# Private cloud support

Learn about the supported platforms for Cloudera Data Warehouse (CDW) Private Cloud.

CDW Private Cloud service supports private cloud deployments on Red Hat OpenShift clusters and Embedded Container Service (ECS). Much of the installation and deployment configuration for private cloud is performed before you register environments with Management Console. However, in addition to the steps described in the installation guide and video, you must perform additional configurations to activate an environment so you can use it with the CDW service. These steps are documented in Activating OpenShift environments and ECS environments.
