

Related Name

ranger-rms.service.http.port

Default Value

8383

API Name

ranger_rms_service_http_port

Required

false

RMS HTTPS Port

Description

The HTTPS port for Ranger RMS.

Related Name

ranger-rms.service.https.port

Default Value

8484

API Name

ranger_rms_service_https_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Ranger RMS Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Ranger RMS Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ranger-rms.truststore.file

Default Value

API Name

ssl_client_truststore_location

Required

false

Ranger RMS Server TLS/SSL Trust Store Password

Description

The password for the Ranger RMS Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ranger-rms.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Ranger RMS Server

Description

Encrypt communication between clients and Ranger RMS Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ranger-rms.service.https.attrib.ssl.enabled

Default Value

false

API Name

ssl_enabled

Required

false

Ranger RMS Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Ranger RMS Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ranger-rms.service.https.attrib.keystore.file

Default Value

API Name

ssl_server_keystore_location

Required

false

Ranger RMS Server TLS/SSL Server Keystore File Password

Description

The password for the Ranger RMS Server keystore file.

Related Name

ranger-rms.service.https.attrib.keystore.pass

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

Healthy Ranger RMS Server Monitoring Thresholds

Description

The health test thresholds of the overall Ranger RMS Server health. The check returns "Concerning" health if the percentage of "Healthy" Ranger RMS Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Ranger RMS Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.0 %, Critical: 49.0 %

API Name

RANGER_RMS_RANGER_RMS_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Cloud Account Name

Description

Name of an AWS account. The associated AWS keys are emitted to Hue, Impala and the Hive Metastore Server.

Related Name

Default Value

API Name

cloud_account

Required

true

Security

Credentials Protection Policy

Description

Determines a security policy for the distribution of AWS account credentials to cluster services. 'More Secure': Encrypted at all times and directly available to a limited set of services. 'Less Secure': Credentials may be in plain text in some configuration files for specific services in the cluster. When IAM profiles are used, credentials are externally managed in AWS and there are no AWS credentials in any configuration files, so this setting is not applicable.

Related Name

Default Value

SECURE

API Name

key_distribution_policy

role_config_suppression_client_config_root_dir

Required

true

Schema Registry Server

Advanced

Schema Registry Server XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Schema Registry Server, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value

API Name

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions

and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Schema Registry Server Advanced Configuration Snippet (Safety Valve) for ranger-schema-registry-audit.xml

Description

For advanced use only. A string to be inserted into ranger-schema-registry-audit.xml for this role only.

Related Name

Default Value

API Name

ranger-schema-registry-audit.xml_role_safety_valve

Required

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger

condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

schema_registry_server_fd_thresholds

Required

false

Schema Registry Server Host Health Test

Description

When computing the overall Schema Registry Server health, consider the host's health.

Related Name

Default Value

true

API Name

schema_registry_server_host_health_enabled

Required

false

Schema Registry Server Process Health Test

Description

Enables the health test that the Schema Registry Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

schema_registry_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Ranger Schema Registry Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.schema-registry.policy.cache.dir

Default Value

/var/lib/schemaregistry/policy-cache

API Name

ranger.plugin.schema-registry.policy.cache.dir

Required

true

Ranger Schema Registry Service Name

Description

Schema Registry service name in Ranger. If this parameter is set to the placeholder value '{{GENERATED_RANGER_SERVICE_NAME}}', a generated service name will be used, and if necessary, created. The generated service name will refer to the name of the cluster and the name of this SchemaRegistry service. The name can consist of alphanumeric, '-' and '_' characters.

Related Name

ranger.plugin.schema-registry.service.name

Default Value

cm_schema-registry

API Name

ranger.plugin.schema-registry.service.name

Required

false

Ranger Schema Registry Manager Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/schemaregistry/audit/hdfs/spool

API Name

ranger_schemaregistry_plugin_hdfs_audit_spool_directory

Required

true

Ranger Schema Registry Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/schemaregistry/audit/solr/spool

API Name

ranger_schemaregistry_plugin_solr_audit_spool_directory

Required

true

Schema Registry Admin Port

Description

The admin port for the server.

Related Name

schema.registry.adminPort

Default Value

7789

API Name

schema.registry.adminPort

Required

true

Schema Registry Allowed Resources

Description

Allowed resources for Schema Registry.

Related Name

schema.registry.allowed.resources

Default Value

401.html, back-default.png, favicon.ico

API Name

schema.registry.allowed.resources

Required

false

Enable TLS with Oracle DB

Description

Enable TLS with Oracle as DB for Schema Registry.

Related Name

schema.registry.enable.TLS.Oracle

Default Value

false

API Name

schema.registry.enable.TLS.Oracle

Required

false

Hashing Algorithm Used For Generating Fingerprints

Description

Schema Registry hashes the schema text for performance reasons. It is important to remember that changing this value to a different algorithm will require you to manually rehash all existing fingerprints and update the database accordingly.

Related Name

schema.registry.hash.function

Default Value

MD5

API Name

schema.registry.hash.function

Required

true

Password For HTTP Proxy Server Username

Description

Password For HTTP Proxy Server Username.

Related Name

schema.registry.httpProxyPassword

Default Value

API Name

schema.registry.httpProxyPassword

Required

false

HTTP Proxy Server

Description

URL for http proxy server. Please enter it in format protocol_name://host_name:port_number.

Related Name

schema.registry.httpProxyServer

Default Value

API Name

schema.registry.httpProxyServer

Required

false

HTTP Proxy Server Availability

Description

Boolean to set if HTTP Proxy Server is available or not.

Related Name

schema.registry.httpProxyServer.available

Default Value

false

API Name

schema.registry.httpProxyServer.available

Required

false

Username For HTTP Proxy Server

Description

Username for http proxy server.

Related Name

schema.registry.httpProxyUsername

Default Value

API Name

schema.registry.httpProxyUsername

Required

false

Schema Registry Jar Storage Directory Path

Description

Jar storage directory path.

Related Name

schema.registry.jar.storage.directory.path

Default Value

/tmp/schema-registry/local-jars

API Name

schema.registry.jar.storage.directory.path

Required

false

Schema Registry Jar Storage HDFS URL

Description

URL of the directory to be used for storing jars on HDFS when HDFS is not selected as an optional dependency.

Related Name

schema.registry.jar.storage.hdfs.url

Default Value

hdfs://localhost:8020

API Name

schema.registry.jar.storage.hdfs.url

Required

false

Schema Registry Jar Storage Type

Description

Jar storage type for storing jars on the local filesystem or on HDFS. If 'hdfs' is set but HDFS is not selected as an optional dependency, please provide a value for the 'Schema Registry Jar Storage HDFS URL' property.

Related Name

schema.registry.jar.storage.type

Default Value

local

API Name

schema.registry.jar.storage.type

Required

false

Oracle TLS javax.net.ssl.keyStore

Description

Path to keystore file if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.keyStore

Default Value

API Name

schema.registry.javax.net.ssl.keyStore

Required

false

Oracle TLS javax.net.ssl.keyStorePassword

Description

KeyStorePassword if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.keyStorePassword

Default Value

API Name

schema.registry.javax.net.ssl.keyStorePassword

Required

false

Oracle TLS javax.net.ssl.keyStoreType

Description

KeyStoreType type if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.keyStoreType

Default Value

API Name

schema.registry.javax.net.ssl.keyStoreType

Required

false

Oracle TLS javax.net.ssl.trustStore

Description

Required Path to truststore file if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.trustStore

Default Value

API Name

schema.registry.javax.net.ssl.trustStore

Required

false

Oracle TLS javax.net.ssl.trustStorePassword

Description

TrustStorePassword type if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.trustStorePassword

Default Value

API Name

schema.registry.javax.net.ssl.trustStorePassword

Required

false

Oracle TLS javax.net.ssl.trustStoreType

Description

Required Truststore type if enabling TLS using Oracle DB.

Related Name

schema.registry.javax.net.ssl.trustStoreType

Default Value

API Name

schema.registry.javax.net.ssl.trustStoreType

Required

false

Java Home Path Override

Description

Java home path override for Schema Registry.

Related Name

schema.registry.jdk.home

Default Value

API Name

schema.registry.jdk.home

Required

false

Schema Registry Kerberos Name Rules

Description

Kerberos name rules for Schema Registry.

Related Name

schema.registry.kerberos.name.rules

Default Value

RULE:[2:$1@$0]([jt]t@.*EXAMPLE.COM)s/.*/$MAPRED_USER/ RULE:[2:$1@$0]([nd]n@.*EXAMPLE.COM)s/.*/$HDFS_USER/DEFAULT

API Name

schema.registry.kerberos.name.rules

Required

false

Schema Registry Kerberos Non Browser User Agents

Description

Non browser user agents if kerberos is enabled.

Related Name

schema.registry.kerberos.non.browser.user.agents

Default Value

API Name

schema.registry.kerberos.non.browser.user.agents

Required

false

Schema Registry MaxRequestHeaderSize

Description

Maximum Request Header Size for the Schema Registry, in KiB.

Related Name

schema.registry.maxRequestHeaderSize

Default Value

8

API Name

schema.registry.maxRequestHeaderSize

Required

false

Oracle TLS oracle.net.authentication_services

Description

Oracle net authentication service if enabling TLS using Oracle DB.

Related Name

schema.registry.oracle.net.authentication_services

Default Value

API Name

schema.registry.oracle.net.authentication_services

Required

false

Oracle TLS oracle.net.ssl_cipher_suites

Description

Oracle net ssl cipher suites if enabling TLS using Oracle DB e.g. SSL_DH_DSS_WITH_DES_CBC_SHA.

Related Name

schema.registry.oracle.net.ssl_cipher_suites

Default Value

API Name

schema.registry.oracle.net.ssl_cipher_suites

Required

false

Oracle TLS oracle.net.ssl_server_dn_match

Description

ORacle ssl server domain name match if enabling TLS using Oracle DB.

Related Name

schema.registry.oracle.net.ssl_server_dn_match

Default Value

true

API Name

schema.registry.oracle.net.ssl_server_dn_match

Required

false

Version of oracle.net.ssl

Description

Oracle net ssl version.

Related Name

schema.registry.oracle.net.ssl_version

Default Value

API Name

schema.registry.oracle.net.ssl_version

Required

false

Schema Registry Port

Description

The port on which server accepts connections.

Related Name

schema.registry.port

Default Value

7788

API Name

schema.registry.port

Required

true

Schema Registry Proxyuser Knox Hosts

Description

Comma separated list of IP addresses from which knox can act as a trusted proxy.

Related Name

schema.registry.proxyuser.knox.hosts

Default Value

*

API Name

schema.registry.proxyuser.knox.hosts

Required

true

Schema Registry Servlet Filter

Description

Schema Registry servlet filter class.

Related Name

schema.registry.servlet.filter

Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

API Name

schema.registry.servlet.filter

Required

true

Schema Registry Admin Port (SSL)

Description

HTTPS admin port Schema Registry node runs on when SSL is enabled.

Related Name

schema.registry.ssl.adminPort

Default Value

7791

API Name

schema.registry.ssl.adminPort

Required

false

SSL Keystore Type

Description

The keystore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then this keystore type will come from CM settings.

Related Name

schema.registry.ssl.keyStoreType

Default Value

API Name

schema.registry.ssl.keyStoreType

Required

false

Schema Registry Port (SSL)

Description

HTTPS port Schema Registry node runs on when SSL is enabled.

Related Name

schema.registry.ssl.port

Default Value

7790

API Name

schema.registry.ssl.port

Required

false

SSL TrustStore Type

Description

The truststore type. It is blank by default but required if schema registry's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then this keystore type will come from CM settings.

Related Name

schema.registry.ssl.trustStoreType

Default Value

API Name

schema.registry.ssl.trustStoreType

Required

false

SSL ValidateCerts

Description

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method (CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java system properties. E.g: -Ddw.server.applicationConnectors[0].enableCRLDP=true (more details at https://www.dropwizard.io/en/latest/manual/core.html)

Related Name

schema.registry.ssl.validateCerts

Default Value

false

API Name

schema.registry.ssl.validateCerts

Required

false

SSL ValidatePeers

Description

Whether or not to validate TLS peer certificates.

Related Name

schema.registry.ssl.validatePeers

Default Value

false

API Name

schema.registry.ssl.validatePeers

Required

false

Schema Registry Query Timeout

Description

Schema Registry query timeout.

Related Name

schema.registry.storage.query.timeout

Default Value

30 second(s)

API Name

schema.registry.storage.query.timeout

Required

true

Schema Registry Token Validity

Description

Kerberos token validity for Schema Registry in ms.

Related Name

schema.registry.token.validity

Default Value

36000

API Name

schema.registry.token.validity

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the

value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Schema Registry Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Schema Registry Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

schema.registry.ssl.trustStorePath

Default Value

API Name

ssl_client_truststore_location

Required

false

Schema Registry Server TLS/SSL Trust Store Password

Description

The password for the Schema Registry Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

schema.registry.ssl.trustStorePassword

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Schema Registry Server

Description

Encrypt communication between clients and Schema Registry Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Schema Registry Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Schema Registry Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

schema.registry.ssl.keyStorePath

Default Value

API Name

ssl_server_keystore_location

Required

false

Schema Registry Server TLS/SSL Server Keystore File Password

Description

The password for the Schema Registry Server keystore file.

Related Name

schema.registry.ssl.keyStorePassword

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Schema Registry Server Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Log Directory parameter.

false

API Name

role_config_suppression_schema.registry.kerberos.non.browser.user.agents

Required

true

Suppress Parameter Validation: Schema Registry MaxRequestHeaderSize

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry MaxRequestHeaderSize parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.maxrequestheadersize

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.authentication_services

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.authentication_services parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oracle.net.authentication_services

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.ssl_cipher_suites parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oracle.net.ssl_cipher_suites

Required

true

Suppress Parameter Validation: Version of oracle.net.ssl

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Version of oracle.net.ssl parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.oracle.net.ssl_version

Required

true

Suppress Parameter Validation: Schema Registry Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.port

Required

true

Suppress Parameter Validation: Schema Registry Proxyuser Knox Hosts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Proxyuser Knox Hosts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.proxyuser.knox.hosts

Required

true

Suppress Parameter Validation: Schema Registry Servlet Filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Servlet Filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.servlet.filter

Required

true

Suppress Parameter Validation: Schema Registry Admin Port (SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Admin Port (SSL) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.adminport

Required

true

Suppress Parameter Validation: SSL Keystore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.keystoretype

Required

true

Suppress Parameter Validation: Schema Registry Port (SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Port (SSL) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.port

Required

true

Suppress Parameter Validation: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL ValidatePeers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidatePeers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema.registry.ssl.validatepeers

Required

true

Suppress Parameter Validation: Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema_registry_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: Schema Registry Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Server TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_schemaregistry_schema_registry_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_schemaregistry_schema_registry_server_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_schemaregistry_schema_registry_server_host_health

Required

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Healthy Schema Registry Server Monitoring Thresholds

Description

The health test thresholds of the overall Schema Registry Server health. The check returns "Concerning" health if the percentage of "Healthy" Schema Registry Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Schema Registry Servers falls below the critical threshold.

Related Name

Default Value

Warning: 99.99 %, Critical: 49.99 %

API Name

SCHEMAREGISTRY_SCHEMA_REGISTRY_SERVER_healthy_thresholds

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

API Name

service_config_suppression_database_name

Required

true

Suppress Parameter Validation: Schema Registry Database User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_database_password

Required

true

Suppress Parameter Validation: Schema Registry Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_database_port

Required

true

Suppress Parameter Validation: Schema Registry Database User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Database User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_database_user

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Configuration Validator: Schema Registry Server Count Validator

Description

Whether to suppress configuration warnings produced by the Schema Registry Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_schema_registry_server_count_validator

Required

true

Suppress Parameter Validation: Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Schema Registry Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_schemaregistry_service_env_safety_valve

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Health Test: Schema Registry Server Health

Description

Whether to suppress the results of the Schema Registry Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_schemaregistry_schema_registry_server_healthy

Required

true

Solr Properties in Cloudera Runtime 7.2.15

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/solr

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

90

API Name

client_config_priority

Required

true

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Service-Wide

Advanced

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

solr

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

solr

API Name

process_username

Required

true

Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-audit.xml

Description

For advanced use only, a string to be inserted into ranger-solr-audit.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

ranger_audit_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-policymgr-ssl.xml

Description

For advanced use only, a string to be inserted into ranger-solr-policymgr-ssl.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

ranger_policymgr_ssl_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for ranger-solr-security.xml

Description

For advanced use only, a string to be inserted into ranger-solr-security.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

ranger_security_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for core-site.xml

Description

For advanced use only, a string to be inserted into core-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

solr_core_site_safety_valve

Required

false

Solr Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

solr_env_safety_valve

Required

false

Solr Service Advanced Configuration Snippet (Safety Valve) for hdfs-site.xml

Description

For advanced use only, a string to be inserted into hdfs-site.xml. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

solr_hdfs_site_safety_valve

Required

false

Enable Solrd Watchdog

Description

Enable the background watchdog thread that can kill Catalina process if Solr is not responsive.

Related Name

Default Value

true

API Name

solrd_enable_watchdog

Required

false

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Healthy Solr Server Monitoring Thresholds

Description

The health test thresholds of the overall Solr Server health. The check returns "Concerning" health if the percentage of "Healthy" Solr Servers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" Solr Servers falls below the critical threshold.

Related Name

Default Value

Warning: 95.0 %, Critical: 90.0 %

API Name

solr_solr_servers_healthy_thresholds

Required

false

Other

HDFS Data Directory

Description

HDFS directory used for storage by this Solr service.

Related Name

Default Value

/solr

API Name

hdfs_data_dir

Required

true

HDFS Service

Description

Name of the HDFS service that this Search service instance depends on

Related Name

Default Value

API Name

hdfs_service

Required

true

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.solr.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded for IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.solr.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service

Description

Name of the Ranger service that this Solr service instance depends on. This config is used for enabling Ranger authorization in the Solr instance not used by Ranger.

Related Name

Default Value

API Name

ranger_service

Required

false

Solr Server for Upgrade

Description

Solr server to be used while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

Related Name

Default Value

API Name

solr_server_for_upgrade

Required

false

Upgrade Backup Directory

Description

Directory on the HDFS file system that is used as the backup directory while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7.

Related Name

Default Value

/user/solr/upgrade_backup

API Name

solr_upgrade_backup_dir

Required

false

Upgrade Metadata Directory

Description

Directory on the local file system containing the migrated configurations and metadata required while upgrading from CDH 5 to CDH 6 or to Cloudera Runtime 7. Note: This directory should be present in the Solr Server specified in 'Solr Server for Upgrade'.

Related Name

Default Value

/var/lib/upgrade/solr_config

API Name

solr_upgrade_metadata_dir

Required

true

Solrd Watchdog Timeout

Description

If Solr does not respond on its web URL within this time interval, the Catalina process is killed.

Related Name

Default Value

1 minute(s), 10 second(s)

API Name

solrd_watchdog_timeout

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Search service instance depends on

Related Name

Default Value

API Name

zookeeper_service

Required

true

ZooKeeper Znode

Description

ZooKeeper znode used to store information about this Solr service.

Related Name

Default Value

/solr

API Name

zookeeper_znode

Required

true

Security

Enable Ranger Authorization for the Infrastructure Solr Service

Description

Enable fine-grained security using Ranger for the infrastructure (infra) Solr service. This option is only for the Solr service that the Ranger service is using (for ranger-audits, etc.). No other Solr service can or should enable this option.

Related Name

Default Value

false

API Name

enable_ranger_authorization

Required

false

Kerberos Principal

Description

Kerberos principal short name used by all roles of this service.

Related Name

Default Value

solr

API Name

kerberos_princ_name

Required

true

Active Directory Domain

Description

Use this field for Active Directory configurations only, when combined with a simple username value in the "LDAP Bind User Distinguished Name" field, it will result in a UPM of user@example.com used for search/bind operations for authenticated user lookups.

Related Name

Default Value

API Name

ldap_domain

Required

false

Ranger DFS Audit Path

Description

The DFS path on which Ranger audits are written. The special placeholder '${ranger_base_audit_url}' should be used as the prefix, in order to use the centralized location defined in the Ranger service.

Related Name

xasecure.audit.destination.hdfs.dir

Default Value

$ranger_base_audit_url/solr

API Name

ranger_audit_hdfs_dir

Required

false

Ranger Audit DFS Spool Dir

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/solr/audit/hdfs/spool

API Name

ranger_audit_hdfs_spool_dir

Required

false

Ranger Audit Solr Spool Dir

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/solr/audit/solr/spool

API Name

ranger_audit_solr_spool_dir

Required

false

Ranger Policy Cache Directory

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.solr.policy.cache.dir

Default Value

/var/lib/ranger/solr/policy-cache

API Name

ranger_policy_cache_dir

Required

false

Enable LDAP Authentication

Description

When checked, LDAP-based authentication for users is enabled.

Related Name

Default Value

false

API Name

solr_enable_ldap_auth

Required

false

Solr TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Solr is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

Default Value

API Name

solr_https_keystore_file

Required

false

Solr TLS/SSL Server Keystore File Password

Description

The password for the Solr keystore file.

Related Name

solr.jetty.keystore.password

Default Value

API Name

solr_https_keystore_password

Required

false

Solr TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Solr might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

Default Value

API Name

solr_https_truststore_file

Required

false

Solr TLS/SSL Trust Store Password

Description

The password for the Solr TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

solr.jetty.truststore.password

Default Value

API Name

solr_https_truststore_password

Required

false

LDAP BaseDN

Description

This parameter is useful when authenticating against a non-Active Directory server, such as OpenLDAP. When set, this parameter is used to convert the username into the LDAP Distinguished Name (DN), so that the resulting DN looks like uid=username,*this parameter*. For example, if this parameter is set to "ou=People,dc=cloudera,dc=com", and the username passed in is "mike", the resulting authentication passed to the LDAP server look like "uid=mike,ou=People,dc=cloudera,dc=com". This parameter is mutually exclusive with Active Directory Domain.

Related Name

Default Value

API Name

solr_ldap_basedn

Required

false

Enable LDAP TLS

Description

If true, attempts to establish a TLS (Transport Layer Security) connection with an LDAP server that was specified with ldap://. Not required when using an LDAP URL with prefix ldaps://, because that already specifies TLS. This option is also known as "Use StartTLS".

Related Name

Default Value

false

API Name

solr_ldap_enable_starttls

Required

false

LDAP URL

Description

The URL of the LDAP Server. The URL must be prefixed with ldap:// or ldaps:// . The URL can optionally specify a custom port if necessary, but by default the ldap:// will connect to port 389, and the ldaps:// will connect to port 636. Note that passwords will be in the clear if ldap:// is used, and by fall 2020 Active directory servers will no longer allow non LDAPS connections to bind to AD hosts with LDAP signing enabled. See microsoft knowledge document 935834 for more information.

Related Name

Default Value

API Name

solr_ldap_uri

Required

false

Solr Secure Authentication

Description

Choose the authentication mechanism used by Solr.

Related Name

Default Value

simple

API Name

solr_security_authentication

Required

false

Enable TLS/SSL for Solr

Description

Encrypt communication between clients and Solr using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)). Additional manual steps must be performed; see Enabling TLS/SSL for Solr.

Related Name

Default Value

false

API Name

solr_use_ssl

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory

Description

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Solr Server Logging Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Configuration Validator: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the Heap Dump Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Configuration Validator: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the Custom Control Group Resources (overrides Cgroup settings) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Configuration Validator: Role Triggers

Description

Whether to suppress configuration warnings produced by the Role Triggers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Configuration Validator: Solr Admin Port

Description

Whether to suppress configuration warnings produced by the Solr Admin Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_admin_port

Required

true

Suppress Configuration Validator: Solr Data Directory

Description

Whether to suppress configuration warnings produced by the Solr Data Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_data_dir

Required

true

Suppress Configuration Validator: Solr HTTP Port

Description

Whether to suppress configuration warnings produced by the Solr HTTP Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_http_port

Required

true

Suppress Configuration Validator: Solr HTTPS port

Description

Whether to suppress configuration warnings produced by the Solr HTTPS port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_https_port

Required

true

Suppress Configuration Validator: Java Heap Size of Solr Server in Bytes

Description

Whether to suppress configuration warnings produced by the Java Heap Size of Solr Server in Bytes configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_java_heapsize

Required

true

Suppress Configuration Validator: Java Configuration Options for Solr Server

Description

Whether to suppress configuration warnings produced by the Java Configuration Options for Solr Server configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_java_opts

Required

true

Suppress Configuration Validator: Solr Load Balancer

Description

Whether to suppress configuration warnings produced by the Solr Load Balancer configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_load_balancer

Required

true

Suppress Configuration Validator: Solr Server Log Directory

Description

Whether to suppress configuration warnings produced by the Solr Server Log Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_log_dir

Required

true

Suppress Configuration Validator: Solr Plugins Directory

Description

Whether to suppress configuration warnings produced by the Solr Plugins Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_plugins_dir

Required

true

Suppress Configuration Validator: Solr Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Solr Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_solr_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Suppress Parameter Validation: Solr TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_https_truststore_file

Required

true

Suppress Parameter Validation: Solr TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_https_truststore_password

Required

true

Suppress Parameter Validation: LDAP BaseDN

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP BaseDN parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_ldap_basedn

Required

true

Suppress Configuration Validator: LDAP TLS Validator

Description

Whether to suppress configuration warnings produced by the LDAP TLS Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_solr_ldap_tls_validator

Required

true

Suppress Parameter Validation: LDAP URL

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LDAP URL parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_ldap_uri

Required

true

Suppress Configuration Validator: LDAP Secure URI and Start TLS Validator

Description

Whether to suppress configuration warnings produced by the LDAP Secure URI and Start TLS Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_solr_ldaps_or_tls_validator

Required

true

Suppress Configuration Validator: Solr Server Count Validator

Description

Whether to suppress configuration warnings produced by the Solr Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_solr_server_count_validator

Required

true

Suppress Parameter Validation: Upgrade Backup Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Backup Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_upgrade_backup_dir

Required

true

Suppress Parameter Validation: Upgrade Metadata Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Upgrade Metadata Directory parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solr_upgrade_metadata_dir

Required

true

Suppress Parameter Validation: Solrd Watchdog Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solrd Watchdog Timeout parameter.

Related Name

Default Value

false

API Name

service_config_suppression_solrd_watchdog_timeout

Required

true

Suppress Parameter Validation: ZooKeeper Znode

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the ZooKeeper Znode parameter.

Related Name

Default Value

false

API Name

service_config_suppression_zookeeper_znode

Required

true

Suppress Health Test: Solr Server Health

Description

Whether to suppress the results of the Solr Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_solr_solr_servers_healthy

Required

true

Solr Server

Advanced

Solr Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from

publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Java Configuration Options for Solr Server

Description

These arguments will be passed as part of the Java command line. Commonly, garbage collection flags, PermGen, or extra debugging flags would be passed here. Note: When CM version is 6.3.0 or greater, {{JAVA_GC_ARGS}} will be replaced by JVM Garbage Collection arguments based on the runtime Java JVM version.

Related Name

Default Value

JAVA_GC_ARGS

API Name

solr_java_opts

Required

false

Solr Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

SOLR_SERVER_role_env_safety_valve

Required

false

ZooKeeper Client Timeout

Description

The time in milliseconds a client is allowed to not talk to ZooKeeper before its session expires.

Related Name

zkClientTimeout

Default Value

15 second(s)

API Name

zookeeper_client_timeout

Required

true

Logs

Solr Server Logging Threshold

Description

The minimum log level for Solr Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Solr Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Solr Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Solr Server Max Log Size

Description

The maximum size, in megabytes, per log file for Solr Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Solr Server Log Directory

Description

Directory where Solr Server will place its log files.

Related Name

Default Value

/var/log/solr

API Name

solr_log_dir

Required

true

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Heap Dump Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

heap_dump_directory_free_space_absolute_thresholds

Required

false

Heap Dump Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's heap dump directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Heap Dump Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

heap_dump_directory_free_space_percentage_thresholds

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Navigator Audit Failure Thresholds

Description

The health test thresholds for failures encountered when monitoring audits within a recent period specified by the mgmt_navigator_failure_window configuration for the role. The value that can be specified for this threshold is the number of bytes of audits data that is left to be sent to audit server.

Related Name

mgmt.navigator.failure.thresholds

Default Value

Warning: Never, Critical: Any

API Name

mgmt_navigator_failure_thresholds

Required

false

Monitoring Period For Audit Failures

Description

The period to review when checking if audits are blocked and not getting processed.

Related Name

mgmt.navigator.failure.window

Default Value

20 minute(s)

API Name

mgmt_navigator_failure_window

Required

false

Navigator Audit Pipeline Health Check

Description

Enable test of audit events processing pipeline. This will test if audit events are not getting processed by Audit Server for a role that generates audit.

Related Name

mgmt.navigator.status.check.enabled

Default Value

true

API Name

mgmt_navigator_status_check_enabled

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

Solr Server API Liveness

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather status of Solr Cores from the Solr Server with a simple API request.

Related Name

Default Value

true

API Name

solr_core_status_collection_health_enabled

Required

false

Solr Server API Liveness Request Duration

Description

The health test thresholds on the duration of the Solr Server API request.

Related Name

Default Value

Warning: 10 second(s), Critical: Never

API Name

solr_core_status_collection_thresholds

Required

false

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

solr_server_fd_thresholds

Required

false

Garbage Collection Duration Thresholds

Description

The health test thresholds for the weighted average time spent in Java garbage collection. Specified as a percentage of elapsed wall clock time.

Related Name

Default Value

Warning: 30.0, Critical: 60.0

API Name

solr_server_gc_duration_thresholds

Required

false

Garbage Collection Duration Monitoring Period

Description

The period to review when computing the moving average of garbage collection time.

Related Name

Default Value

5 minute(s)

API Name

solr_server_gc_duration_window

Required

false

Solr Server Host Health Test

Description

When computing the overall Solr Server health, consider the host's health.

Related Name

Default Value

true

API Name

solr_server_host_health_enabled

Required

false

Solr Server Process Health Test

Description

Enables the health test that the Solr Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

solr_server_scm_health_enabled

Required

false

Web Metric Collection

Description

Enables the health test that the Cloudera Manager Agent can successfully contact and gather metrics from the web server.

Related Name

Default Value

true

API Name

solr_server_web_metric_collection_enabled

Required

false

Web Metric Collection Duration

Description

The health test thresholds on the duration of the metrics request to the web server.

Related Name

Default Value

Warning: 10 second(s), Critical: Never

API Name

solr_server_web_metric_collection_thresholds

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Solr Data Directory

Description

Directory on local file system where Solr Server keeps the configurations for collections.

Related Name

Default Value

/var/lib/solr

API Name

solr_data_dir

Required

true

Graceful Shutdown Timeout

Description

Timeout (in seconds) for graceful shutdown of this Solr server. Once this timeout is reached, Solr server is abruptly shutdown. A value of 0 means no timeout.

Related Name

Default Value

3 minute(s)

API Name

solr_graceful_stop_timeout

Required

false

Solr Load Balancer

Description

Address of the load balancer, specified in host:port format.

Related Name

Default Value

API Name

solr_load_balancer

Required

false

Solr Plugins Directory

Description

Directory on local file system where Solr Server can find additional JARs. This directory is not monitored for changes during the lifetime of a solr server, and a restart is required to read any updates to the directory contents.

Related Name

Default Value

API Name

solr_plugins_dir

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Solr Max Connector Threads

Description

The maximum number of request processing threads to be created by Solr server, which determines the maximum number of simultaneous requests that can be handled.

Related Name

Default Value

10000

API Name

solr_max_connector_thread

Required

true

Ports and Addresses

Solr Admin Port

Description

Admin port of the Solr Server.

Related Name

Default Value

8984

API Name

solr_admin_port

Required

true

Solr HTTP Port

Description

HTTP port of Solr Server.

Related Name

solr_http_port

Default Value

8983

API Name

solr_http_port

Required

true

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

HDFS Block Cache Blocks per Slab

Description

Number of blocks per cache slab. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

Related Name

solr.hdfs.blockcache.blocksperbank

Default Value

16384

API Name

solr_hdfs_blockcache_blocksperbank

Required

true

HDFS Block Cache Off-Heap Memory

Description

Use off-heap memory when caching HDFS blocks in Solr.

Related Name

solr.hdfs.blockcache.direct.memory.allocation

Default Value

true

API Name

solr_hdfs_blockcache_direct_memory_allocation

Required

true

HDFS Block Cache

Description

Enable caching of HDFS blocks in Solr. There is one block cache per Solr collection. configured to use off-heap memory, Maximum Off-Heap Memory must be set high enough to account for all block caches.

Related Name

solr.hdfs.blockcache.enabled

Default Value

true

API Name

solr_hdfs_blockcache_enabled

Required

true

HDFS Block Cache Number of Slabs

Description

Number of slabs per block cache. The size of the cache is 8 KB (the block size) times the number of blocks per slab times the number of slabs.

Related Name

solr.hdfs.blockcache.slab.count

Default Value

1

API Name

solr_hdfs_blockcache_slab_count

Required

true

Java Direct Memory Size of Solr Server in Bytes

Description

Maximum amount of off-heap memory in bytes that may be allocated by the Java process. Passed to Java -XX:MaxDirectMemorySize. If unset, defaults to the size of the heap.

Related Name

Default Value

1 GiB

API Name

solr_java_direct_memory_size

Required

false

Java Heap Size of Solr Server in Bytes

Description

Maximum size in bytes for the Java Process heap memory. Passed to Java -Xmx.

Related Name

Default Value

1 GiB

API Name

solr_java_heapsize

Required

false

Security

Solr HTTPS port

Description

HTTPS port of Solr Server.

Related Name

solr_https_port

Default Value

8985

API Name

solr_https_port

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Solr Server Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Solr Server Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

false

API Name

role_config_suppression_solr_server_role_env_safety_valve

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Health Test: Solr Server API Liveness

Description

Whether to suppress the results of the Solr Server API Liveness heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_core_status_collection_health

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_file_descriptor

Required

true

Suppress Health Test: GC Duration

Description

Whether to suppress the results of the GC Duration heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_gc_duration

Required

true

Suppress Health Test: Heap Dump Directory Free Space

Description

Whether to suppress the results of the Heap Dump Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_heap_dump_directory_free_space

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_unexpected_exits

Required

true

Suppress Health Test: Web Server Status

Description

Whether to suppress the results of the Web Server Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_solr_server_web_metric_collection

Required

true

Spark Properties in Cloudera Runtime 7.2.15

Role groups:

Gateway

Advanced

Deploy Directory

Description

The directory where the client configs will be deployed

Related Name

Default Value

/etc/spark

API Name

client_config_root_dir

Required

true

Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-defaults.conf.

Related Name

Default Value

API Name

spark-conf/spark-defaults.conf_client_config_safety_valve

Required

false

Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

For advanced use only, a string to be inserted into the client configuration for spark-conf/spark-env.sh.

Related Name

Default Value

API Name

spark-conf/spark-env.sh_client_config_safety_valve

Required

false

Logs

Gateway Logging Threshold

Description

The minimum log level for Gateway logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

51

API Name

client_config_priority

Required

true

Spark Data Serializer

Description

Name of class implementing org.apache.spark.serializer.Serializer to use in Spark applications.

Related Name

spark.serializer

Default Value

org.apache.spark.serializer.KryoSerializer

API Name

spark_data_serializer

Required

true

Default Application Deploy Mode

Description

Which deploy mode to use by default. Can be overridden by users when launching applications.

Related Name

spark_deploy_mode

Default Value

client

API Name

spark_deploy_mode

Required

false

Caching Executor Idle Timeout

Description

When dynamic allocation is enabled, time after which idle executors with cached RDDs blocks will be stopped. By default, they're never stopped.

Related Name

spark.dynamicAllocation.cachedExecutorIdleTimeout

Default Value

API Name

spark_dynamic_allocation_cached_idle_timeout

Required

false

Enable Dynamic Allocation

Description

Enable dynamic allocation of executors in Spark applications.

Related Name

spark.dynamicAllocation.enabled

Default Value

true

API Name

spark_dynamic_allocation_enabled

Required

false

Executor Idle Timeout

Description

When dynamic allocation is enabled, time after which idle executors will be stopped.

Related Name

spark.dynamicAllocation.executorIdleTimeout

Default Value

1 minute(s)

API Name

spark_dynamic_allocation_idle_timeout

Required

false

Initial Executor Count

Description

When dynamic allocation is enabled, number of executors to allocate when the application starts. By default, this is the same value as the minimum number of executors.

Related Name

spark.dynamicAllocation.initialExecutors

Default Value

API Name

spark_dynamic_allocation_initial_executors

Required

false

Maximum Executor Count

Description

When dynamic allocation is enabled, maximum number of executors to allocate. By default, Spark relies on YARN to control the maximum number of executors for the application.

Related Name

spark.dynamicAllocation.maxExecutors

Default Value

API Name

spark_dynamic_allocation_max_executors

Required

false

Minimum Executor Count

Description

When dynamic allocation is enabled, minimum number of executors to keep alive while the application is running.

Related Name

spark.dynamicAllocation.minExecutors

Default Value

0

API Name

spark_dynamic_allocation_min_executors

Required

false

Scheduler Backlog Timeout

Description

When dynamic allocation is enabled, timeout before requesting new executors when there are backlogged tasks.

Related Name

spark.dynamicAllocation.schedulerBacklogTimeout

Default Value

1 second(s)

API Name

spark_dynamic_allocation_scheduler_backlog_timeout

Required

false

Sustained Scheduler Backlog Timeout

Description

When dynamic allocation is enabled, timeout before requesting new executors after the initial backlog timeout has already expired. By default this is the same value as the initial backlog timeout.

Related Name

spark.dynamicAllocation.sustainedSchedulerBacklogTimeout

Default Value

API Name

spark_dynamic_allocation_sustained_scheduler_backlog_timeout

Required

false

Shell Logging Threshold

Description

The minimum log level for the Spark shell.

Related Name

spark_gateway_shell_logging_threshold

Default Value

WARN

API Name

spark_gateway_shell_logging_threshold

Required

true

Enable Kill From UI

Description

Whether to allow users to kill running stages from the Spark Web UI.

Related Name

spark.ui.killEnabled

Default Value

true

API Name

spark_gateway_ui_kill_enabled

Required

true

Enable History

Description

Write Spark application history logs to HDFS.

Related Name

spark.eventLog.enabled

Default Value

true

API Name

spark_history_enabled

Required

false

Enable I/O Encryption

Description

Whether to encrypt temporary shuffle and cache files stored by Spark on the local disks.

Related Name

spark.io.encryption.enabled

Default Value

false

API Name

spark_io_encryption_enabled

Required

false

Enable Spark Lineage

Description

Whether to enable spark lineage support. If enabled, spark lineage is sent to Atlas.

Related Name

spark.lineage.enabled

Default Value

true

API Name

spark_lineage_enabled

Required

false

Enable Network Encryption

Description

Whether to encrypt communication between Spark processes belonging to the same application. Requires authentication (spark.authenticate) to be enabled.

Related Name

spark.network.crypto.enabled

Default Value

false

API Name

spark_network_encryption_enabled

Required

false

Enable Optimized S3 Committers

Description

Whether use optimized committers when writing data to S3.

Related Name

spark.cloudera.s3_committers.enabled

Default Value

true

API Name

spark_optimized_s3_committers_enabled

Required

false

Extra Python Path

Description

Python library paths to add to PySpark applications.

Related Name

spark_python_path

Default Value

API Name

spark_python_path

Required

false

Enable Shuffle Service

Description

Enables the external shuffle service. The external shuffle service preserves shuffle files written by executors so that the executors can be deallocated without losing work. Must be enabled if Enable Dynamic Allocation is enabled. Recommended and enabled by default.

Related Name

spark.shuffle.service.enabled

Default Value

true

API Name

spark_shuffle_service_enabled

Required

true

Enable Spark Web UI

Description

Whether to enable the Spark Web UI on individual applications. It's recommended that the UI be disabled in secure clusters.

Related Name

spark.ui.enabled

Default Value

true

API Name

spark_ui_enabled

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Logging Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Logging Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log4j_safety_valve

Required

true

Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-defaults.conf parameter.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-defaults.conf_client_config_safety_valve

Required

true

Suppress Parameter Validation: Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Client Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh parameter.

Related Name

Default Value

false

API Name

role_config_suppression_spark-conf/spark-env.sh_client_config_safety_valve

Required

true

Suppress Parameter Validation: Spark Data Serializer

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Spark Data Serializer parameter.

Related Name

Default Value

false

API Name

role_config_suppression_spark_data_serializer

Required

true

Suppress Parameter Validation: Extra Python Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Extra Python Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_spark_python_path

Required

true

History Server

Advanced

History Server Logging Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a string to be inserted into log4j.properties for this role only.

Related Name

Default Value

API Name

log4j_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-env.sh

Description

For advanced use only. A string to be inserted into spark-conf/spark-env.sh for this role only.

Related Name

Default Value

API Name

spark-conf/spark-env.sh_role_safety_valve

Required

false

History Server Advanced Configuration Snippet (Safety Valve) for spark-conf/spark-history-server.conf

Description

For advanced use only. A string to be inserted into spark-conf/spark-history-server.conf for this role only.

Related Name

Default Value

API Name

spark-conf/spark-history-server.conf_role_safety_valve

Required

false

History Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

SPARK_YARN_HISTORY_SERVER_role_env_safety_valve

Required

false

Logs

History Server Log Directory

Description

The log directory for log files of the role History Server.

Related Name

log_dir

Default Value

/var/log/spark

API Name

log_dir

Required

false

History Server Logging Threshold

Description

The minimum log level for History Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

History Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for History Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

History Server Max Log Size

Description

The maximum size, in megabytes, per log file for History Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

spark_yarn_history_server_fd_thresholds

Required

false

History Server Host Health Test

Description

When computing the overall History Server health, consider the host's health.

Related Name

Default Value

true

API Name

spark_yarn_history_server_host_health_enabled

Required

false

History Server Process Health Test

Description

Enables the health test that the History Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

spark_yarn_history_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Use Local Storage

Description

Whether to use local storage for caching application history data, which reduces memory usage and makes service restarts faster.

Related Name

enable_local_storage

Default Value

false

API Name

enable_local_storage

Required

false

Enable Event Log Cleaner

Description

Specifies whether the History Server should periodically clean up event logs from storage.

Related Name

spark.history.fs.cleaner.enabled

Default Value

true

API Name

event_log_cleaner_enabled

Required

false

Event Log Cleaner Interval

Description

How often the History Server will clean up event log files.

Related Name

spark.history.fs.cleaner.interval

Default Value

1 day(s)

API Name

event_log_cleaner_interval

Required

false

Maximum Event Log Age

Description

Specifies the maximum age of the event logs.

Related Name

spark.history.fs.cleaner.maxAge

Default Value

7 day(s)

API Name

event_log_cleaner_max_age

Required

false

Admin Users

Description

Comma-separated list of users who can view all applications when authentication is enabled.

Related Name

spark.history.ui.admin.acls

Default Value

knox

API Name

history_server_admin_users

Required

false

HDFS Polling Interval

Description

How often to poll HDFS for new applications.

Related Name

spark.history.fs.update.interval.seconds

Default Value

10 second(s)

API Name

history_server_fs_poll_interval

Required

false

Java Heap Size of History Server in Bytes

Description

Maximum size for the Java process heap memory. Passed to Java -Xmx. Measured in bytes.

Related Name

history_server_max_heapsize

Default Value

512 MiB

API Name

history_server_max_heapsize

Required

true

Retained App Count

Description

Max number of application UIs to keep in the History Server's memory. All applications will still be available, but may take longer to load if they're not in memory.

Related Name

spark.history.retainedApplications

Default Value

50

API Name

history_server_retained_apps

Required

false

Enable User Authentication

Description

Enables user authentication using SPNEGO (requires Kerberos), and enables access control to application history data.

Related Name

history_server_spnego_enabled

Default Value

false

API Name

history_server_spnego_enabled

Required

false

Local Storage Directory

Description

Directory where to keep local caches of application history data.

Related Name

spark.history.store.path

Default Value

/var/lib/spark/history

API Name

local_storage_dir

Required

false

Max Local Storage Size

Description

Approximate maximum amount of data to use in local storage for caching application history data.

Related Name

spark.history.store.maxDiskUsage

Default Value

10 GiB

API Name

local_storage_max_usage

Required

false

Enabled SSL/TLS Algorithms

Description

A comma-separated list of algorithm names to enable when TLS/SSL is enabled. By default, all algorithms supported by the JRE are enabled.

Related Name

spark.ssl.historyServer.enabledAlgorithms

Default Value

API Name

ssl_server_algorithms

Required

false

TLS/SSL Protocol

Description

The version of the TLS/SSL protocol to use when TLS/SSL is enabled.

Related Name

spark.ssl.historyServer.protocol

Default Value

TLSv1.2

API Name

ssl_server_protocol

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Ports and Addresses

History Server WebUI Port

Description

The port of the history server WebUI

Related Name

spark.history.ui.port

Default Value

18088

API Name

history_server_web_port

Required

true

TLS/SSL Port Number

Description

Port where to listen for TLS/SSL connections. HTTP connections will be redirected to this port when TLS/SSL is enabled.

Related Name

spark.ssl.historyServer.port

Default Value

18488

API Name

ssl_server_port

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Enable TLS/SSL for History Server

Description

Encrypt communication between clients and History Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

spark.ssl.historyServer.enabled

Default Value

false

API Name

ssl_enabled

Required

false

History Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when History Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

spark.ssl.historyServer.keyStore

Default Value

API Name

ssl_server_keystore_location

Required

false

History Server TLS/SSL Server Keystore File Password

Description

The password for the History Server keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Admin Users

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Admin Users parameter.

Related Name

Default Value

false

API Name

role_config_suppression_history_server_admin_users

Required

true

Suppress Parameter Validation: History Server WebUI Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the History Server WebUI Port parameter.

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

sqoop-conf/sqoop-env.sh_client_config_safety_valve

Required

false

Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-site.xml

Description

For advanced use only. A string to be inserted into sqoop-site.xml for this role only.

Related Name

Default Value

API Name

sqoop-conf/sqoop-site.xml_client_config_safety_valve

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

90

API Name

client_config_priority

Required

true

Sqoop Connection Factories

Description

A list of ManagerFactory implementations which are consulted, in order to instantiate ConnManager instances used to drive connections to databases.

Related Name

sqoop.connection.factories

Default Value

API Name

sqoop_connection_factories

Required

false

Sqoop Tool Plugins

Description

A list of ToolPlugin implementations which are consulted, in order to register SqoopTool instances which allow third-party tools to be used.

Related Name

sqoop.tool.plugins

Default Value

API Name

sqoop_tool_plugins

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Deploy Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Deploy Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Parameter Validation: Gateway Advanced Configuration Snippet (Safety Valve) for cm_manager_overrides

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Advanced Configuration Snippet (Safety Valve) for cm_manager_overrides parameter.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop-conf/managers.d/cm_manager_overrides_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-env.sh

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-env.sh parameter.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop-conf/sqoop-env.sh_client_config_safety_valve

Required

true

Suppress Parameter Validation: Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-site.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-site.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop-conf/sqoop-site.xml_client_config_safety_valve

Required

true

Suppress Parameter Validation: Sqoop Connection Factories

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Connection Factories parameter.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop_connection_factories

Required

true

Suppress Parameter Validation: Sqoop Tool Plugins

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Sqoop Tool Plugins parameter.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop_tool_plugins

Required

true

Service-Wide

Advanced

SQOOP_CLIENT Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

SQOOP_CLIENT_service_env_safety_valve

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Parquet Writer Implementation

Description

Configure the library used during parquet jobs for writing and reading data. Possible values: hadoop, kite (legacy).

Related Name

parquetjob.configurator.implementation

Default Value

hadoop

API Name

parquetjob.configurator.implementation

Required

false

Sqoop Decimal Padding

Description

Enables padding for fixed point number types (decimal, number, numeric) in case of Avro and Parquet imports.

Related Name

sqoop.avro.decimal_padding.enable

Default Value

true

API Name

sqoop.avro.decimal_padding.enable

Required

false

Default Precision for Logical Types

Description

Specifies the default precision for fixed point number types. This value is only used if the precision was not specified in the source table.

Related Name

sqoop.avro.logical_types.decimal.default.precision

Default Value

38

API Name

sqoop.avro.logical_types.decimal.default.precision

Required

false

Default Scale for Logical Types

Description

Default scale for fixed point number types. This value is only used if the scale was not specified in the source table.

Related Name

sqoop.avro.logical_types.decimal.default.scale

Default Value

10

API Name

sqoop.avro.logical_types.decimal.default.scale

Required

false

Enable Avro Logical Types

Description

Enables the use of logical types in avro files, so that fixed point number types are converted to decimal during an import. Fixed point number types are converted to String if this property is set to false.

Related Name

sqoop.avro.logical_types.decimal.enable

Default Value

true

API Name

sqoop.avro.logical_types.decimal.enable

Required

false

Enable Parquet Logical Types

Description

Enables the use of logical types in parquet files, so that fixed point number types are converted to decimal during an import. Fixed point number types are converted to String if this property is set to false.

Related Name

sqoop.parquet.logical_types.decimal.enable

Default Value

true

API Name

sqoop.parquet.logical_types.decimal.enable

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Configuration Validator: Deploy Directory

Description

Whether to suppress configuration warnings produced by the Deploy Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_client_config_root_dir

Required

true

Suppress Configuration Validator: Gateway Advanced Configuration Snippet (Safety Valve) for cm_manager_overrides

Description

Whether to suppress configuration warnings produced by the Gateway Advanced Configuration Snippet (Safety Valve) for cm_manager_overrides configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop-conf/managers.d/cm_manager_overrides_client_config_safety_valve

Required

true

Suppress Configuration Validator: Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-env.sh

Description

Whether to suppress configuration warnings produced by the Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-env.sh configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop-conf/sqoop-env.sh_client_config_safety_valve

Required

true

Suppress Configuration Validator: Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-site.xml

Description

Whether to suppress configuration warnings produced by the Gateway Advanced Configuration Snippet (Safety Valve) for sqoop-site.xml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop-conf/sqoop-site.xml_client_config_safety_valve

Required

true

Suppress Configuration Validator: Sqoop Connection Factories

Description

Whether to suppress configuration warnings produced by the Sqoop Connection Factories configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop_connection_factories

Required

true

Suppress Configuration Validator: Sqoop Tool Plugins

Description

Whether to suppress configuration warnings produced by the Sqoop Tool Plugins configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_sqoop_tool_plugins

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Parquet Writer Implementation

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Parquet Writer Implementation parameter.

Related Name

Default Value

false

API Name

service_config_suppression_parquetjob.configurator.implementation

Required

true

Suppress Parameter Validation: SQOOP_CLIENT Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SQOOP_CLIENT Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_sqoop_client_service_env_safety_valve

Required

true

Streams Messaging Manager Properties in Cloudera Runtime 7.2.15

Role groups:

Service-Wide

Advanced

Streams Messaging Manager Database JDBC Url Override

Description

Specify JDBC url override for connecting to Streams Messaging Manager database. If not specified, the JDBC url will be calculated on basis of the Streams Messaging Manager database parameters specified.

Related Name

database_jdbc_url_override

Default Value

API Name

database_jdbc_url_override

Required

false

System Group

Description

The group that this service's processes should run as.

Related Name

Default Value

streamsmsgmgr

API Name

process_groupname

Required

true

System User

Description

The user that this service's processes should run as.

Related Name

Default Value

streamsmsgmgr

API Name

process_username

Required

true

Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of all roles in this service except client configuration.

Related Name

Default Value

API Name

STREAMS_MESSAGING_MANAGER_service_env_safety_valve

Required

false

Database

Streams Messaging Manager Database Host

Description

Hostname of the database used by Streams Messaging Manager. If the port is non-default for your database type, use host:port notation.

Related Name

streams.messaging.manager.storage.connector.host

Default Value

localhost

API Name

smm_database_host

Required

true

Streams Messaging Manager Database Name

Description

Name of Streams Messaging Manager database.

Related Name

streams.messaging.manager.storage.connector.name

Default Value

streamsmsgmgr

API Name

smm_database_name

Required

true

Streams Messaging Manager Database User Password

Description

Password for Streams Messaging Manager database.

Related Name

streams.messaging.manager.storage.connector.password

Default Value

API Name

smm_database_password

Required

true

Streams Messaging Manager Database Port

Description

Port for Streams Messaging Manager database.

Related Name

streams.messaging.manager.storage.connector.port

Default Value

3306

API Name

smm_database_port

Required

true

Streams Messaging Manager Database Type

Description

Database type to be used (postgres).

Related Name

streams.messaging.manager.storage.connector.type

Default Value

mysql

API Name

smm_database_type

Required

true

Streams Messaging Manager Database User

Description

User for Streams Messaging Manager database.

Related Name

streams.messaging.manager.storage.connector.user

Default Value

streamsmsgmgr

API Name

smm_database_user

Required

true

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Streams Messaging Manager UI Server Role Health Test

Description

When computing the overall STREAMS_MESSAGING_MANAGER health, consider Streams Messaging Manager UI Server's health

Related Name

Default Value

true

API Name

STREAMS_MESSAGING_MANAGER_STREAMS_MESSAGING_MANAGER_UI_health_enabled

Required

false

Other

Enable Kerberos Authentication with Trusted Proxy

Description

Enables knox as Trusted proxy with Kerberos authentication for this SMM service.

Related Name

enable.trusted.proxy

Default Value

true

API Name

enable.trusted.proxy

Required

false

Kafka Service

Description

Name of the Kafka service that this Streams Messaging Manager service instance depends on

Related Name

Default Value

API Name

kafka_service

Required

true

Enable Kerberos Authentication

Description

Enables Kerberos authentication for this Streams Messaging Manager.

Related Name

kerberos.auth.enable

Default Value

false

API Name

kerberos.auth.enable

Required

false

Ranger Plugin Trusted Proxy IP Address

Description

Accepts a list of IP addresses of proxy servers for trusting.

Related Name

ranger.plugin.kafka.trusted.proxy.ipaddress

Default Value

API Name

ranger_plugin_trusted_proxy_ipaddress

Required

false

Ranger Plugin Use X-Forwarded For IP Address

Description

The parameter is used for identifying the originating IP address of a user connecting to a component through proxy for audit logs.

Related Name

ranger.plugin.kafka.use.x-forwarded-for.ipaddress

Default Value

false

API Name

ranger_plugin_use_x_forwarded_for_ipaddress

Required

false

Ranger Service

Description

Name of the Ranger service that this Streams Messaging Manager service instance depends on

Related Name

Default Value

API Name

ranger_service

Required

Ranger SMM Plugin Conf Path

Description

Staging directory for Ranger SMM Plugin Configuration. This should generally not be changed.

Related Name

ranger_smm_plugin_conf_path

Default Value

$CONF_DIR/smm-plugin

API Name

ranger_smm_plugin_conf_path

Required

true

Ranger Streams Messaging Manager Plugin Audit Hdfs Spool Directory Path

Description

Spool directory for Ranger audits being written to DFS.

Related Name

xasecure.audit.destination.hdfs.batch.filespool.dir

Default Value

/var/log/streams-messaging-manager/audit/hdfs/spool

API Name

ranger_smm_plugin_hdfs_audit_spool_directory

Required

true

Ranger Streams Messaging Manager Plugin Policy Cache Directory Path

Description

The directory where Ranger security policies are cached locally.

Related Name

ranger.plugin.smm.policy.cache.dir

Default Value

/var/lib/ranger/kafka/policy-cache

API Name

ranger_smm_plugin_policy_cache_directory

Required

true

Ranger Streams Messaging Manager Plugin Audit Solr Spool Directory Path

Description

Spool directory for Ranger audits being written to Solr.

Related Name

xasecure.audit.destination.solr.batch.filespool.dir

Default Value

/var/log/streams-messaging-manager/audit/solr/spool

API Name

ranger_smm_plugin_solr_audit_spool_directory

Required

true

Schema Registry Service

Description

Name of the Schema Registry service that this Streams Messaging Manager service instance depends on

Related Name

Default Value

API Name

schemaregistry_service

Required

false

Streams Messaging Manager Port

Description

The port on which server accepts connections.

Related Name

streams.messaging.manager.port

Default Value

8585

API Name

streams.messaging.manager.port

Required

true

Streams Messaging Manager port (SSL)

Description

HTTPS port Streams Messaging Manager rest server runs on when SSL is enabled.

Related Name

streams.messaging.manager.ssl.port

Default Value

8587

API Name

streams.messaging.manager.ssl.port

Required

false

STREAMS_REPLICATION_MANAGER Service

Description

Name of the STREAMS_REPLICATION_MANAGER service that this Streams Messaging Manager service instance depends on

Related Name

Default Value

API Name

streams_replication_manager_service

Required

false

ZooKeeper Service

Description

Name of the ZooKeeper service that this Streams Messaging Manager service instance depends on

Related Name

Suppress Configuration Validator: Inactive Group Timeout

Description

Whether to suppress configuration warnings produced by the Inactive Group Timeout configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.group.timeout.ms

Required

true

Suppress Configuration Validator: inactive.producer.timeout.ms

Description

Whether to suppress configuration warnings produced by the inactive.producer.timeout.ms configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.producer.timeout.ms

Required

true

Suppress Configuration Validator: Kafka Connect Host

Description

Whether to suppress configuration warnings produced by the Kafka Connect Host configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.host

Required

true

Suppress Configuration Validator: Kafka Connect Plugin Sample Configuration Path

Description

Whether to suppress configuration warnings produced by the Kafka Connect Plugin Sample Configuration Path configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.plugin.sample.configs.path

Required

true

Suppress Configuration Validator: Kafka Connect Port

Description

Whether to suppress configuration warnings produced by the Kafka Connect Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.port

Required

true

Suppress Configuration Validator: LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Whether to suppress configuration warnings produced by the LatencyMetricsConfig Metrics 15m Ttl Secs configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.15m.ttl.secs

Required

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Location configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_privatekey_location

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server TLS/SSL Private Key Password

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server TLS/SSL Private Key Password configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_privatekey_password

Required

true

Suppress Configuration Validator: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the Stacks Collection Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams-messaging-manager.yaml_role_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager Admin Port

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Admin Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.adminport

Required

true

Suppress Configuration Validator: Allow All Alert Notifications

Description

Whether to suppress configuration warnings produced by the Allow All Alert Notifications configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.allow.all.alert.notifications

Required

true

Suppress Configuration Validator: Allowed resources

Description

Whether to suppress configuration warnings produced by the Allowed resources configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.allowed.resources

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStore

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStore configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.keystore

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStorePassword

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStorePassword configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.keystorepassword

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.keyStoreType

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.keyStoreType configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.keystoretype

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStore

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStore configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.truststore

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStorePassword

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStorePassword configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.truststorepassword

Required

true

Suppress Configuration Validator: Oracle TLS javax.net.ssl.trustStoreType

Description

Whether to suppress configuration warnings produced by the Oracle TLS javax.net.ssl.trustStoreType configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.javax.net.ssl.truststoretype

Required

true

Suppress Configuration Validator: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the Java Home Path Override configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.jdk.home

Required

true

Suppress Configuration Validator: Kafka Alert Notification Topic

Description

Whether to suppress configuration warnings produced by the Kafka Alert Notification Topic configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Suppress Configuration Validator: Kafka Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the Kafka Cache Refresh Interval ms configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

true

Suppress Configuration Validator: Kerberos Name Rules

Description

Whether to suppress configuration warnings produced by the Kerberos Name Rules configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.name.rules

Required

true

Suppress Configuration Validator: Kerberos Non Browser User Agents

Description

Whether to suppress configuration warnings produced by the Kerberos Non Browser User Agents configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.non.browser.user.agents

Required

true

Suppress Configuration Validator: Oracle TLS oracle.net.authentication_services

Description

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.authentication_services configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.authentication_services

Required

true

Suppress Configuration Validator: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the Oracle TLS oracle.net.ssl_cipher_suites configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_cipher_suites

Required

true

Suppress Configuration Validator: oracle.net.ssl_version

Description

Whether to suppress configuration warnings produced by the oracle.net.ssl_version configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_version

Required

true

Suppress Configuration Validator: Streams Messaging Manager NotifierProviders Config Classes

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager NotifierProviders Config Classes configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.providerclasses

Required

true

Suppress Configuration Validator: Save Notification Read Status Per User

Description

Whether to suppress configuration warnings produced by the Save Notification Read Status Per User configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user

Required

true

Suppress Configuration Validator: Servlet filter

Description

Whether to suppress configuration warnings produced by the Servlet filter configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.servlet.filter

Required

true

Suppress Configuration Validator: Streams Messaging Manager Admin Port (SSL)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Admin Port (SSL) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.adminport

Required

true

Suppress Configuration Validator: SSL Keystore Type

Description

Whether to suppress configuration warnings produced by the SSL Keystore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.keystoretype

Required

true

Suppress Configuration Validator: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the SSL TrustStore Type configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.truststoretype

Required

true

Suppress Configuration Validator: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the SSL ValidateCerts configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatecerts

Required

true

Suppress Configuration Validator: SSL validatePeers

Description

Whether to suppress configuration warnings produced by the SSL validatePeers configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatepeers

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Port

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Port configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ui.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Configuration Directory

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Configuration Directory configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.working.directory

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams_messaging_manager_server_role_env_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams_messaging_manager_ui_role_env_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database JDBC Url Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database JDBC Url Override parameter.

Related Name

Default Value

false

API Name

service_config_suppression_database_jdbc_url_override

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Ranger Plugin Trusted Proxy IP Address

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Plugin Trusted Proxy IP Address parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_plugin_trusted_proxy_ipaddress

Required

true

Suppress Parameter Validation: Ranger SMM Plugin Conf Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger SMM Plugin Conf Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_smm_plugin_conf_path

Required

true

Suppress Parameter Validation: Ranger Streams Messaging Manager Plugin Audit Hdfs Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Streams Messaging Manager Plugin Audit Hdfs Spool Directory Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_smm_plugin_hdfs_audit_spool_directory

Required

Suppress Parameter Validation: Ranger Streams Messaging Manager Plugin Policy Cache Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Streams Messaging Manager Plugin Policy Cache Directory Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_smm_plugin_policy_cache_directory

Required

true

Suppress Parameter Validation: Ranger Streams Messaging Manager Plugin Audit Solr Spool Directory Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Ranger Streams Messaging Manager Plugin Audit Solr Spool Directory Path parameter.

Related Name

Default Value

false

API Name

service_config_suppression_ranger_smm_plugin_solr_audit_spool_directory

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Host parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smm_database_host

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database Name

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Name parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smm_database_name

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database User Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User Password parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smm_database_password

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smm_database_port

Required

true

Suppress Parameter Validation: Streams Messaging Manager Database User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Database User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smm_database_user

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Port parameter.

Related Name

Default Value

false

API Name

service_config_suppression_streams.messaging.manager.port

Required

true

Suppress Parameter Validation: Streams Messaging Manager port (SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager port (SSL) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_streams.messaging.manager.ssl.port

Required

true

Suppress Configuration Validator: Streams Messaging Manager Rest Admin Server Count Validator

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager Rest Admin Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_streams_messaging_manager_server_count_validator

Required

true

Suppress Parameter Validation: Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_streams_messaging_manager_service_env_safety_valve

Required

true

Suppress Configuration Validator: Streams Messaging Manager UI Server Count Validator

Description

Whether to suppress configuration warnings produced by the Streams Messaging Manager UI Server Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_streams_messaging_manager_ui_count_validator

Required

true

Suppress Health Test: Streams Messaging Manager Rest Admin Server Health

Description

Whether to suppress the results of the Streams Messaging Manager Rest Admin Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_streams_messaging_manager_streams_messaging_manager_streams_messaging_manager_server_health

Required

true

Suppress Health Test: Streams Messaging Manager UI Server Health

Description

Whether to suppress the results of the Streams Messaging Manager UI Server Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_streams_messaging_manager_streams_messaging_manager_streams_messaging_manager_ui_health

Required

true

Streams Messaging Manager Rest Admin Server

Advanced

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh

Description

For advanced use only. A string to be inserted into env.sh for this role only.

Related Name

Default Value

API Name

env.sh_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for Streams Messaging Manager Rest Admin Server, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value

API Name

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

For advanced use only. A string to be inserted into ranger-kafka-audit.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-audit.xml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

For advanced use only. A string to be inserted into ranger-kafka-policymgr-ssl.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

Description

For advanced use only. A string to be inserted into ranger-kafka-security.xml for this role only.

Related Name

Default Value

API Name

ranger-kafka-security.xml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for schema-registry-client-ssl-config.yaml

Description

For advanced use only. A string to be inserted into schema-registry-client-ssl-config.yaml for this role only.

Related Name

Default Value

API Name

schema-registry-client-ssl-config.yaml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-config.yaml

Description

For advanced use only. A string to be inserted into srm-client-config.yaml for this role only.

Related Name

Default Value

API Name

srm-client-config.yaml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for srm-client-ssl-config.yaml

Description

For advanced use only. A string to be inserted into srm-client-ssl-config.yaml for this role only.

Related Name

Default Value

API Name

srm-client-ssl-config.yaml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for streams-messaging-manager.yaml

Description

For advanced use only. A string to be inserted into streams-messaging-manager.yaml for this role only.

Related Name

Default Value

API Name

streams-messaging-manager.yaml_role_safety_valve

Required

false

Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_MESSAGING_MANAGER_SERVER_role_env_safety_valve

Required

false

Logs

Streams Messaging Manager Rest Admin Server Log Directory

Description

The log directory for log files of the role Streams Messaging Manager Rest Admin Server.

Related Name

log_dir

Default Value

/var/log/streams-messaging-manager

API Name

log_dir

Required

false

Streams Messaging Manager Rest Admin Server Logging Threshold

Description

The minimum log level for Streams Messaging Manager Rest Admin Server logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

Streams Messaging Manager Rest Admin Server Maximum Log File Backups

Description

The maximum number of rolled log files to keep for Streams Messaging Manager Rest Admin Server logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

Streams Messaging Manager Rest Admin Server Max Log Size

Description

The maximum size, in megabytes, per log file for Streams Messaging Manager Rest Admin Server logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.

- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_messaging_manager_server_fd_thresholds

Required

false

Streams Messaging Manager Rest Admin Server Host Health Test

Description

When computing the overall Streams Messaging Manager Rest Admin Server health, consider the host's health.

Related Name

Default Value

true

API Name

streams_messaging_manager_server_host_health_enabled

Required

false

Streams Messaging Manager Rest Admin Server Process Health Test

Description

Enables the health test that the Streams Messaging Manager Rest Admin Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

streams_messaging_manager_server_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Cloudera Manager Service Monitor Host

Description

Host of Cloudera Manager's Service Monitor, required when the Cloudera Manager Server and Service Monitor are not on the same host.

Related Name

cm.metrics.service.monitor.host

Default Value

API Name

cm.metrics.service.monitor.host

Required

false

Cloudera Manager Service Monitor Port

Description

Port of Cloudera Manager's Service Monitor.

Related Name

cm.metrics.service.monitor.port

Default Value

9997

API Name

cm.metrics.service.monitor.port

Required

true

Cloudera Manager Metrics TrustStore Type

Description

Cloudera Manager's truststore type. If it is left empty then the keystore type will come from CM settings. If it is left empty then the keystore type will come from CM settings.

Related Name

cm.metrics.truststore.type

Default Value

API Name

cm.metrics.truststore.type

Required

false

consumer.group.refresh.interval.ms

Description

Refresh interval for consumer group's consumption.

Related Name

consumer.group.refresh.interval.ms

Default Value

60000

API Name

consumer.group.refresh.interval.ms

Required

true

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

30 second(s)

API Name

graceful_stop_timeout

Required

false

Inactive Group Timeout

Description

Timeout in ms for inactive group.

Related Name

inactive.group.timeout.ms

Default Value

1800000

API Name

inactive.group.timeout.ms

Required

true

inactive.producer.timeout.ms

Description

Timeout in ms for Inactive producer.

Related Name

inactive.producer.timeout.ms

Default Value

1800000

API Name

inactive.producer.timeout.ms

Required

true

Kafka Connect Host

Description

Kafka Connect Rest Host

Related Name

kafka.connect.host

Default Value

API Name

kafka.connect.host

Required

false

Kafka Connect Plugin Sample Configuration Path

Description

Path to the directory containing Kafka Connector Plugins' sample json config files

Related Name

kafka.connect.plugin.sample.configs.path

Default Value

/etc/kafka_connect_ext/sample-configs

API Name

kafka.connect.plugin.sample.configs.path

Required

false

Kafka Connect Port

Description

Kafka Connect Rest Port

Related Name

kafka.connect.port

Default Value

28083

API Name

kafka.connect.port

Required

false

Kafka Connect Protocol

Description

Kafka Connect Rest Protocol

Related Name

kafka.connect.protocol

Default Value

http

API Name

kafka.connect.protocol

Required

false

Enable Latency Metrics Processing

Description

To enable Latency Metrics Processing and Servicing. SMM will launch a service which continuously processes metrics received from producers and consumers and be able to provide responses to queries.

Related Name

latencyMetricsConfig.enable.latency.metrics.processing

Default Value

true

API Name

latencyMetricsConfig.enable.latency.metrics.processing

Required

true

LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Determines the default TTL (Time To Live) for 15m granularity metrics (metrics are queryable in 15m).

Related Name

latencyMetricsConfig.metrics.15m.ttl.secs

Default Value

1209600

API Name

latencyMetricsConfig.metrics.15m.ttl.secs

Required

false

LatencyMetricsConfig Metrics Clean Frequency ms

Description

Frequency with which the metrics are cleaned from the above store in ms.

Related Name

latencyMetricsConfig.metrics.clean.frequency.ms

Default Value

21600000

API Name

latencyMetricsConfig.metrics.clean.frequency.ms

Required

false

Latency Metrics Data Storage Path

Description

Path to store latency metrics data.

Related Name

latencyMetricsConfig.metrics.storage

Default Value

/var/lib/streams_messaging_manager/latencymetrics/data

API Name

latencyMetricsConfig.metrics.storage

Required

false

Logger org.apache.kafka Logging Level

Description

Logger org.apache.kafka logging level.

Related Name

logging.org.apache.kafka.level

Default Value

INFO

API Name

logging.org.apache.kafka.level

Required

false

Logger smm.kafka.webservice.common Logging Level

Description

Logger smm.kafka.webservice.common logging level.

Related Name

logging.smm.kafka.webservice.common.level

Default Value

DEBUG

API Name

logging.smm.kafka.webservice.common.level

Required

false

Metrics Cache Refresh Interval ms

Description

Refresh interval for data collection from CM Metrics's Collector cache.

Related Name

metrics.cache.refresh.interval.ms

Default Value

50000

API Name

metrics.cache.refresh.interval.ms

Required

true

Metrics Fetcher Class

Description

SMM's kafka metrics fetcher class.

Related Name

metrics.fetcher.class

Default Value

com.hortonworks.smm.kafka.services.metric.cm.CMMetricsFetcher

API Name

metrics.fetcher.class

Required

true

Number of Metrics Fetcher Threads

Description

Number of metrics fetcher threads.

Related Name

metrics.fetcher.threads

Default Value

25

API Name

metrics.fetcher.threads

Required

true

Request Metrics Separately From Cloudera Manager

Description

When checked, SMM is fetching each metrics one by one from Cloudera Manager Timeseries API. By default it is grouping metrics by their attributes so API is called less times.

Related Name

request.metrics.separately

Default Value

false

API Name

request.metrics.separately

Required

false

Java Heap Size of SMM

Description

Maximum size for the SMM Java process heap memory. Passed to Java -Xmx. Measured in megabytes.

Related Name

SMM_HEAP_SIZE

Default Value

6 GiB

API Name

SMM_HEAP_SIZE

Required

false

SMM_JMX_OPTS

Description

Change parameters to setup jmxremote.

Related Name

SMM_JMX_OPTS

Default Value

-Dcom.sun.management.jmxremote -Dcom.sun.management.jmxremote.authenticate=false -Dcom.sun.management.jmxremote.ssl=false

API Name

SMM_JMX_OPTS

Required

false

SMM_JVM_PERF_OPTS

Description

SMM JVM perf and gc opts.

Related Name

SMM_JVM_PERF_OPTS

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true

API Name

SMM_JVM_PERF_OPTS

Required

false

Streams Messaging Manager Admin Port

Description

The admin port for the server.

Related Name

streams.messaging.manager.adminPort

Default Value

8586

API Name

streams.messaging.manager.adminPort

Required

true

AlertTopicConsumerConfig Poll Timeout ms

Description

Alert topic Consumer config poll timeout in ms.

Related Name

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

Default Value

1 second(s)

API Name

streams.messaging.manager.alertTopicConsumerConfig.poll.timeout.ms

Required

false

Allow All Alert Notifications

Description

Whether to send the alert notifications periodically.

Related Name

streams.messaging.manager.allow.all.alert.notifications

Default Value

true

API Name

streams.messaging.manager.allow.all.alert.notifications

Required

false

Allowed resources

Description

Allowed resources for Streams Messaging Manager.

Related Name

streams.messaging.manager.allowed.resources

Default Value

401.html, back-default.png, favicon.ico

API Name

streams.messaging.manager.allowed.resources

Required

false

Authorization Cache Concurrency Level

Description

The number of threads that can update the authorization cache in parallel.

Related Name

streams.messaging.manager.auth.cache.concurrency.level

Default Value

4

API Name

streams.messaging.manager.auth.cache.concurrency.level

Required

false

Authorization Cache Expiration Time

Description

The expiration time for entries in the authorization cache.

Related Name

streams.messaging.manager.auth.cache.expiration.ms

Default Value

30 second(s)

API Name

streams.messaging.manager.auth.cache.expiration.ms

Required

false

Authorization Cache Maximum Number Of Cached Items

Description

Authorization cache maximum number of cached items. Setting it to zero disables the cache.

Related Name

streams.messaging.manager.auth.cache.maximum.size

Default Value

10000

API Name

streams.messaging.manager.auth.cache.maximum.size

Required

false

Enable TLS with Oracle DB

Description

Enable TLS with Oracle as DB for Schema Registry.

Related Name

streams.messaging.manager.enable.TLS.Oracle

Default Value

false

API Name

streams.messaging.manager.enable.TLS.Oracle

Required

false

Streams Messaging Manager Executor Thread Count

Description

Alerts config executor thread count.

Related Name

streams.messaging.manager.executor.thread.count

Default Value

30

API Name

streams.messaging.manager.executor.thread.count

Required

true

Streams Messaging Manager Executor Thread Pool Size

Description

NotifierProviders executor thread pool size.

Related Name

streams.messaging.manager.executor.thread.pool.size

Default Value

16

API Name

streams.messaging.manager.executor.thread.pool.size

Required

true

Oracle TLS javax.net.ssl.keyStore

Description

Path to keystore file if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.keyStore

Default Value

API Name

streams.messaging.manager.javax.net.ssl.keyStore

Required

false

Oracle TLS javax.net.ssl.keyStorePassword

Description

KeyStorePassword if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.keyStorePassword

Default Value

API Name

streams.messaging.manager.javax.net.ssl.keyStorePassword

Required

false

Oracle TLS javax.net.ssl.keyStoreType

Description

keyStoreType type if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.keyStoreType

Default Value

API Name

streams.messaging.manager.javax.net.ssl.keyStoreType

Required

false

Oracle TLS javax.net.ssl.trustStore

Description

Required Path to truststore file if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.trustStore

Default Value

API Name

streams.messaging.manager.javax.net.ssl.trustStore

Required

false

Oracle TLS javax.net.ssl.trustStorePassword

Description

TrustStorePassword type if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.trustStorePassword

Default Value

API Name

streams.messaging.manager.javax.net.ssl.trustStorePassword

Required

false

Oracle TLS javax.net.ssl.trustStoreType

Description

Required Truststore type if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.javax.net.ssl.trustStoreType

Default Value

API Name

streams.messaging.manager.javax.net.ssl.trustStoreType

Required

false

Java Home Path Override

Description

Java Home Path Override for Streams Messaging Manager

Related Name

streams.messaging.manager.jdk.home

Default Value

API Name

streams.messaging.manager.jdk.home

Required

false

Kafka Alert Notification Topic

Description

Kafka alert notification topic name.

Related Name

streams.messaging.manager.kafka.alert.notifications.topic

Default Value

__smm_alert_notifications

API Name

streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Kafka Cache Refresh Interval ms

Description

SMM's cache refresh interval in ms for kafka.

Related Name

streams.messaging.manager.kafka.cache.refresh.interval.ms

Default Value

60000

API Name

streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

false

Streams Messaging Manager KafkaConsumerClient Poll Timeout ms

Description

SMM's Kafka Consumer Client poll timeout in ms.

Related Name

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

Default Value

1 second(s)

API Name

streams.messaging.manager.kafkaConsumerClient.poll.timeout.ms

Required

false

Kerberos Name Rules

Description

Kerberos name rules for Streams Messaging Manager.

Related Name

streams.messaging.manager.kerberos.name.rules

Default Value

RULE:[2:$1@$0]([jt]t@.*EXAMPLE.COM)s/.*/$MAPRED_USER/ RULE:[2:$1@$0]([nd]n@.*EXAMPLE.COM)s/.*/$HDFS_USER/DEFAULT

API Name

streams.messaging.manager.kerberos.name.rules

Required

false

Kerberos Non Browser User Agents

Description

Non browser user agents if kerberos is enabled.

Related Name

streams.messaging.manager.kerberos.non.browser.user.agents

Default Value

API Name

streams.messaging.manager.kerberos.non.browser.user.agents

Required

false

Oracle TLS oracle.net.authentication_services

Description

oracle net authentication service if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.oracle.net.authentication_services

Default Value

API Name

streams.messaging.manager.oracle.net.authentication_services

Required

false

Oracle TLS oracle.net.ssl_cipher_suites

Description

net ssl cipher suites if enabling TLS using Oracle DB e.g. SSL_DH_DSS_WITH_DES_CBC_SHA.

Related Name

streams.messaging.manager.oracle.net.ssl_cipher_suites

Default Value

API Name

streams.messaging.manager.oracle.net.ssl_cipher_suites

Required

false

Oracle TLS oracle.net.ssl_server_dn_match

Description

ssl server domain name match if enabling TLS using Oracle DB.

Related Name

streams.messaging.manager.oracle.net.ssl_server_dn_match

Default Value

true

API Name

streams.messaging.manager.oracle.net.ssl_server_dn_match

Required

false

oracle.net.ssl_version

Description

oracle net ssl version.

Related Name

streams.messaging.manager.oracle.net.ssl_version

Default Value

API Name

streams.messaging.manager.oracle.net.ssl_version

Required

false

Streams Messaging Manager NotifierProviders Config Classes

Description

NotifierProviders config classes in list format.

Related Name

streams.messaging.manager.providerClasses

Default Value

[com.hortonworks.smm.notifier.http.HttpNotifierProvider,
com.hortonworks.smm.notifier.email.EmailNotifierProvider]

API Name

streams.messaging.manager.providerClasses

Required

true

Save Notification Read Status Per User

Description

Alert notification save status flag per user.

Related Name

streams.messaging.manager.save.notification.read.status.per.user

Default Value

true

API Name

streams.messaging.manager.save.notification.read.status.per.user

Required

false

Servlet filter

Description

Streams Messaging Manager servlet filter class.

Related Name

streams.messaging.manager.servlet.filter

Default Value

com.hortonworks.registries.auth.server.AuthenticationFilter

API Name

streams.messaging.manager.servlet.filter

Required

true

Streams Messaging Manager Admin Port (SSL)

Description

HTTPS admin port Streams Messaging Manager rest server runs on when SSL is enabled.

Related Name

streams.messaging.manager.ssl.adminPort

Default Value

8588

API Name

streams.messaging.manager.ssl.adminPort

Required

false

SSL Keystore Type

Description

The keystore type. Required if Streams Messaging Manager rest server's SSL is enabled. e.g. PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.messaging.manager.ssl.keyStoreType

Default Value

API Name

streams.messaging.manager.ssl.keyStoreType

Required

false

SSL TrustStore Type

Description

The truststore type. Required if streams messaging manager's ssl is enabled. e.g. PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.messaging.manager.ssl.trustStoreType

Default Value

API Name

streams.messaging.manager.ssl.trustStoreType

Required

false

SSL ValidateCerts

Description

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method (CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java system properties. E.g: -Ddw.server.applicationConnectors[0].enableCRLDP=true (more details at https://www.dropwizard.io/en/latest/manual/core.html)

Related Name

streams.messaging.manager.ssl.validateCerts

Default Value

false

API Name

streams.messaging.manager.ssl.validateCerts

Required

false

SSL validatePeers

Description

Whether or not to validate TLS peer certificates.

Related Name

streams.messaging.manager.ssl.validatePeers

Default Value

false

API Name

streams.messaging.manager.ssl.validatePeers

Required

false

Streams Messaging Manager Query Timeout

Description

Streams Messaging Manager query timeout.

Related Name

streams.messaging.manager.storage.query.timeout

Default Value

30 millisecond(s)

API Name

streams.messaging.manager.storage.query.timeout

Required

true

Token validity

Description

Kerberos token validity for Streams Messaging Manager in ms.

Related Name

streams.messaging.manager.token.validity

Default Value

36000

API Name

streams.messaging.manager.token.validity

Required

false

Streams Messaging Manager Configuration Directory

Description

Directory to Streams messaging manager additional libs, jars, isos, etc.

Related Name

streams.messaging.manager.working.directory

Default Value

/var/lib/streams_messaging_manager

API Name

streams.messaging.manager.working.directory

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager Rest Admin Server might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

streams.messaging.manager.ssl.trustStorePath

Default Value

API Name

ssl_client_truststore_location

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store Password

Description

The password for the Streams Messaging Manager Rest Admin Server TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for Streams Messaging Manager Rest Admin Server

Description

Encrypt communication between clients and Streams Messaging Manager Rest Admin Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server.

Related Name

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when Streams Messaging Manager Rest Admin Server is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

streams.messaging.manager.ssl.keyStorePath

Default Value

API Name

ssl_server_keystore_location

Required

false

Streams Messaging Manager Rest Admin Server TLS/SSL Server Keystore File Password

Description

The password for the Streams Messaging Manager Rest Admin Server keystore file.

Related Name

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: Cloudera Manager Service Monitor Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Service Monitor Host parameter.

Related Name

Default Value

false

API Name

role_config_suppression_cm.metrics.service.monitor.host

Required

true

Suppress Parameter Validation: Cloudera Manager Service Monitor Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Service Monitor Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_cm.metrics.service.monitor.port

Required

true

Suppress Parameter Validation: Cloudera Manager Metrics TrustStore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Cloudera Manager Metrics TrustStore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_cm.metrics.truststore.type

Required

true

Suppress Parameter Validation: consumer.group.refresh.interval.ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the consumer.group.refresh.interval.ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_consumer.group.refresh.interval.ms

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for env.sh parameter.

Related Name

Default Value

false

API Name

role_config_suppression_env.sh_role_safety_valve

Required

true

Suppress Parameter Validation: Inactive Group Timeout

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Inactive Group Timeout parameter.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.group.timeout.ms

Required

true

Suppress Parameter Validation: inactive.producer.timeout.ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the inactive.producer.timeout.ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_inactive.producer.timeout.ms

Required

true

Suppress Parameter Validation: Kafka Connect Host

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Host parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.host

Required

true

Suppress Parameter Validation: Kafka Connect Plugin Sample Configuration Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Plugin Sample Configuration Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.plugin.sample.configs.path

Required

true

Suppress Parameter Validation: Kafka Connect Port

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Connect Port parameter.

Related Name

Default Value

false

API Name

role_config_suppression_kafka.connect.port

Required

true

Suppress Parameter Validation: LatencyMetricsConfig Metrics 15m Ttl Secs

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics 15m Ttl Secs parameter.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.15m.ttl.secs

Required

true

Suppress Parameter Validation: LatencyMetricsConfig Metrics Clean Frequency ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the LatencyMetricsConfig Metrics Clean Frequency ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.clean.frequency.ms

Required

true

Suppress Parameter Validation: Latency Metrics Data Storage Path

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Latency Metrics Data Storage Path parameter.

Related Name

Default Value

false

API Name

role_config_suppression_latencymetricsconfig.metrics.storage

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server XML Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server XML Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Metrics Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Cache Refresh Interval ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.cache.refresh.interval.ms

Required

true

Suppress Parameter Validation: Metrics Fetcher Class

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Metrics Fetcher Class parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.fetcher.class

Required

true

Suppress Parameter Validation: Number of Metrics Fetcher Threads

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Number of Metrics Fetcher Threads parameter.

Related Name

Default Value

false

API Name

role_config_suppression_metrics.fetcher.threads

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-audit.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-audit.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-policymgr-ssl.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-policymgr-ssl.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for ranger-kafka-security.xml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ranger-kafka-security.xml_role_safety_valve

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for schema-registry-client-ssl-config.yaml

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Advanced Configuration Snippet (Safety Valve) for schema-registry-client-ssl-config.yaml parameter.

Related Name

Default Value

false

API Name

role_config_suppression_schema-registry-client-ssl-config.yaml_role_safety_valve

Required

Suppress Parameter Validation: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.jdk.home

Required

true

Suppress Parameter Validation: Kafka Alert Notification Topic

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Alert Notification Topic parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.alert.notifications.topic

Required

true

Suppress Parameter Validation: Kafka Cache Refresh Interval ms

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kafka Cache Refresh Interval ms parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kafka.cache.refresh.interval.ms

Required

true

Suppress Parameter Validation: Kerberos Name Rules

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Name Rules parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.name.rules

Required

true

Suppress Parameter Validation: Kerberos Non Browser User Agents

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Non Browser User Agents parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.kerberos.non.browser.user.agents

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.authentication_services

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.authentication_services parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.authentication_services

Required

true

Suppress Parameter Validation: Oracle TLS oracle.net.ssl_cipher_suites

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Oracle TLS oracle.net.ssl_cipher_suites parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_cipher_suites

Required

true

Suppress Parameter Validation: oracle.net.ssl_version

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the oracle.net.ssl_version parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.oracle.net.ssl_version

Required

true

Suppress Parameter Validation: Streams Messaging Manager NotifierProviders Config Classes

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager NotifierProviders Config Classes parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.providerclasses

Required

true

Suppress Parameter Validation: Save Notification Read Status Per User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Save Notification Read Status Per User parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.save.notification.read.status.per.user

Required

true

Suppress Parameter Validation: Servlet filter

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Servlet filter parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.servlet.filter

Required

true

Suppress Parameter Validation: Streams Messaging Manager Admin Port (SSL)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Admin Port (SSL) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.adminport

Required

true

Suppress Parameter Validation: SSL Keystore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL Keystore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.keystoretype

Required

true

Suppress Parameter Validation: SSL TrustStore Type

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL TrustStore Type parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.truststoretype

Required

true

Suppress Parameter Validation: SSL ValidateCerts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL ValidateCerts parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatecerts

Required

true

Suppress Parameter Validation: SSL validatePeers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SSL validatePeers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.ssl.validatepeers

Required

true

Suppress Parameter Validation: Streams Messaging Manager Configuration Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Configuration Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.messaging.manager.working.directory

Required

true

Suppress Parameter Validation: Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Messaging Manager Rest Admin Server Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams_messaging_manager_server_role_env_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_messaging_manager_streams_messaging_manager_server_unexpected_exits

Required

true

Streams Messaging Manager UI Server

Advanced

Streams Messaging Manager UI Server Advanced Configuration Snippet (Safety Valve) for config.json

Description

For advanced use only. A string to be inserted into config.json for this role only.

Related Name

Default Value

API Name

config.json_role_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

Streams Messaging Manager UI Server Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_MESSAGING_MANAGER_UI_role_env_safety_valve

Required

false

Logs

Streams Messaging Manager UI Server Log Directory

Description

The log directory for log files of the role Streams Messaging Manager UI Server.

Related Name

log_dir

Default Value

/var/log/streams-messaging-manager

API Name

log_dir

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_messaging_manager_ui_fd_thresholds

Required

false

Streams Messaging Manager UI Server Host Health Test

Description

When computing the overall Streams Messaging Manager UI Server health, consider the host's health.

Related Name

Default Value

true

API Name

streams_messaging_manager_ui_host_health_enabled

Required

false

Streams Messaging Manager UI Server Process Health Test

Description

Enables the health test that the Streams Messaging Manager UI Server's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

streams_messaging_manager_ui_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Graceful Shutdown Timeout

Description

The timeout in milliseconds to wait for graceful shutdown to complete.

Related Name

Default Value

30 second(s)

API Name

graceful_stop_timeout

Required

false

Streams Messaging Manager UI Port

Description

The port on which server accepts connections.

Related Name

streams.messaging.manager.ui.port

Default Value

9991

API Name

streams.messaging.manager.ui.port

Required

true

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

Security

Streams Messaging Manager UI Server TLS/SSL Certificate Trust Store File

Description

The location on disk of the trust store, in .pem format, used to confirm the authenticity of TLS/SSL servers that Streams Messaging Manager UI Server might connect to. This is used when Streams Messaging Manager UI Server is the client in a TLS/SSL connection. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

streams.messaging.manager.ui.ssl.trust.store.location

Default Value

API Name

ssl_client_truststore_location

Required

false

Enable TLS/SSL for Streams Messaging Manager UI Server

Description

Encrypt communication between clients and Streams Messaging Manager UI Server using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

streams.messaging.manager.ui.ssl.enable

Default Value

false

API Name

ssl_enabled

Required

false

Streams Messaging Manager UI Server TLS/SSL Server CA Certificate (PEM Format)

Description

The path to the TLS/SSL file containing the certificate of the certificate authority (CA) and any intermediate certificates used to sign the server certificate. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format, and is usually created by concatenating all of the appropriate root and intermediate certificates.

Related Name

streams.messaging.manager.ui.ssl.ca.cert.location

Default Value

API Name

ssl_server_ca_certificate_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Server Certificate File (PEM Format)

Description

The path to the TLS/SSL file containing the server certificate key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

streams.messaging.manager.ui.ssl.cert.location

Default Value

API Name

ssl_server_certificate_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Server Private Key File (PEM Format)

Description

The path to the TLS/SSL file containing the private key used for TLS/SSL. Used when Streams Messaging Manager UI Server is acting as a TLS/SSL server. The certificate file must be in PEM format.

Related Name

streams.messaging.manager.ui.ssl.private.key.location

Default Value

API Name

ssl_server_privatekey_location

Required

false

Streams Messaging Manager UI Server TLS/SSL Private Key Password

Description

The password for the private key in the Streams Messaging Manager UI Server TLS/SSL Server Certificate and Private Key file. If left blank, the private key is not protected by a password.

Related Name

Default Value

API Name

ssl_server_privatekey_password

Required

false

Monitoring

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Other

Alternatives Priority

Description

The priority level that the client configuration will have in the Alternatives system on the hosts. Higher priority levels will cause Alternatives to prefer this configuration over any others.

Related Name

Default Value

50

API Name

client_config_priority

Required

true

SRM Client's Kerberos Keytab Location

Description

The path of the kerberos keytab file to be used by the SRM Client to authenticate with the co-located Kafka cluster. If left empty, the JAAS configuration of the co-located Kafka connection will not be generated.

Related Name

kerberos.keytab.location

Default Value

API Name

kerberos.keytab.location

Required

false

SRM Client's Kerberos Principal Name

Description

The kerberos principal name of the SRM Client to authenticate with the co-located Kafka cluster. If left empty, the JAAS configuration of the co-located Kafka connection will not be generated.

Related Name

kerberos.principal.name

Default Value

API Name

kerberos.principal.name

Required

false

SRM Client's Secure Storage Password

Description

Password for the secure storage that securely stores the sensitive client configurations. The default value is an empty string. If left empty, the SRM Client Secure Storage will not be created, and sensitive configuration will not be available for the client.

Related Name

securestorage.password

Default Value

API Name

securestorage.password

Required

true

Environment Variable Holding SRM Client's Secure Storage Password

Description

Name of the environment variable that stores the password for the SRM Client's secure storage.

Related Name

config.providers.secure.param.keystore.password.value

Default Value

SECURESTOREPASS

API Name

securestorage.password.variable

Required

false

SRM Client's Secure Storage Type

Description

Type of secure storage that securely stores sensitive client configurations. This must be a valid Java keystore type that supports storage of symmetric cryptographic keys.

Related Name

config.providers.secure.param.secureconfig.keystore.type

Default Value

PKCS12

API Name

securestorage.type

Required

false

SRM Client's TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when a SRM Client is authenticated as an SSL client against a Kafka cluster. If left empty, this configuration is not saved into the respective secure client configuration, preventing the use of the client keystore.

Related Name

ssl.keystore.keypassword

Default Value

API Name

ssl.keystore.keypassword

Required

false

Keystore file Location for the SRM client's TLS/SSL server

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. This path is used when an SRM Client authenticates as an SSL client against a Kafka cluster.

Related Name

ssl.keystore.location

Default Value

API Name

ssl.keystore.location

Required

false

SRM Client's TLS/SSL Server Keystore File Password

Description

The password for the SRM Client keystore file. If left empty, this config will not be saved into the respective secure client configuration, preventing the use of the Client Keystore.

Related Name

ssl.keystore.password

Monitoring

Enable Service Level Health Alerts

Description

When set, Cloudera Manager will send alerts when the health of this service reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Service Triggers

Description

The configured triggers for this service. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific service.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger fires if there are more than 10 DataNodes with more than 500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleType = DataNode and last(fd_open) > 500) DO health:bad", "streamThreshold": 10, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Default Value

[]

API Name

service_triggers

Required

true

Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, a list of derived configuration properties that will be used by the Service Monitor instead of the default ones.

Related Name

Default Value

API Name

smon_derived_configs_safety_valve

Required

false

Healthy SRM Driver Monitoring Thresholds

Description

The health test thresholds of the overall SRM Driver health. The check returns "Concerning" health if the percentage of "Healthy" SRM Drivers falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" SRM Drivers falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

STREAMS_REPLICATION_MANAGER_STREAMS_REPLICATION_MANAGER_DRIVER_healthy_thresholds

Required

false

Healthy SRM Service Monitoring Thresholds

Description

The health test thresholds of the overall SRM Service health. The check returns "Concerning" health if the percentage of "Healthy" SRM Services falls below the warning threshold. The check is unhealthy if the total percentage of "Healthy" and "Concerning" SRM Services falls below the critical threshold.

Related Name

Default Value

Warning: 94.99 %, Critical: 49.99 %

API Name

STREAMS_REPLICATION_MANAGER_STREAMS_REPLICATION_MANAGER_SERVICE_healthy_thresholds

Required

false

Other

Streams Replication Manager Cluster alias

Description

Specifies cluster aliases for the clusters SRM is connecting to. Cluster aliases are comma delimited. For example, 'primary, backup'.

Related Name

clusters

Default Value

API Name

clusters

Required

true

Streams Replication Manager Co-located Kafka Cluster Alias

Description

Alias for co-located kafka cluster. Set this only if Kafka is available on the cluster where SRM lives, and replication is needed for that Kafka cluster. For this property to have any effect, the dependency on the co-located Kafka should be activated.

Related Name

colocated.cluster.alias

Default Value

API Name

colocated.cluster.alias

Required

false

Emit Checkpoints Interval Seconds

Description

The interval at which SRM emits checkpoint information.

Related Name

emit.checkpoints.interval.seconds

Default Value

5 second(s)

API Name

emit.checkpoints.interval.seconds

Required

true

External Kafka Accounts

Description

Specifies the list of external Kafka accounts to be imported into the SRM configuration.

Related Name

external_kafka_accounts

Default Value

Required

false

SRM_JVM_PERF_OPTS

Description

SRM JVM perf and gc opts.

Related Name

SRM_JVM_PERF_OPTS

Default Value

-server -XX:+UseG1GC -XX:MaxGCPauseMillis=20 -XX:InitiatingHeapOccupancyPercent=35 -XX:+ExplicitGCInvokesConcurrent -Djava.awt.headless=true

API Name

SRM_JVM_PERF_OPTS

Required

false

Streams Replication Manager's Replication Configs

Description

Specifies cluster bootstrap server information and cluster replication pairs. Bootstrap information for each alias defined in the clusters property has to be added as follows: 'primary.bootstrap.servers=mycluster1.example.com:9092', 'backup.bootstrap.servers=mycluster2.example.com:9092'.. Each cluster configuration has to be added in a new line, if cluster has multiple nodes, add all nodes to the same line and delimit each with a comma. Cluster replication pairs can be defined as follows: 'primary->backup.enabled=true'.. Each unique replication pair has to be added in a new line.

Related Name

Suppress Configuration Validator: SRM Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the SRM Service Environment Advanced Configuration Snippet (Safety Valve) configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_streams_replication_manager_service_role_env_safety_valve

Required

true

Suppress Parameter Validation: Streams Replication Manager Cluster alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Cluster alias parameter.

Related Name

Default Value

false

API Name

service_config_suppression_clusters

Required

true

Suppress Parameter Validation: Streams Replication Manager Co-located Kafka Cluster Alias

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Co-located Kafka Cluster Alias parameter.

Related Name

Default Value

false

API Name

service_config_suppression_colocated.cluster.alias

Required

true

Suppress Parameter Validation: External Kafka Accounts

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the External Kafka Accounts parameter.

Related Name

Default Value

false

API Name

service_config_suppression_external_kafka_accounts

Required

true

Suppress Configuration Validator: Gateway Count Validator

Description

Whether to suppress configuration warnings produced by the Gateway Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_gateway_count_validator

Required

true

Suppress Parameter Validation: Kerberos Principal

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Kerberos Principal parameter.

Related Name

Default Value

false

API Name

service_config_suppression_kerberos_princ_name

Required

true

Suppress Parameter Validation: Replication Factor for Metrics Topics

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Replication Factor for Metrics Topics parameter.

Related Name

Default Value

false

API Name

service_config_suppression_metrics.topic.replication.factor

Required

true

Suppress Parameter Validation: System Group

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System Group parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_groupname

Required

true

Suppress Parameter Validation: System User

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the System User parameter.

Related Name

Default Value

false

API Name

service_config_suppression_process_username

Required

true

Suppress Parameter Validation: Service Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Triggers parameter.

Related Name

Default Value

false

API Name

service_config_suppression_service_triggers

Required

true

Suppress Parameter Validation: Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Service Monitor Derived Configs Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_smon_derived_configs_safety_valve

Required

true

Suppress Parameter Validation: Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

Related Name

Default Value

false

API Name

service_config_suppression_srm.properties_service_safety_valve

Required

true

Suppress Parameter Validation: SRM_HEAP_OPTS

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM_HEAP_OPTS parameter.

Related Name

Default Value

false

API Name

service_config_suppression_srm_heap_opts

Required

true

Suppress Parameter Validation: SRM_JMX_OPTS

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM_JMX_OPTS parameter.

Related Name

Default Value

false

API Name

service_config_suppression_srm_jmx_opts

Required

true

Suppress Parameter Validation: SRM_JVM_PERF_OPTS

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM_JVM_PERF_OPTS parameter.

Related Name

Default Value

false

API Name

service_config_suppression_srm_jvm_perf_opts

Required

true

Suppress Parameter Validation: Streams Replication Manager's Replication Configs

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager's Replication Configs parameter.

Related Name

Default Value

false

API Name

service_config_suppression_streams.replication.manager.config

Required

true

Suppress Configuration Validator: SRM Driver Count Validator

Description

Whether to suppress configuration warnings produced by the SRM Driver Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_streams_replication_manager_driver_count_validator

Required

true

Suppress Configuration Validator: SRM Service Count Validator

Description

Whether to suppress configuration warnings produced by the SRM Service Count Validator configuration validator.

Related Name

Default Value

false

API Name

service_config_suppression_streams_replication_manager_service_count_validator

Required

true

Suppress Parameter Validation: Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Service Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

service_config_suppression_streams_replication_manager_service_env_safety_valve

Required

true

Suppress Health Test: SRM Driver Health

Description

Whether to suppress the results of the SRM Driver Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_streams_replication_manager_streams_replication_manager_driver_healthy

Required

true

Suppress Health Test: SRM Service Health

Description

Whether to suppress the results of the SRM Service Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

service_health_suppression_streams_replication_manager_streams_replication_manager_service_healthy

Required

true

SRM Driver

Advanced

SRM Driver XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for SRM Driver, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value

API Name

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

For advanced use only. A string to be inserted into srm.properties for this role only.

Related Name

Default Value

API Name

srm.properties_role_safety_valve

Required

false

SRM Driver Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_REPLICATION_MANAGER_DRIVER_role_env_safety_valve

Required

false

Logs

SRM Driver Log Directory

Description

The log directory for log files of the role SRM Driver.

Related Name

log_dir

Default Value

/var/log/streams-replication-manager

API Name

log_dir

Required

false

SRM Driver Logging Threshold

Description

The minimum log level for SRM Driver logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

SRM Driver Maximum Log File Backups

Description

The maximum number of rolled log files to keep for SRM Driver logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

SRM Driver Max Log Size

Description

The maximum size, in megabytes, per log file for SRM Driver logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_used_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_replication_manager_driver_fd_thresholds

Required

false

SRM Driver Host Health Test

Description

When computing the overall SRM Driver health, consider the host's health.

Related Name

Default Value

true

API Name

streams_replication_manager_driver_host_health_enabled

Required

false

SRM Driver Process Health Test

Description

Enables the health test that the SRM Driver's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

streams_replication_manager_driver_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Streams Replication Manager Driver Target Cluster

Description

Target cluster aliases for the srm-driver. When set, the srm-driver will collect data from all clusters, but will only write to the clusters specified here. Cluster aliases are comma separated.

Related Name

streams.replication.manager.driver.target.cluster

Default Value

API Name

streams.replication.manager.driver.target.cluster

Required

false

Java Home Path Override

Description

Java Home Path Override for Streams Replication Manager. If left empty, the java shipped with CM is used.

Related Name

streams.replication.manager.jdk.home

Default Value

API Name

streams.replication.manager.jdk.home

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description

Custom control group resources to assign to this role, which will be enforced by the Linux kernel. These resources should exist on the target hosts, otherwise an error will occur when the process starts. Use the same format as used for arguments to the cgexec command: resource1,resource2:path1 or resource3:path2 For example: 'cpu,memory:my/path blkio:my2/path2' ***These settings override other cgroup settings.***

Related Name

custom.cgroups

Default Value

API Name

rm_custom_resources

Required

false

Cgroup I/O Weight

Description

Weight for the read I/O requests issued by this role. The greater the weight, the higher the priority of the requests when the host experiences I/O contention. Must be between 100 and 1000. Defaults to 1000 for processes not managed by Cloudera Manager.

Related Name

blkio.weight

Default Value

500

API Name

rm_io_weight

Required

true

Cgroup Memory Hard Limit

Description

Hard memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_hard_limit

Required

true

Cgroup Memory Soft Limit

Description

Soft memory limit to assign to this role, enforced by the Linux kernel. When the limit is reached, the kernel will reclaim pages charged to the process if and only if the host is facing memory pressure. If reclaiming fails, the kernel may kill the process. Both anonymous as well as page cache pages contribute to the limit. Use a value of -1 to specify no limit. By default processes not managed by Cloudera Manager will have no limit. If the value is -1, Cloudera Manager will not monitor Cgroup memory usage therefore some of the charts will show 'No Data'

Related Name

memory.soft_limit_in_bytes

Default Value

-1 MiB

API Name

rm_memory_soft_limit

Required

true

Security

SRM Driver TLS/SSL Trust Store File

Description

The location on disk of the trust store, in .jks format, used to confirm the authenticity of TLS/SSL servers that SRM Driver might connect to. This trust store must contain the certificate(s) used to sign the service(s) connected to. If this parameter is not provided, the default list of well-known certificate authorities is used instead.

Related Name

ssl.truststore.location

Default Value

API Name

ssl_client_truststore_location

Required

false

SRM Driver TLS/SSL Trust Store Password

Description

The password for the SRM Driver TLS/SSL Trust Store File. This password is not required to access the trust store; this field can be left blank. This password provides optional integrity checking of the file. The contents of trust stores are certificates, and certificates are public information.

Related Name

ssl.truststore.password

Default Value

API Name

ssl_client_truststore_password

Required

false

Enable TLS/SSL for SRM Driver

Description

Encrypt communication between clients and SRM Driver using Transport Layer Security (TLS) (formerly known as Secure Socket Layer (SSL)).

Related Name

ssl_enabled

Default Value

false

API Name

ssl_enabled

Required

false

SRM Driver TLS/SSL Server Keystore Key Password

Description

The password that protects the private key contained in the keystore used when SRM Driver is acting as a TLS/SSL server.

Related Name

ssl.key.password

Default Value

API Name

ssl_server_keystore_keypassword

Required

false

SRM Driver TLS/SSL Server Keystore File Location

Description

The path to the TLS/SSL keystore file containing the server certificate and private key used for TLS/SSL. Used when SRM Driver is acting as a TLS/SSL server. The keystore must be in the format specified in Administration > Settings > Java Keystore Type.

Related Name

ssl.keystore.location

Default Value

API Name

ssl_server_keystore_location

Required

false

SRM Driver TLS/SSL Server Keystore File Password

Description

The password for the SRM Driver keystore file.

Related Name

ssl.keystore.password

Default Value

API Name

ssl_server_keystore_password

Required

false

Stacks Collection

Stacks Collection Data Retention

Description

The amount of stacks data that is retained. After the retention limit is reached, the oldest data is deleted.

Related Name

stacks_collection_data_retention

Default Value

100 MiB

API Name

stacks_collection_data_retention

Required

false

Stacks Collection Directory

Description

The directory in which stacks logs are placed. If not set, stacks are logged into a stacks subdirectory of the role's log directory. If this directory already exists, it will be owned by the current role user with 755 permissions. Sharing the same directory among multiple roles will cause an ownership race.

Related Name

stacks_collection_directory

Default Value

API Name

stacks_collection_directory

Required

false

Stacks Collection Enabled

Description

Whether or not periodic stacks collection is enabled.

Related Name

stacks_collection_enabled

Default Value

false

API Name

stacks_collection_enabled

Required

true

Stacks Collection Frequency

Description

The frequency with which stacks are collected.

Related Name

stacks_collection_frequency

Default Value

5.0 second(s)

API Name

stacks_collection_frequency

Required

false

Stacks Collection Method

Description

The method used to collect stacks. The jstack option involves periodically running the jstack command against the role's daemon process. The servlet method is available for those roles that have an HTTP server endpoint exposing the current stacks traces of all threads. When the servlet method is selected, that HTTP endpoint is periodically scraped.

Related Name

stacks_collection_method

Default Value

jstack

API Name

stacks_collection_method

Required

false

Suppressions

Suppress Configuration Validator: CDH Version Validator

Description

Whether to suppress configuration warnings produced by the CDH Version Validator configuration validator.

Related Name

Default Value

false

API Name

role_config_suppression_cdh_version_validator

Required

true

Suppress Parameter Validation: SRM Driver Log Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Log Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_log_dir

Required

true

Suppress Parameter Validation: SRM Driver XML Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver XML Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_logback_safety_valve

Required

true

Suppress Parameter Validation: Heap Dump Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Heap Dump Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_oom_heap_dump_dir

Required

true

Suppress Parameter Validation: Custom Control Group Resources (overrides Cgroup settings)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Custom Control Group Resources (overrides Cgroup settings) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_rm_custom_resources

Required

true

Suppress Parameter Validation: Role Triggers

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Role Triggers parameter.

Related Name

Default Value

false

API Name

role_config_suppression_role_triggers

Required

true

Suppress Parameter Validation: SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Advanced Configuration Snippet (Safety Valve) for srm.properties parameter.

Related Name

Default Value

false

API Name

role_config_suppression_srm.properties_role_safety_valve

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Trust Store File

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Trust Store File parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_location

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Trust Store Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Trust Store Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_client_truststore_password

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Server Keystore Key Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server Keystore Key Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_keypassword

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Server Keystore File Location

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server Keystore File Location parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_location

Required

true

Suppress Parameter Validation: SRM Driver TLS/SSL Server Keystore File Password

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver TLS/SSL Server Keystore File Password parameter.

Related Name

Default Value

false

API Name

role_config_suppression_ssl_server_keystore_password

Required

true

Suppress Parameter Validation: Stacks Collection Directory

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Stacks Collection Directory parameter.

Related Name

Default Value

false

API Name

role_config_suppression_stacks_collection_directory

Required

true

Suppress Parameter Validation: Streams Replication Manager Driver Target Cluster

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Streams Replication Manager Driver Target Cluster parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.driver.target.cluster

Required

true

Suppress Parameter Validation: Java Home Path Override

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the Java Home Path Override parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams.replication.manager.jdk.home

Required

true

Suppress Parameter Validation: SRM Driver Environment Advanced Configuration Snippet (Safety Valve)

Description

Whether to suppress configuration warnings produced by the built-in parameter validation for the SRM Driver Environment Advanced Configuration Snippet (Safety Valve) parameter.

Related Name

Default Value

false

API Name

role_config_suppression_streams_replication_manager_driver_role_env_safety_valve

Required

true

Suppress Health Test: Audit Pipeline Test

Description

Whether to suppress the results of the Audit Pipeline Test heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_audit_health

Required

true

Suppress Health Test: File Descriptors

Description

Whether to suppress the results of the File Descriptors heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_file_descriptor

Required

true

Suppress Health Test: Host Health

Description

Whether to suppress the results of the Host Health heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_host_health

Required

true

Suppress Health Test: Log Directory Free Space

Description

Whether to suppress the results of the Log Directory Free Space heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_log_directory_free_space

Required

true

Suppress Health Test: Process Status

Description

Whether to suppress the results of the Process Status heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_scm_health

Required

true

Suppress Health Test: Swap Memory Usage

Description

Whether to suppress the results of the Swap Memory Usage heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_swap_memory_usage

Required

true

Suppress Health Test: Swap Memory Usage Rate Beta

Description

Whether to suppress the results of the Swap Memory Usage Rate Beta heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_swap_memory_usage_rate

Required

true

Suppress Health Test: Unexpected Exits

Description

Whether to suppress the results of the Unexpected Exits heath test. The results of suppressed health tests are ignored when computing the overall health of the associated host, role or service, so suppressed health tests will not generate alerts.

Related Name

Default Value

false

API Name

role_health_suppression_streams_replication_manager_streams_replication_manager_driver_unexpected_exits

Required

true

SRM Service

Advanced

SRM Service XML Override

Description

For advanced use only, replace entire XML in the logback configuration file for SRM Service, ignoring all logging configuration.

Related Name

logback_safety_valve

Default Value

API Name

logback_safety_valve

Required

false

Enable auto refresh for metric configurations

Description

When true, Enable Metric Collection and Metric Filter parameters will be set automatically if they're changed. Otherwise, a refresh by hand is required.

Related Name

Default Value

false

API Name

metric_config_auto_refresh

Required

false

Heap Dump Directory

Description

Path to directory where heap dumps are generated when java.lang.OutOfMemoryError error is thrown. This directory is automatically created if it does not exist. If this directory already exists, it will be owned by the current role user with 1777 permissions. Sharing the same directory among multiple roles will cause an ownership race. The heap dump files are created with 600 permissions and are owned by the role user. The amount of free space in this directory should be greater than the maximum Java Process heap size configured for this role.

Related Name

oom_heap_dump_dir

Default Value

/tmp

API Name

oom_heap_dump_dir

Required

false

Dump Heap When Out of Memory

Description

When set, generates a heap dump file when when an out-of-memory error occurs.

Related Name

Default Value

true

API Name

oom_heap_dump_enabled

Required

true

Kill When Out of Memory

Description

When set, a SIGKILL signal is sent to the role process when java.lang.OutOfMemoryError is thrown.

Related Name

Default Value

true

API Name

oom_sigkill_enabled

Required

true

Automatically Restart Process

Description

When set, this role's process is automatically (and transparently) restarted in the event of an unexpected failure. This configuration applies in the time after the Start Wait Timeout period.

Related Name

Default Value

false

API Name

process_auto_restart

Required

true

Enable Metric Collection

Description

Cloudera Manager agent monitors each service and each of its role by publishing metrics to the Cloudera Manager Service Monitor. Setting it to false will stop Cloudera Manager agent from publishing any metric for corresponding service/roles. This is usually helpful for services that generate large amount of metrics which Service Monitor is not able to process.

Related Name

Default Value

true

API Name

process_should_monitor

Required

true

Process Start Retry Attempts

Description

Number of times to try starting a role's process when the process exits before the Start Wait Timeout period. After a process is running beyond the Start Wait Timeout, the retry count is reset. Setting this configuration to zero will prevent restart of the process during the Start Wait Timeout period.

Related Name

Default Value

3

API Name

process_start_retries

Required

false

Process Start Wait Timeout

Description

The time in seconds to wait for a role's process to start successfully on a host. Processes which exit/crash before this time will be restarted until reaching the limit specified by the Start Retry Attempts count parameter. Setting this configuration to zero will turn off this feature.

Related Name

Default Value

20

API Name

process_start_secs

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm-service.yaml

Description

For advanced use only. A string to be inserted into srm-service.yaml for this role only.

Related Name

Default Value

API Name

srm-service.yaml_role_safety_valve

Required

false

SRM Service Advanced Configuration Snippet (Safety Valve) for srm.properties

Description

For advanced use only. A string to be inserted into srm.properties for this role only.

Related Name

Default Value

API Name

srm.properties_role_safety_valve

Required

false

SRM Service Environment Advanced Configuration Snippet (Safety Valve)

Description

For advanced use only, key-value pairs (one on each line) to be inserted into a role's environment. Applies to configurations of this role except client configuration.

Related Name

Default Value

API Name

STREAMS_REPLICATION_MANAGER_SERVICE_role_env_safety_valve

Required

false

Logs

SRM Service Log Directory

Description

The log directory for log files of the role SRM Service.

Related Name

log_dir

Default Value

/var/log/streams-replication-manager

API Name

log_dir

Required

false

SRM Service Logging Threshold

Description

The minimum log level for SRM Service logs

Related Name

Default Value

INFO

API Name

log_threshold

Required

false

SRM Service Maximum Log File Backups

Description

The maximum number of rolled log files to keep for SRM Service logs. Typically used by log4j or logback.

Related Name

Default Value

10

API Name

max_log_backup_index

Required

false

SRM Service Max Log Size

Description

The maximum size, in megabytes, per log file for SRM Service logs. Typically used by log4j or logback.

Related Name

Default Value

200 MiB

API Name

max_log_size

Required

false

Monitoring

Enable Health Alerts for this Role

Description

When set, Cloudera Manager will send alerts when the health of this role reaches the threshold specified by the EventServer setting eventserver_health_events_alert_threshold

Related Name

Default Value

true

API Name

enable_alerts

Required

false

Enable Configuration Change Alerts

Description

When set, Cloudera Manager will send alerts when this entity's configuration changes.

Related Name

Default Value

false

API Name

enable_config_alerts

Required

false

Log Directory Free Space Monitoring Absolute Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory.

Related Name

Default Value

Warning: 10 GiB, Critical: 5 GiB

API Name

log_directory_free_space_absolute_thresholds

Required

false

Log Directory Free Space Monitoring Percentage Thresholds

Description

The health test thresholds for monitoring of free space on the filesystem that contains this role's log directory. Specified as a percentage of the capacity on that filesystem. This setting is not used if a Log Directory Free Space Monitoring Absolute Thresholds setting is configured.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

log_directory_free_space_percentage_thresholds

Required

false

Metric Filter

Description

Defines a Metric Filter for this role. Cloudera Manager Agents will not send filtered metrics to the Service Monitor. Define the following fields:

- Health Test Metric Set - Select this parameter to collect only metrics required for health tests.
- Default Dashboard Metric Set - Select this parameter to collect only metrics required for the default dashboards. For user-defined charts, you must add the metrics you require for the chart using the Custom Metrics parameter.
- Include/Exclude Custom Metrics - Select Include to specify metrics that should be collected. Select Exclude to specify metrics that should not be collected. Enter the metric names to be included or excluded using the Metric Name parameter.
- Metric Name - The name of a metric that will be included or excluded during metric collection.

If you do not select Health Test Metric Set or Default Dashboard Metric Set, or specify metrics by name, metric filtering will be turned off (this is the default behavior).For example, the following configuration enables the collection of metrics required for Health Tests and the jvm_heap_use d_mb metric:

- Include only Health Test Metric Set: Selected.
- Include/Exclude Custom Metrics: Set to Include.
- Metric Name: jvm_heap_used_mb

You can also view the JSON representation for this parameter by clicking View as JSON. In this example, the JSON looks like this:{ "includeHealthTestMetricSet": true, "filterType": "whitelist", "metrics": ["jvm_heap_used_mb"] }

Related Name

Default Value

API Name

monitoring_metric_filter

Required

false

Swap Memory Usage Rate Thresholds

Description

The health test thresholds on the swap memory usage rate of the process. Specified as the change of the used swap memory during the predefined period.

Related Name

Default Value

Warning: Never, Critical: Never

API Name

process_swap_memory_rate_thresholds

Required

false

Swap Memory Usage Rate Window

Description

The period to review when computing unexpected swap memory usage change of the process.

Related Name

common.process.swap_memory_rate_window

Default Value

5 minute(s)

API Name

process_swap_memory_rate_window

Required

false

Process Swap Memory Thresholds

Description

The health test thresholds on the swap memory usage of the process. This takes precedence over the host level threshold.

Related Name

Default Value

Warning: 200 B, Critical: Never

API Name

process_swap_memory_thresholds

Required

false

Role Triggers

Description

The configured triggers for this role. This is a JSON-formatted list of triggers. These triggers are evaluated as part as the health system. Every trigger expression is parsed, and if the trigger condition is met, the list of actions provided in the trigger expression is executed. Each trigger has the following fields:

- triggerName (mandatory) - The name of the trigger. This value must be unique for the specific role.
- triggerExpression (mandatory) - A tsquery expression representing the trigger.
- streamThreshold (optional) - The maximum number of streams that can satisfy a condition of a trigger before the condition fires. By default set to 0, and any stream returned causes the condition to fire.
- enabled (optional) - By default set to 'true'. If set to 'false', the trigger is not evaluated.
- expressionEditorConfig (optional) - Metadata for the trigger editor. If present, the trigger should only be edited from the Edit Trigger page; editing the trigger here can lead to inconsistencies.

For example, the following JSON formatted trigger configured for a DataNode fires if the DataNode has more than 1500 file descriptors opened:[{"triggerName": "sample-trigger", "triggerExpression": "IF (SELECT fd_open WHERE roleName=$ROLENAME and last(fd_open) > 1500) DO health:bad", "streamThreshold": 0, "enabled": "true"}]See the trigger rules documentation for more details on how to write triggers using tsquery.The JSON format is evolving and may change and, as a result, backward compatibility is not guaranteed between releases.

Related Name

Default Value

[]

API Name

role_triggers

Required

true

File Descriptor Monitoring Thresholds

Description

The health test thresholds of the number of file descriptors used. Specified as a percentage of file descriptor limit.

Related Name

Default Value

Warning: 50.0 %, Critical: 70.0 %

API Name

streams_replication_manager_service_fd_thresholds

Required

false

SRM Service Host Health Test

Description

When computing the overall SRM Service health, consider the host's health.

Related Name

Default Value

true

API Name

streams_replication_manager_service_host_health_enabled

Required

false

SRM Service Process Health Test

Description

Enables the health test that the SRM Service's process state is consistent with the role configuration

Related Name

Default Value

true

API Name

streams_replication_manager_service_scm_health_enabled

Required

false

Unexpected Exits Thresholds

Description

The health test thresholds for unexpected exits encountered within a recent period specified by the unexpected_exits_window configuration for the role.

Related Name

Default Value

Warning: Never, Critical: Any

API Name

unexpected_exits_thresholds

Required

false

Unexpected Exits Monitoring Period

Description

The period to review when computing unexpected exits.

Related Name

Default Value

5 minute(s)

API Name

unexpected_exits_window

Required

false

Other

Log Format

Description

Format of the messages output by logger.

Related Name

streams.replication.manager.log.format

Default Value

%dISO8601 %p %c: %m%n%rEx

API Name

streams.replication.manager.log.format

6671

API Name

streams.replication.manager.service.ssl.port

Required

true

SRM Service Metrics Grace Period

Description

SRM Service Metrics grace period in ms. Reject out-of-order events that arrive more than millisAfterWindowEnd after the end of its window.

Related Name

streams.replication.manager.service.streams.metrics.grace

Default Value

1 minute(s)

API Name

streams.replication.manager.service.streams.metrics.grace

Required

true

SRM Service Metrics Retention Period

Description

SRM Service Metrics retention period in ms. Note that the retention period must be at least long enough to contain the windowed data's entire life cycle, from window-start through window-end, and for the entire grace period. (> 60 000 + metrics.grace)

Related Name

streams.replication.manager.service.streams.metrics.retention

Default Value

1 hour(s)

API Name

streams.replication.manager.service.streams.metrics.retention

Required

true

Streams Replication Manager Service Target Cluster

Description

Target cluster from which the SRM Service collects data.

Related Name

streams.replication.manager.service.target.cluster

Default Value

API Name

streams.replication.manager.service.target.cluster

Required

true

SSL Keystore Type

Description

The keystore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.replication.manager.ssl.keyStoreType

Default Value

API Name

streams.replication.manager.ssl.keyStoreType

Required

false

SSL TrustStore Type

Description

The truststore type. Required if SSL is enabled for the SRM Service. For example, PKCS12 or JKS. If it is left empty then the keystore type will come from CM settings.

Related Name

streams.replication.manager.ssl.trustStoreType

Default Value

API Name

streams.replication.manager.ssl.trustStoreType

Required

false

SSL ValidateCerts

Description

Whether or not to validate TLS certificates before starting. If enabled, it will refuse to start with expired or otherwise invalid certificates. Note: if this is enabled, the certificate revocation method (CRLDP/OCSP) is also needed. This can be done by overriding Dropwizard configuration with Java system properties. E.g: -Ddw.server.applicationConnectors[0].enableCRLDP=true (more details at https://www.dropwizard.io/en/latest/manual/core.html)

Related Name

streams.replication.manager.ssl.validateCerts

Default Value

false

API Name

streams.replication.manager.ssl.validateCerts

Required

false

SSL ValidatePeers

Description

Whether or not to validate TLS peer certificates.

Related Name

streams.replication.manager.ssl.validatePeers

Default Value

false

API Name

streams.replication.manager.ssl.validatePeers

Required

false

Performance

Maximum Process File Descriptors

Description

If configured, overrides the process soft and hard rlimits (also called ulimits) for file descriptors to the configured value.

Related Name

Default Value

API Name

rlimit_fds

Required

false

Resource Management

Cgroup CPU Shares

Description

Number of CPU shares to assign to this role. The greater the number of shares, the larger the share of the host's CPUs that will be given to this role when the host experiences CPU contention. Must be between 2 and 262144. Defaults to 1024 for processes not managed by Cloudera Manager.

Related Name

cpu.shares

Default Value

1024

API Name

rm_cpu_shares

Required

true

Custom Control Group Resources (overrides Cgroup settings)

Description
