Release Information

Version: Cloudera Enterprise 5.x
Date: May 20, 2021

Table of Contents

Cloudera Enterprise 5.x Release Notes.....	19
---	-----------

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions.....	20
--	-----------

CDH Requirements for Cloudera Manager.....	20
CDH and Cloudera Manager Supported Operating Systems.....	20
<i>CDH and Cloudera Manager 5.16.x Supported Operating Systems.....</i>	<i>21</i>
<i>CDH and Cloudera Manager 5.15.x Supported Operating Systems.....</i>	<i>22</i>
<i>CDH and Cloudera Manager 5.14.x Supported Operating Systems.....</i>	<i>22</i>
<i>CDH and Cloudera Manager 5.13.x Supported Operating Systems.....</i>	<i>23</i>
<i>CDH and Cloudera Manager 5.12.x Supported Operating Systems.....</i>	<i>23</i>
<i>CDH and Cloudera Manager 5.11.x Supported Operating Systems.....</i>	<i>24</i>
<i>CDH and Cloudera Manager 5.10.x Supported Operating Systems.....</i>	<i>25</i>
<i>CDH and Cloudera Manager 5.9.x Supported Operating Systems.....</i>	<i>25</i>
<i>CDH and Cloudera Manager 5.8.x Supported Operating Systems.....</i>	<i>26</i>
<i>CDH and Cloudera Manager 5.7.x Supported Operating Systems.....</i>	<i>26</i>
<i>CDH and Cloudera Manager 5.6.x Supported Operating Systems.....</i>	<i>27</i>
<i>CDH and Cloudera Manager 5.5.x Supported Operating Systems.....</i>	<i>27</i>
<i>CDH and Cloudera Manager 5.4.x Supported Operating Systems.....</i>	<i>28</i>
<i>CDH and Cloudera Manager 5.3.x Supported Operating Systems.....</i>	<i>28</i>
<i>CDH and Cloudera Manager 5.2.x Supported Operating Systems.....</i>	<i>29</i>
<i>CDH and Cloudera Manager 5.1.x Supported Operating Systems.....</i>	<i>29</i>
<i>CDH and Cloudera Manager 5.0.x Supported Operating Systems.....</i>	<i>30</i>
Filesystem Requirements.....	30
Supported Filesystems.....	30
File Access Time.....	30
Filesystem Mount Options.....	31
CDH and Cloudera Manager Supported Databases.....	31
CDH and Cloudera Manager Supported JDK Versions.....	33
JDK 7.....	33
JDK 8.....	34
Java Cryptography Extension (JCE) Unlimited Strength Jurisdiction Requirement.....	35
Cloudera Manager Supported Browsers.....	35
Hue Supported Browsers.....	36
CDH and Cloudera Manager Supported Transport Layer Security Versions.....	36
Cloudera Manager Resource Requirements.....	38
CDH and Cloudera Manager Networking and Security Requirements.....	39
Product Compatibility Matrix for Apache Accumulo.....	42

Product Compatibility Matrix for Apache Impala.....	42
Product Compatibility Matrix for CDK Powered By Apache Kafka.....	44
Kafka Client-Broker Compatibility across Kafka Versions.....	45
Kafka Client Versions Used by Apache Flume in CDH.....	45
Kafka Client Versions used by Apache Spark in CDH.....	46
Product Compatibility Matrix for Apache Kudu.....	47
<i>Supported Operating Systems (Kudu 1.2.0 / CDH 5.10.x and higher).....</i>	47
<i>Filesystem Requirements.....</i>	48
<i>nscd Recommendation.....</i>	48
<i>JDK Requirements.....</i>	48
<i>Hardware Requirements.....</i>	48
Product Compatibility Matrix for Cloudera Navigator.....	48
<i>Cloudera Navigator Supported Databases.....</i>	60
<i>Cloudera Navigator Supported Browsers.....</i>	60
<i>Cloudera Navigator Supported CDH and Managed Service Versions.....</i>	60
Data at Rest Encryption Requirements.....	61
Product Compatibility Matrix for Cloudera Navigator Encryption.....	63
<i>Cloudera Navigator Key Trustee Server.....</i>	63
<i>Key Trustee KMS.....</i>	65
<i>Cloudera Navigator HSM KMS.....</i>	69
<i>Cloudera Navigator Key HSM.....</i>	70
<i>Cloudera Navigator Encrypt.....</i>	72
Product Compatibility Matrix for Apache Sentry.....	74
Product Compatibility Matrix for Apache Spark.....	75
Product Compatibility for Dell EMC Isilon.....	76
Product Compatibility Matrix for Backup and Disaster Recovery.....	77
<i>Supported Replication Scenarios for Clusters using Isilon Storage.....</i>	80
Supported Configurations with Virtualization and Cloud Platforms.....	80
<i>Amazon Web Services.....</i>	81
<i>Google Cloud Platform.....</i>	81
<i>Microsoft Azure.....</i>	81
<i>VMware.....</i>	81
<i>Red Hat OpenStack Platform (OSP) 11.....</i>	81

Hardware Requirements Guide.....82

Cloudera Manager.....	82
<i>Cloudera Manager Server Storage Requirements.....</i>	82
<i>Host Based Cloudera Manager Server Requirements.....</i>	82
<i>Service Monitor Requirements.....</i>	82
<i>Host Monitor.....</i>	83
<i>Reports Manager.....</i>	84
<i>Agent Hosts.....</i>	84
<i>Event Server.....</i>	84

<i>Alert Publisher</i>	84
Cloudera Navigator.....	84
Cloudera Data Science Workbench	86
CDH	87
<i>Accumulo</i>	87
<i>Flume</i>	88
<i>HDFS</i>	88
<i>HBase</i>	89
<i>Hive</i>	90
<i>HSM KMS</i>	91
<i>Hue</i>	92
<i>Impala</i>	92
<i>Kafka</i>	93
<i>Key Trustee Server</i>	93
<i>Key Trustee KMS</i>	94
<i>Kudu</i>	94
<i>Oozie</i>	94
<i>Search</i>	95
<i>Sentry</i>	95
<i>Spark</i>	96
<i>YARN</i>	96
<i>ZooKeeper</i>	98

Version and Download Information.....99

Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication.....	99
Cloudera Manager Version and Download Information.....	105
<i>Component Versions</i>	106
<i>Cloudera Manager 5.16.2.4505</i>	106
<i>Cloudera Manager 5.16.2</i>	108
<i>Previous Versions of Cloudera Manager 5</i>	110
CDH Version and Packaging Information.....	145
<i>CDH Download Information</i>	146
<i>CDH 5 Packaging and Tarball Information</i>	230
<i>Using the CDH 5 Maven Repository</i>	538
Cloudera Navigator Key Trustee Server Version and Download Information.....	1760
<i>Navigator Key Trustee Server 5.15</i>	1760
<i>Navigator Key Trustee Server 5.14</i>	1760
<i>Navigator Key Trustee Server 5.13</i>	1761
<i>Navigator Key Trustee Server 5.12</i>	1761
<i>Navigator Key Trustee Server 5.11</i>	1761
<i>Navigator Key Trustee Server 5.10</i>	1762
<i>Navigator Key Trustee Server 5.9</i>	1762
<i>Navigator Key Trustee Server 5.8</i>	1763

Navigator Key Trustee Server 5.7.....1763
Navigator Key Trustee Server 5.5.....1764
Navigator Key Trustee Server 5.4.....1764
Cloudera Navigator Key HSM Version and Download Information.....1766
Cloudera Navigator Key HSM 1.11.....1766
Cloudera Navigator Key HSM 1.10.....1766
Cloudera Navigator Key HSM 1.9.....1766
Cloudera Navigator Key HSM 1.8.....1767
Cloudera Navigator Key HSM 1.7.....1767
Cloudera Navigator Key HSM 1.6.....1767
Cloudera Navigator Key HSM 1.5.....1767
Cloudera Navigator Key HSM 1.4.....1768
Key Trustee KMS Version and Download Information.....1768
Key Trustee KMS 5.16.....1768
Key Trustee KMS 5.15.....1769
Key Trustee KMS 5.14.....1769
Key Trustee KMS 5.13.....1770
Key Trustee KMS 5.12.1.....1770
Key Trustee KMS 5.12.....1771
Key Trustee KMS 5.11.....1771
Key Trustee KMS 5.10.....1772
Key Trustee KMS 5.9.....1772
Key Trustee KMS 5.8.....1773
Key Trustee KMS 5.7.....1774
Key Trustee KMS 5.5.....1775
Key Trustee KMS 5.4.....1776
HSM KMS Version and Download Information.....1779
HSM KMS 5.15.....1779
HSM KMS 5.14.....1780
HSM KMS 5.13.....1780
HSM KMS 5.12.1.....1781
HSM KMS 5.12.....1781
Cloudera Navigator Encrypt Version and Download Information.....1782
Navigator Encrypt 3.16.....1782
Navigator Encrypt 3.15.....1783
Navigator Encrypt 3.14.....1784
Navigator Encrypt 3.13.....1785
Navigator Encrypt 3.12.....1785
Navigator Encrypt 3.11.....1786
Navigator Encrypt 3.10.....1787
Navigator Encrypt 3.9.....1788
Navigator Encrypt 3.8.....1789
Navigator Encrypt 3.7.....1790
Impala Version and Download Information.....1791

<i>Impala Download Information</i>	1792

CDH 5 Release Notes.....1812

New Features and Changes in CDH 5.....	1812
<i>What's New in CDH 5.16.x</i>	1812
<i>What's New in CDH 5.15.x</i>	1814
<i>What's New in CDH 5.14.x</i>	1816
<i>What's New in CDH 5.13.x</i>	1817
<i>What's New in CDH 5.12.x</i>	1819
<i>What's New in CDH 5.11.x</i>	1822
<i>What's New in CDH 5.10.x</i>	1824
<i>What's New In CDH 5.9.x</i>	1825
<i>What's New In CDH 5.8.x</i>	1827
<i>What's New In CDH 5.7.x</i>	1829
<i>What's New In CDH 5.6.x</i>	1834
<i>What's New In CDH 5.5.x</i>	1834
<i>What's New In CDH 5.4.x</i>	1838
<i>What's New In CDH 5.3.x</i>	1845
<i>What's New In CDH 5.2.x</i>	1848
<i>What's New in CDH 5.1.x</i>	1854
<i>What's New in CDH 5.0.x</i>	1858
<i>What's New In CDH 5 Beta Releases</i>	1861
<i>What's New in Apache Impala</i>	1869
<i>What's New in Apache Kudu</i>	1901

Incompatible Changes and Limitations.....	1916
<i>Apache Avro Incompatible Changes and Limitations.....</i>	<i>1916</i>
<i>Apache Crunch Incompatible Changes and Limitations.....</i>	<i>1916</i>
<i>Apache DataFu Incompatible Changes and Limitations.....</i>	<i>1916</i>
<i>Apache Flume Incompatible Changes and Limitations.....</i>	<i>1916</i>
<i>Apache Hadoop Incompatible Changes and Limitations.....</i>	<i>1916</i>
<i>Apache HBase Incompatible Changes and Limitations.....</i>	<i>1920</i>
<i>Apache Hive Incompatible Changes and Limitations.....</i>	<i>1924</i>
<i>Hue Incompatible Changes and Limitations.....</i>	<i>1925</i>
<i>Apache Impala Incompatible Changes and Limitations.....</i>	<i>1925</i>
<i>Cloudera Distribution of Apache Kafka Incompatible Changes and Limitations.....</i>	<i>1937</i>
<i>Kite Incompatible Changes and Limitations.....</i>	<i>1937</i>
<i>Apache Kudu Incompatible Changes and Limitations.....</i>	<i>1937</i>
<i>Llama Incompatible Changes and Limitations.....</i>	<i>1938</i>
<i>Apache Mahout Incompatible Changes and Limitations.....</i>	<i>1938</i>
<i>Apache Oozie Incompatible Changes and Limitations.....</i>	<i>1939</i>
<i>Apache Pig Incompatible Changes and Limitations.....</i>	<i>1939</i>
<i>Cloudera Search Incompatible Changes and Limitations.....</i>	<i>1939</i>
<i>Apache Sentry Incompatible Changes.....</i>	<i>1942</i>
<i>Apache Spark Incompatible Changes and Limitations.....</i>	<i>1942</i>
<i>Apache Sqoop Incompatible Changes and Limitations.....</i>	<i>1943</i>
<i>Apache Whirr Incompatible Changes and Limitations.....</i>	<i>1943</i>
<i>Apache ZooKeeper Incompatible Changes and Limitations.....</i>	<i>1943</i>
Known Issues in CDH 5.....	1944
<i>Operating System Known Issues.....</i>	<i>1944</i>
<i>Performance Known Issues.....</i>	<i>1949</i>
<i>Install and Upgrade Known Issues.....</i>	<i>1949</i>
<i>Apache Avro Known Issues.....</i>	<i>1951</i>
<i>Apache Flume Known Issues.....</i>	<i>1951</i>
<i>Apache Hadoop Known Issues.....</i>	<i>1952</i>
<i>Apache HBase Known Issues.....</i>	<i>1970</i>
<i>Apache Hive Known Issues.....</i>	<i>1979</i>
<i>Hue Known Issues.....</i>	<i>1991</i>
<i>Apache Impala Known Issues.....</i>	<i>1995</i>
<i>Cloudera Distribution of Apache Kafka Known Issues.....</i>	<i>2018</i>
<i>Apache Kudu Known Issues.....</i>	<i>2019</i>
<i>Apache Mahout Known Issues.....</i>	<i>2024</i>
<i>Apache Oozie Known Issues.....</i>	<i>2024</i>
<i>Apache Parquet Known Issues.....</i>	<i>2027</i>
<i>Apache Pig Known Issues.....</i>	<i>2027</i>
<i>Cloudera Search Known Issues.....</i>	<i>2028</i>
<i>Apache Sentry Known Issues.....</i>	<i>2035</i>
<i>Apache Spark Known Issues.....</i>	<i>2043</i>
<i>Apache Sqoop Known Issues.....</i>	<i>2049</i>
<i>Apache Phoenix Known Issues.....</i>	<i>2052</i>

<i>Apache ZooKeeper Known Issues</i>	2053
Issues Fixed in CDH 5.....	2054
<i>Issues Fixed in CDH 5.16.x</i>	2054
<i>Issues Fixed in CDH 5.15.x</i>	2063
<i>Issues Fixed in CDH 5.14.x</i>	2076
<i>Issues Fixed in CDH 5.13.x</i>	2106
<i>Issues Fixed in CDH 5.12.x</i>	2134
<i>Issues Fixed in CDH 5.11.x</i>	2151
<i>Issues Fixed in CDH 5.10.x</i>	2168
<i>Issues Fixed in CDH 5.9.x</i>	2194
<i>Issues Fixed in CDH 5.8.x</i>	2232
<i>Issues Fixed in CDH 5.7.x</i>	2264
<i>Issues Fixed in CDH 5.6.x</i>	2291
<i>Issues Fixed in CDH 5.5.x</i>	2297
<i>Issues Fixed in CDH 5.4.x</i>	2320
<i>Issues Fixed in CDH 5.3.x</i>	2346
<i>Issues Fixed in CDH 5.2.x</i>	2362
<i>Issues Fixed in CDH 5.1.x</i>	2370
<i>Issues Fixed in CDH 5.0.x</i>	2376
<i>Issues Fixed in CDH 5 Beta Releases</i>	2383
<i>Fixed Issues in Apache Impala</i>	2384
<i>Apache Kudu Fixed Issues</i>	2464

Cloudera Manager 5 Release Notes.....2472

New Features and Changes in Cloudera Manager 5.....	2472
<i>What's New in Cloudera Manager 5</i>	2472
<i>Incompatible Changes in Cloudera Manager 5</i>	2507
<i>Changed Features and Behaviors in Cloudera Manager 5</i>	2510
Known Issues and Workarounds in Cloudera Manager 5.....	2518
<i>Cloudera Manager 6.x issue with the service role Resume</i>	2518
<i>ZooKeeper JMX did not support TLS when managed by Cloudera Manager</i>	2519
<i>Yarn Application Masters fail when a concurrent Deploy Client Configuration job is executed</i>	2519
<i>Cloudera Manager Agent Failed to deactivate alternatives for parcels</i>	2520
<i>The client configuration deployment fails after upgrade</i>	2520
<i>Backup and Disaster Recovery replication with Isilon storage can fail</i>	2520
<i>Backup and Disaster Recovery replication can fail if one of the destination KMSs fail</i>	2520
<i>Cloudera Manager installation fails on MariaDB 10.2.8 and later</i>	2521
<i>Failures during Cloudera Manager installation or upgrade</i>	2521
<i>Upgrade to CDH 5.15.1 fails with CM 5.15.1 and OpenJDK</i>	2521
<i>After upgrade to Cloudera Manager 6, Kafka brokers and MirrorMaker marked as having stale configurations</i>	2521
<i>Parcel distribution fails and times out on Ubuntu 14.04 with Cloudera Express license</i>	2522
<i>Flume service with Kafka over TLS marked as stale after upgrading Cloudera Manager from 5.15.0</i>	2522
<i>Flume uses default values for Kafka TLS settings</i>	2522
<i>Upgrades from Cloudera Enterprise 5.15 to 6.0 Not Supported</i>	2523

<i>Cloudera Manager read-only user can access sensitive cluster information.....</i>	<i>2523</i>
<i>Accumulo health check fails on Cloudera Manager upgrade</i>	<i>2523</i>
<i>Cloudera Manager should not omit LDAP GROUP_MAPPING passwords from NodeManager.....</i>	<i>2523</i>
<i>Import step in Hive replication can fail in 5.15.0 due to a Hive concurrency issue.....</i>	<i>2524</i>
<i>Hard Restart of Cloudera Manager Agents May Cause Subsequent Service Errors.....</i>	<i>2524</i>
<i>Editing Cloudera Manager configurations in Google Chrome may lead to unexpected configuration loss.....</i>	<i>2524</i>
<i>Impala Dynamic Resource Pools wrongly gives everyone access to root pool (and all child pools).....</i>	<i>2524</i>
<i>Cross-site scripting vulnerability in Cloudera Manager</i>	<i>2524</i>
<i>Backup and Disaster Recovery (BDR) HDFS and Hive Replications may fail when replicating from source clusters which use HDFS HA and are managed by Cloudera Manager 5.13.3 or 5.14.2 to destination clusters managed by Cloudera 5.14.2.....</i>	<i>2525</i>
<i>Hive Replications Can Fail Intermittently.....</i>	<i>2526</i>
<i>HDFS DataNode stale configuration.....</i>	<i>2526</i>
<i>YARN MapReduce Job History stale configuration.....</i>	<i>2527</i>
<i>Logging issue slows down Backup and Disaster Recovery Hive and HDFS Replication jobs</i>	<i>2527</i>
<i>Cloudera Manager upgrade workflow incorrectly requires deploying some optional management roles</i>	<i>2527</i>
<i>ADLS Credentials in Log Files.....</i>	<i>2528</i>
<i>Installing Cloudera Manager on SLES Using the Installer Does Not Work.....</i>	<i>2528</i>
<i>Cloudera Navigator is not supported in multi-cluster deployments of Cloudera Manager versions 5.12.0, 5.12.1, and 5.13.0.....</i>	<i>2528</i>
<i>Backup and Disaster Recovery Hive replication fails intermittently.....</i>	<i>2528</i>
<i>Impala logs missing from diagnostic bundle.....</i>	<i>2529</i>
<i>Accumulo logs are not included in diagnostic bundles.....</i>	<i>2529</i>
<i>Backup and Disaster Recovery replication fails between two clusters when data is copied from one encryption zone to another when using CDH 5.12.0 or higher.....</i>	<i>2529</i>
<i>Backup and Disaster Recovery Hive replication fails during the Export Hive metastore step when using encrypted zones.....</i>	<i>2529</i>
<i>Backup and Disaster Recovery replication fails if the previous run is aborted.....</i>	<i>2529</i>
<i>Backup and Disaster Recovery (Hive) replication fails if the user directory is encrypted.....</i>	<i>2529</i>
<i>Upgrade to CDH 5.13 or higher Requires Pre-installation of Spark 2.1 or Spark 2.2.....</i>	<i>2530</i>
<i>Record Service no longer supported as of CDH 5.13; upgrade fails after from some lower versions.....</i>	<i>2530</i>
<i>Sentry may require increased Java heap settings before upgrading CDH to 5.13.....</i>	<i>2530</i>
<i>Renaming an empty directory on Amazon S3 when using DynamoDB with S3Guard may fail.....</i>	<i>2530</i>
<i>Change in Hue Load Balancer version causes Hue Load Balancer and Server to be marked with stale configuration.....</i>	<i>2531</i>
<i>Hue Load Balancer SSL Handshake error.....</i>	<i>2531</i>
<i>Apache MapReduce Jobs May Fail During Rolling Upgrade to CDH 5.11.0 or CDH 5.11.1.....</i>	<i>2531</i>
<i>Rolling Upgrade with GPL Extras Parcel Causes Oozie to Fail.....</i>	<i>2532</i>
<i>Maintenance State Minimal Block Replication staleness after upgrade.....</i>	<i>2532</i>
<i>YARN ACL configuration property staleness after upgrade.....</i>	<i>2532</i>
<i>Adding a service to an existing cluster.....</i>	<i>2532</i>
<i>Services die due to HDFS taking too long to start.....</i>	<i>2532</i>
<i>hostname parameter is not passed to Impala catalog role.....</i>	<i>2533</i>
<i>Zookeeper Package Installation fails with Debian 7</i>	<i>2533</i>
<i>Automated Cloudera Manager installer fails on Ubuntu 16.04.....</i>	<i>2534</i>

<i>Reboot of HDFS nodes running RHEL 7 or CentOS 7 shortly after enabling High Availability or migrating NameNodes can lead to data loss or other issues.....</i>	<i>2534</i>
<i>The Limit Nonsecure Container Executor Users property has no effect in Cloudera 5.11</i>	<i>2534</i>
<i>Graceful shutdown of Kafka brokers does not work as expected.....</i>	<i>2535</i>
<i>Spark Gateway roles should be added to every host.....</i>	<i>2535</i>
<i>HBase configuration is supplied for Hive when HBase service is not selected.....</i>	<i>2535</i>
<i>Hive Replication fails when Impala is SSL enabled but Hadoop services are not.....</i>	<i>2536</i>
<i>python-psycopg2 Dependency.....</i>	<i>2536</i>
<i>Pauses in Cloudera Manager after adding peer.....</i>	<i>2536</i>
<i>Cannot select time period in custom charts in C5.9.....</i>	<i>2537</i>
<i>Cloudera Manager 5.8.2 allows you to select nonexistent CDH 5.8.1 package installation.....</i>	<i>2537</i>
<i>Error when distributing parcels: No such torrent.....</i>	<i>2537</i>
<i>Hive Replication Metadata Transfer Step fails with Temporary AWS Credential Provider.....</i>	<i>2537</i>
<i>Hive table Views do not get restored from S3</i>	<i>2537</i>
<i>ACLs are not replicated when restoring Hive data from S3</i>	<i>2538</i>
<i>Snapshot diff is not working for Hive to S3 replication when data is deleted on source.....</i>	<i>2538</i>
<i>Block agents from heartbeating to a Cloudera Manager with different UUID until agent restart.....</i>	<i>2538</i>
<i>Cloudera Manager set catalogd default jvm memory to 4G can cause out of memory error on upgrade to Cloudera Manager 5.7 or higher.....</i>	<i>2538</i>
<i>Cloudera Manager 5.7.4 installer does not show Key Trustee KMS.....</i>	<i>2538</i>
<i>Class Not Found Error when upgrading to Cloudera Manager 5.7.2.....</i>	<i>2538</i>
<i>Kerberos setup fails on Debian 8.2.....</i>	<i>2538</i>
<i>Password in Cloudera Manager's <code>db.properties</code> file is not redacted.....</i>	<i>2539</i>
<i>Cluster provisioning fails.....</i>	<i>2539</i>
<i>Cloudera Manager can run out of memory if a remote repository URL is unreachable.....</i>	<i>2539</i>
<i>Clients can run Hive on Spark jobs even if Hive dependency on Spark is not configured.....</i>	<i>2539</i>
<i>The YARN NodeManager connectivity health test does not work for CDH 5.....</i>	<i>2540</i>
<i>HDFS HA clusters see NameNode failures when KDC connectivity is bad.....</i>	<i>2540</i>
<i>The HDFS File browser in Cloudera Manager fails when HDFS federation is enabled.....</i>	<i>2540</i>
<i>Hive Metastore canary fails to drop database.....</i>	<i>2540</i>
<i>Cloudera Manager upgrade fails due to incorrect Sqoop 2 path.....</i>	<i>2540</i>
<i>NameNode incorrectly reports missing blocks during rolling upgrade.....</i>	<i>2541</i>
<i>Using ext3 for server dirs easily hit inode limit.....</i>	<i>2541</i>
<i>Backup and disaster recovery replication does not set MapReduce Java options</i>	<i>2541</i>
<i>Kafka 1.2 CSD conflicts with CSD included in Cloudera Manager.....</i>	<i>2541</i>
<i>Recommission host does not deploy client configurations.....</i>	<i>2541</i>
<i>Hive on Spark is not supported in Cloudera Manager and CDH 5.4 and CDH 5.5.....</i>	<i>2542</i>
<i>Upgrade wizard incorrectly upgrades the Sentry DB.....</i>	<i>2542</i>
<i>Cloudera Manager does not correctly generate client configurations for services deployed using CSDs.....</i>	<i>2542</i>
<i>Solr, Oozie and HttpFS fail when KMS and TLS/SSL are enabled using self-signed certificates.....</i>	<i>2542</i>
<i>Cloudera Manager 5.3.1 upgrade fails if Spark standalone and Kerberos are configured.....</i>	<i>2542</i>
<i>Adding Key Trustee KMS 5.4 to Cloudera Manager 5.5 displays warning.....</i>	<i>2543</i>
<i>KMS and Key Trustee ACLs do not work in Cloudera Manager.....</i>	<i>2543</i>
<i>Exporting and importing Hue database sometimes times out after 90 seconds.....</i>	<i>2543</i>
<i>Changing the Key Trustee Server hostname requires editing <code>keytrustee.conf</code>.....</i>	<i>2543</i>

Cloudera Enterprise 5.x Release Notes

This guide contains release and download information for installers and administrators. It includes release notes as well as information about installation requirements, supported platforms, and version and download information. The guide also provides a release matrix that shows which major and minor release version of a product is supported with which release version of Cloudera Manager and CDH.

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

In an enterprise data hub, Cloudera Manager and CDH interact with several products such as Apache Accumulo, Apache Impala, Hue, Cloudera Search, and Cloudera Navigator. This guide provides information about which major and minor release version of a product is supported with which release version of CDH and Cloudera Manager.

Compatibility across different release versions of Cloudera Manager and CDH must be taken into account, especially when carrying out install/upgrade procedures.

JDK compatibility also varies across different Cloudera Manager and CDH versions. Certain versions of CDH 5 are compatible with both JDK 7 and JDK 8. In such cases, ensure all your services are deployed on the same major version. For example, you should not run Hadoop on JDK 7 while running Sqoop on JDK 8. Additionally, since Cloudera does not support mixed environments, all nodes in your cluster must be running the same major JDK version. Cloudera supports [Oracle](#) JDKs and, starting with Cloudera Enterprise 5.16, OpenJDK. For more information about the supported JDK versions, see [CDH and Cloudera Manager Supported JDK Versions](#) on page 33.

CDH Requirements for Cloudera Manager

Cloudera uses the following versioning convention: major.minor.maintenance. If a cluster runs Cloudera Manager 5.14.0, the major version is 5; the minor version is 14; and the maintenance version is 0.

The Cloudera Manager minor version must always be equal to or greater than the CDH minor version. Older versions of Cloudera Manager might not support features in newer versions of CDH.

For example, Cloudera Manager 5.12.0 can manage CDH 5.12.2 because the minor versions are equal. Cloudera Manager 5.12.0 cannot manage CDH 5.14.0 because the Cloudera Manager minor version, 12, is less than the CDH minor version, 14.

Important: Using Cloudera Manager 6.0.x to manage a CDH 5.15.x or CDH 5.16 cluster is not a supported configuration.

CDH and Cloudera Manager Supported Operating Systems

Note: Cloudera sometimes certifies OS releases between Cloudera Enterprise releases. When this occurs, the following tables are updated. This means that although an OS release might not be supported at the time of a Cloudera Enterprise release, it can be supported later.

CDH 5.x provides 64-bit packages for select versions of RHEL-compatible, SLES, Ubuntu, and Debian operating systems.

Important:

In order to be covered by Cloudera Support:

- All CDH hosts in a logical cluster must run on the same major OS release.
- Cloudera supports a *temporarily* mixed OS configuration during an OS upgrade project.
- Cloudera Manager must run on the same OS release as one of the CDH clusters it manages.

Cloudera recommends running the same minor release cross-cluster. However, the risk caused by running different minor OS releases is considered lower than the risk of running different major OS releases.

CDSW Gateway hosts may use RHEL/Centos 7.2, subject to some restrictions. See [Operating System Support for CDSW Gateway Hosts \(CDH 5.11 and higher only\)](#) on page 25

Points to note:

- Cloudera strongly discourages using RHEL 5 for new installations.
- RHEL / CentOS / OL 6.9 is supported in C5.7 and higher. In C5.7.x through 5.11.0, it has a [known cipher issue](#) (that is resolved in 5.11.1).
- Red Hat only supports specific upgrades from RHEL 6 to 7. Contact your OS vendor and review [What are the supported use cases for upgrading to RHEL 7?](#)
- SLES hosts running Cloudera Manager agents must use [SLES SDK 11 SP1](#).
- Cloudera does not support CDH cluster deployments in Docker containers.
- Cloudera is not responsible for developing or supporting SELinux policies. For more information, see [CDH and Cloudera Manager Networking and Security Requirements](#) on page 39.
- **Apache Kudu OS Requirements** - Kudu is supported only on a subset of the operating systems supported by CDH and Cloudera Manager. For details, refer [Supported Operating Systems \(Kudu 1.2.0 / CDH 5.10.x and higher\)](#) on page 47.
- **Cloudera Data Science Workbench OS Requirements** - Cloudera Data Science Workbench is supported only on a subset of the operating systems supported by CDH and Cloudera Manager. For details, refer the [CDSW documentation](#).

CDH and Cloudera Manager 5.16.x Supported Operating Systems

Operating System	Version (bold=new)
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK	7.9 , 7.8, 7.7, 7.6, 7.5, 7.4, 7.3, 7.2, 7.1 6.10, 6.9, 6.8, 6.7, 6.6, 6.5, 6.4 5.11, 5.10, 5.7
Oracle Linux (OL)	7.5, 7.4, 7.3, 7.2, 7.1 (UEK default) 6.10, 6.9, 6.8 (UEK R2, R4) 6.7, 6.6, 6.5 (UEK R2, R3) 6.4 (UEK R2) 5.11, 5.10, 5.7 (UEK R2)
SUSE Linux Enterprise Server	
SLES	12 SP5 , 12 SP4*, 12 SP3, 12 SP2, 12 SP1 11 SP4, 11 SP3
Ubuntu/Debian	
Ubuntu	16.04 LTS (Xenial) 14.04 LTS (Trusty)
Debian	8.9, 8.4, 8.2 (Jessie) 7.8, 7.1, 7.0 (Wheezy)

* SLES 12 SP4 certification includes a known issue when MariaDB is being used as the Cloudera Manager server database: use MariaDB 10.0 instead of the default MariaDB 10.2 provided in the operating system release.

See [OPSAPS-52340](#).

CDH and Cloudera Manager 5.15.x Supported Operating Systems

Operating System	Version (bold=new)
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK	7.9 , 7.8, 7.6, 7.5, 7.4, 7.3, 7.2, 7.1 6.10, 6.9, 6.8, 6.7, 6.6, 6.5, 6.4 5.11, 5.10, 5.7
Oracle Linux (OL)	7.5, 7.4, 7.3, 7.2, 7.1 (UEK default) 6.9, 6.8 (UEK R2, R4) 6.7, 6.6, 6.5 (UEK R2, R3) 6.4 (UEK R2) 5.11, 5.10, 5.7 (UEK R2)
SUSE Linux Enterprise Server	
SLES	12 SP3 , 12 SP2, 12 SP1 11 SP4, 11 SP3
Ubuntu/Debian	
Ubuntu	16.04 LTS (Xenial) 14.04 LTS (Trusty) 12.04 LTS (Precise)
Debian	8.9, 8.4, 8.2 (Jessie) 7.8, 7.1, 7.0 (Wheezy)

CDH and Cloudera Manager 5.14.x Supported Operating Systems

Operating System	Version (bold=new)
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK	7.6 , 7.5, 7.4, 7.3, 7.2, 7.1 6.10, 6.9, 6.8, 6.7, 6.6, 6.5, 6.4 5.11, 5.10, 5.7
Oracle Linux (OL)	7.5, 7.4, 7.3, 7.2, 7.1 (UEK default) 6.9, 6.8 (UEK R2, R4) 6.7, 6.6, 6.5 (UEK R2, R3) 6.4 (UEK R2) 5.11, 5.10, 5.7 (UEK R2)
SUSE Linux Enterprise Server	
SLES	12 SP2, 12 SP1 11 SP4, 11 SP3

Operating System Support for CDSW Gateway Hosts (CDH 5.11 and higher only)

Cloudera Data Science Workbench is supported only on a subset of the operating systems supported by CDH and Cloudera Manager. For the complete list, see [CDSW - Supported Operating Systems](#).

A CDSW Gateway host that is dedicated to running Cloudera Data Science Workbench must use an operating system supported by CDSW even if the remaining hosts in your cluster are running any of the other [supported operating systems](#). All hosts must run the same version of a [supported JDK](#).

CDH and Cloudera Manager 5.10.x Supported Operating Systems

Operating System	Version (bold=new)
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK <i>Max SE Linux support: 6.7</i>	7.3 , 7.2, 7.1 6.9, 6.8, 6.7, 6.6, 6.5, 6.4 5.11, 5.10, 5.7

CDH and Cloudera Manager 5.2.x Supported Operating Systems

Operating System	Version (bold=new)
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK	6.5, 6.4
<i>Max SE Linux support: 6.4</i>	5.7
Oracle Linux (OL)	6.5 (UEK R2, R3) 6.4 (UEK R2) 5.6 (UEK R2)
SUSE Linux Enterprise Server	
SLES	11 SP3, 11 SP2
Ubuntu/Debian	
Ubuntu	14.04 LTS (Trusty) 12.04 LTS (Precise)
Debian	7.1, 7.0 (Wheezy)

CDH and Cloudera Manager 5.1.x Supported Operating Systems

Operating System	Version (bold=new)
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK	6.5, 6.4
<i>Max SE Linux support: 6.4</i>	5.7
Oracle Linux (OL)	6.5 (UEK R2, R3) 6.4 (UEK R2) 5.6 (UEK R2)
SUSE Linux Enterprise Server	
SLES	11 SP3, 11 SP2
Ubuntu/Debian	
Ubuntu	12.04 LTS (Precise)

Operating System	Version (bold=new)
Debian	7.1, 7.0 (Wheezy)

CDH and Cloudera Manager 5.0.x Supported Operating Systems

Operating System	Version
Red Hat Enterprise Linux-compatible	
RHEL / CentOS / Oracle Linux RHCK	6.5, 6.4
<i>Max SE Linux support: 6.6</i>	5.7
Oracle Linux (OL)	6.5 (UEK R2, R3) 6.4 (UEK R2) 5.6 (UEK R2)
SUSE Linux Enterprise Server	
SLES	11 SP3, 11 SP2
Ubuntu/Debian	
Ubuntu	12.04 LTS (Precise)
Debian	7.1, 7.0 (Wheezy)

Filesystem Requirements

Supported Filesystems

The Hadoop Distributed File System (HDFS) is designed to run on top of an underlying filesystem in an operating system. Cloudera recommends that you use either of the following filesystems tested on the [supported operating systems](#):

- **ext3**: This is the most tested underlying filesystem for HDFS.
- **ext4**: This scalable extension of ext3 is supported in more recent Linux releases.

 **Important:** Cloudera does not support in-place upgrades from ext3 to ext4. Cloudera recommends that you format disks as ext4 before using them as data directories.

- **XFS**: This is the default filesystem in RHEL 7.

Kudu Filesystem Requirements - Kudu is supported on ext4 and XFS. Kudu requires a kernel version and filesystem that supports hole punching. Hole punching is the use of the `fallocate(2)` system call with the `FALLOC_FL_PUNCH_HOLE` option set. For more details, see Kudu troubleshooting - [Error During Hole Punch Test](#).

File Access Time

Linux filesystems keep metadata that record when each file was accessed. This means that even reads result in a write to the disk. To speed up file reads, Cloudera recommends that you disable this option, called `atime`, using the mount option in `/etc/fstab`:

```
/dev/sdb1 /data1 ext4 defaults,noatime 0
```

Apply the change without rebooting:

```
mount -o remount /data1
```

Filesystem Mount Options

The filesystem `mount` options have a `sync` option that allows you to write synchronously.

However, using the `sync` option will lead to poor performance for services that write data to disks, such as HDFS, YARN, Kafka and Kudu. In CDH most writes are already replicated. Therefore, having synchronous writes to disks is unnecessary, expensive, and not worth the added safety it provides.

NFS and NAS options must not be used as DataNode Data Directory mounts, not even when using Hierarchical Storage features.

CDH and Cloudera Manager Supported Databases

Cloudera Manager and CDH come packaged with an embedded PostgreSQL database for use in a non-production environment. The embedded PostgreSQL database is not supported in production environments. For production environments, you must configure your cluster to use external databases.

In most cases (but not all), Cloudera supports versions of MariaDB, MySQL and PostgreSQL that are native to each supported Linux distribution.

After installing a database, upgrade to the latest patch and apply appropriate updates. Available updates may be specific to the operating system on which it is installed.

Notes:

- Use UTF8 encoding for all custom databases.
- For MySQL 5.6 and 5.7, you must install the *MySQL-shared-compat* or *MySQL-shared* package. This is required for the Cloudera Manager Agent package installation.
- MySQL GTID-based replication is not supported.
- Both the Community and Enterprise versions of MySQL are supported, as well as MySQL configured by the AWS RDS service.
- Cloudera supports Oracle Exadata and RAC instances when they serve as backend databases for CDH components without high availability. Cloudera software is architected with the assumption of a single database instance, and supports normal operations between Cloudera Enterprise and Oracle Exadata (or RAC) in such an environment. Cloudera cannot reasonably test and certify on each strategy for each RDBMS. Cloudera expects HA solutions for RDBMS to be transparent to Cloudera software, and therefore are not supported and debugged by Cloudera. It is the responsibility of the customer to provision, configure, and manage the RDBMS HA deployment, so that Cloudera software behaves exactly as it would when interfacing with a single, non-HA service. Cloudera will support and help customers troubleshoot issues when a cluster has HA enabled. While diagnosing database-related problems in Cloudera components, customers may be required to temporarily disable or bypass HA mechanisms for troubleshooting purposes. If an HA-related issue is found, it is the responsibility of the customer to engage with the database vendor so that a solution to that issue can be found.

Important: When you restart processes, the configuration for each of the services is redeployed using information saved in the Cloudera Manager database. If this information is not available, your cluster cannot start or function correctly. You must schedule and maintain regular backups of the Cloudera Manager database to recover the cluster in the event of the loss of this database. For more information, see [Backing Up Databases](#).

Table 1:  MySQL Support across CM/CDH 5 Releases

MySQL	Cloudera Manager/CDH 5.10 - 5.16	Cloudera Manager/CDH 5.1 - 5.9	Cloudera Manager/CDH 5.0
5.1	✓	✓	✓
5.5	✓	✓	✓
5.6	✓	✓	
5.7	✓		

Table 2:  MariaDB Support across CM/CDH 5 Releases

MariaDB	Cloudera Manager/CDH 5.9 - 5.16	Cloudera Manager/CDH 5.5 - 5.8
5.5	✓	✓
10.0	✓	
10.2	Recommend 10.0 because of the known issue OPSAPS-52340 .	

Table 3:  PostgreSQL Support across CM/CDH 5 Releases

PostgreSQL	Cloudera Manager/CDH 5.16	Cloudera Manager/CDH 5.15	Cloudera Manager/CDH 5.13 - 5.14	Cloudera Manager/CDH 5.11 - 5.12	Cloudera Manager/CDH 5.5 - 5.10	Cloudera Manager/CDH 5.2 - 5.4	Cloudera Manager/CDH 5.1	Cloudera Manager/CDH 5.0
8.1	✓	✓	✓	✓	✓	✓	✓	✓
8.3	✓	✓	✓	✓	✓	✓	✓	✓
8.4	✓	✓	✓	✓	✓	✓	✓	✓
9.1	✓	✓	✓	✓	✓	✓	✓	✓
9.2	✓	✓	✓	✓	✓	✓	✓	
9.3	✓	✓	✓	✓	✓	✓		
9.4	✓	✓	✓	✓	✓			
9.5	✓	✓	✓	✓				
9.6	✓	✓	✓					
10	✓	✓ See Warning below.						

Warning: Navigator Audit Server and Navigator Metadata Server released in Cloudera Manager 5.15.0 and 5.15.1 do not support PostgreSQL version 10. If you upgrade Cloudera Manager to use PostgreSQL version 10, make arrangements to provide an earlier version of PostgreSQL for Navigator Audit Server and Navigator Metadata Server.

Table 4:  Oracle Support across CM/CDH 5 Releases

Oracle	Cloudera Manager/CDH 5.13 - 5.16	Cloudera Manager/CDH 5.6 - 5.12	Cloudera Manager/CDH 5.0 - 5.5
11g R2	✓	✓	✓
12c R1	✓	✓	
12c R2	✓		
18	Cloudera Manager/CDH 5.16 only. Requires Java 8 JDBC driver		
19	Cloudera Manager/CDH 5.16 only. Requires Java 8 JDBC driver		

CDH and Cloudera Manager Supported JDK Versions

Note: A Java optimization called [compressed oops](#) (ordinary object pointers) enables a 64-bit JVM to address heap sizes up to about 32 GB using 4-byte pointers. For larger heap sizes, 8-byte pointers are required. This means that a heap size slightly less than 32 GB can hold more objects than a heap size slightly more than 32 GB.

If you do not need more than 32 GB heap, set your heap size to 31GB or less to avoid this issue. If you need 32 GB or more, set your heap size to 48 GB or higher to account for the larger pointers. In general, for heap sizes above 32 GB, multiply the amount of heap you need by 1.5.

Only 64 bit JDKs are supported. [Oracle JDK 7](#) is supported across all versions of Cloudera Manager 5 and CDH 5. [Oracle JDK 8](#) is supported in Cloudera Enterprise 5.3.x and higher.

OpenJDK 8 is supported in Cloudera Enterprise 5.16.1 and higher.

Oracle JDK 9 is not supported in any Cloudera Manager or CDH version.

Unless specifically excluded, Cloudera supports later updates to a major JDK release from the release that support was introduced. For example, Oracle JDK 8u102 was released prior to CDH 5.9, but is supported in CDH 5.3 and higher because support for Oracle JDK 8 was added in CDH 5.3. Cloudera excludes or removes support for select Java updates when security is jeopardized.

Running CDH nodes within the same cluster on different JDK releases is not supported. JDK release across a cluster needs to match the patch level.

JDK 7

All JDK 7 updates, from the minimum required version, are supported in Cloudera Manager/CDH 5.0 and higher unless specifically excluded. Updates above the minimum that are not listed are supported but not tested.

The Cloudera Manager repository contains **Oracle JDK 1.7.0_67** (for [example](#)) and can be automatically installed during a new installation or an upgrade.

 **Warning:**

- For CDH versions 5.13.0 and higher, Sentry requires JDK 7u76 or higher due to [JDK-8055949](#).
- CDK 3.0 and higher Powered By Apache Kafka require JDK 8, and do not support JDK 7.
- Versions 2.2 and higher of CDS Powered By Apache Spark, which can be installed on CDH 5, require JDK 8.
- OpenJDK 7 is not supported.

Table 5: Oracle JDK 7 versions that are tested and recommended

Oracle JDK Version	Notes
1.7u80	Recommended / Latest version tested
1.7u75	Recommended
1.7u67	Recommended
1.7u55	Minimum required

JDK 8

All Oracle JDK 8 updates, from the minimum required version, are supported in Cloudera Manager/CDH 5.3 and higher unless specifically excluded. Updates above the minimum that are not listed are supported but not tested.

 **Warning:**

- Oracle JDK 8u40, 8u45, and 8u60 are not supported due to JDK issues impacting CDH functionality:
 - Oracle JDK 8u40 and 8u45 are affected by [JDK-8077155](#), which affects HTTP authentication for certain web UIs.
 - Oracle JDK 8u60 is incompatible with the AWS SDK, and causes problem with DistCP. For more information, see the [KB article](#).
- OpenJDK 1.8u181 and higher are supported in Cloudera Enterprise 5.16.1 and higher.
- CDK 3.0 and higher Powered By Apache Kafka require JDK 8, and do not support JDK 7.
- JDK 8u75 is supported but has a Known Issue: [Oozie Web Console returns 500 error when Oozie server runs on JDK 8u75 or higher](#) on page 2026.
- Versions 2.2 and higher of CDS Powered By Apache Spark, which can be installed on CDH 5, require JDK 8.

 **Important:**

For JDK 8u241 and higher versions running on Kerberized clusters, you must disable referrals by setting `sun.security.krb5.disableReferrals=true`.

For example, with OpenJDK 1.8.0u242:

1. Open `/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.242.b08-0.e17_7.x86_64/jre/lib/security/java.security` with a text editor.
2. Add `sun.security.krb5.disableReferrals=true` (it can be at the bottom of the file).
3. Add this property on each node that has the impacted JDK version.
4. Restart the applications using the JDK so the change takes effect.

For more information, see the [KB article](#).

Table 6: Oracle JDK 8 versions that are tested and recommended

Oracle JDK Version	Notes
1.8u181	Recommended / Latest version tested
1.8u162	Recommended / Latest version tested
1.8u144	Recommended
1.8u131	Recommended

Java Cryptography Extension (JCE) Unlimited Strength Jurisdiction Requirement

If you are using CentOS/Red Hat Enterprise Linux 5.6 or higher, or Ubuntu, you must install the [Java Cryptography Extension \(JCE\) Unlimited Strength Jurisdiction Policy File](#) on all cluster hosts (including gateway hosts). This is to ensure that JDK uses the same default encryption type (`aes256-cts`) as that used by Red Hat/CentOS operating systems, Kerberos, and the rest of the CDH cluster.

On a managed deployment, Cloudera Manager can install the JCE on hosts. For unmanaged deployments, use the installation instructions in the `README.txt` file included in `jce_policy-x.zip`.

- [JCE for Java SE 7](#)
- For JDK 1.8.0_150 (and lower) - [JCE for Java SE 8](#)

Enabling Unlimited Strength Encryption for JDK 1.8.0_151 (and later)

- As of **JDK 1.8.0_151**, unlimited strength encryption can be enabled using the `java.security` file as documented in the [JDK 1.8.0_151 release notes](#). You do not need to install the JCE policy files.
- As of **JDK 1.8.0_161**, unlimited strength encryption has been [enabled by default](#). No further action is required.

Cloudera Manager Supported Browsers

The Cloudera Manager Admin Console, which you use to install, configure, manage, and monitor services, supports the latest version of the following browsers:

- Mozilla Firefox
- Google Chrome
- Internet Explorer
- Safari.

Hue Supported Browsers

Hue works with the two most recent [LTS](#) (long term support) or [ESR](#) (extended support release) browsers. Cookies and JavaScript must be on.

- **Chrome:** [Version history](#)
- **Firefox:** [Version history](#)
- **Internet Explorer:** [Version history](#)
- **Safari** (Mac only): [Version history](#)
- **Windows Edge**: [Version history](#)

Hue can display in older, and other, browsers, but you might not have access to all of its features.

Important: To see all icons in the Hue Web UI, users with IE and HTTPS must add a Load Balancer.

CDH and Cloudera Manager Supported Transport Layer Security Versions

The following components are supported by the indicated versions of Transport Layer Security (TLS):

Table 8: Components Supported by TLS

Component	Role	Name	Port	Version
Cloudera Manager	Cloudera Manager Server		7182	TLS 1.2
Cloudera Manager	Cloudera Manager Server		7183	TLS 1.2
			9099	TLS 1.2
Flume		Avro Source/Sink		TLS 1.2
Flume		Flume HTTP Source/Sink		TLS 1.2
HBase	Master	HBase Master Web UI Port	60010	TLS 1.2
HDFS	NameNode	Secure NameNode Web UI Port	50470	TLS 1.2
HDFS	Secondary NameNode	Secure Secondary NameNode Web UI Port	50495	TLS 1.2
HDFS	HttpFS	REST Port	14000	TLS 1.1, TLS 1.2
Hive	HiveServer2	HiveServer2 Port	10000	TLS 1.2
Hue	Hue Server	Hue HTTP Port	8888	TLS 1.2
Impala	Impala Daemon	Impala Daemon Beeswax Port	21000	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Impala	Impala Daemon	Impala Daemon HiveServer2 Port	21050	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest

Component	Role	Name	Port	Version
				supported version, TLS 1.2.
Impala	Impala Daemon	Impala Daemon Backend Port	22000	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Impala	Impala StateStore	StateStore Service Port	24000	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Impala	Impala Daemon	Impala Daemon HTTP Server Port	25000	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Impala	Impala StateStore	StateStore HTTP Server Port	25010	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Impala	Impala Catalog Server	Catalog Server HTTP Server Port	25020	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Impala	Impala Catalog Server	Catalog Server Service Port	26000	TLS 1.0, TLS 1.1, TLS 1.2 We recommend that clients use the highest supported version, TLS 1.2.
Oozie	Oozie Server	Oozie HTTPS Port	11443	TLS 1.1, TLS 1.2
Solr	Solr Server	Solr HTTP Port	8983	TLS 1.1, TLS 1.2
Solr	Solr Server	Solr HTTPS Port	8985	TLS 1.1, TLS 1.2
Spark	History Server		18080	TLS 1.2
YARN	ResourceManager	ResourceManager Web Application HTTP Port	8090	TLS 1.2
YARN	JobHistory Server	MRv1 JobHistory Web Application HTTP Port	19890	TLS 1.2

Cloudera Manager Resource Requirements

Cloudera Manager requires the following resources:

- **Disk Space**
 - **Cloudera Manager Server**
 - 5 GB on the partition hosting `/var`.
 - 500 MB on the partition hosting `/usr`.
 - For parcels, the space required depends on the number of parcels you download to the Cloudera Manager Server and distribute to Agent hosts. You can download multiple parcels of the same product, of different versions and different builds. If you are managing multiple clusters, only one parcel of a product/version/build/distribution is downloaded on the Cloudera Manager Server—not one per cluster. In the local parcel repository on the Cloudera Manager Server, the approximate sizes of the various parcels are as follows:
 - CDH 5 (which includes Impala and Search) - 1.5 GB per parcel (packed), 2 GB per parcel (unpacked)
 - Impala - 200 MB per parcel
 - Cloudera Search - 400 MB per parcel
 - **Cloudera Management Service** -The Host Monitor and Service Monitor databases are stored on the partition hosting `/var`. Ensure that you have at least 20 GB available on this partition.
 - **Agents** - On Agent hosts, each unpacked parcel requires about three times the space of the downloaded parcel on the Cloudera Manager Server. By default, unpacked parcels are located in `/opt/cloudera/parcels`.
- **RAM** - 4 GB is recommended for most cases and is required when using Oracle databases. 2 GB might be sufficient for non-Oracle deployments with fewer than 100 hosts. However, to run the Cloudera Manager Server on a machine with 2 GB of RAM, you must tune down its maximum heap size (by modifying `-Xmx` in `/etc/default/cloudera-scm-server`). Otherwise the kernel might kill the Server for consuming too much RAM.
- **Python** - Cloudera Manager requires Python 2.4 or higher (but is not compatible with Python 3.0 or higher). Hue in CDH 5 and package installs of CDH 5 require Python 2.6 or 2.7. All supported operating systems include Python version 2.4 or higher. Cloudera Manager is compatible with Python 2.4 through the latest version of Python 2.x. Cloudera Manager does not support Python 3.0 and higher.
- **Perl** - Cloudera Manager requires [perl](#).
- **python-psycopg2 package** - Cloudera Manager 5.8 and higher has a new dependency on the package `python-psycopg2`. This package is not available in standard SLES 11 and SLES 12 repositories. You need to add this repository or install it manually to any machine that runs the Cloudera Manager Agent before you install or upgrade Cloudera Manager.

If the Cloudera Manager Server and Agent run on the same host, install the Cloudera Manager Server first and then add the `python-psycopg2` repository or package. After adding the repository or package, install the Cloudera Manager Agent.

Download the `python-psycopg2` repository or package from the following URL by selecting the correct SLES version: <https://software.opensuse.org/package/python-psycopg2>.

- **iproute package** - Cloudera Manager 5.12 and higher has a new dependency on the `iproute` package. Any machine that runs the Cloudera Manager Agent requires the package. Which version you need depends on the operating system:

Table 9: iproute package

Operating System	iproute version
CentOS 6.x	iproute-2.6
CentOS 7.x	iproute-3.10

Operating System	iproute version
RHEL 6.x	iproute-2.6
RHEL 7.x	iproute-3.10
SLES 11 SP3	iproute2-2.6
SLES 11 SP4	iproute2-3.0
SLES 12 and 12 SP1	iproute2-3.12
SLES 12 SP4	iproute2-4.4

CDH and Cloudera Manager Networking and Security Requirements

The hosts in a Cloudera Manager deployment must satisfy the following networking and security requirements:

- **Networking Protocols Support**

CDH requires IPv4. IPv6 is not supported and must be disabled.

Note: Contact your OS vendor for help disabling IPv6.

See also [Configuring Network Names](#).

- **Multihoming Support**

– Multihoming CDH or Cloudera Manager is not supported outside specifically certified Cloudera partner appliances. Cloudera finds that current Hadoop architectures combined with modern network infrastructures and security practices remove the need for multihoming. Multihoming, however, is beneficial internally in appliance form factors to take advantage of high-bandwidth InfiniBand interconnects.

Although some subareas of the product may work with unsupported custom multihoming configurations, there are known issues with multihoming. In addition, unknown issues may arise because multihoming is not covered by our test matrix outside the Cloudera-certified partner appliances.

- **Entropy**

Data at rest encryption requires sufficient [entropy](#) to ensure randomness.

See entropy requirements in [Data at Rest Encryption Requirements](#) on page 61.

- Cluster hosts must have a working network name resolution system and correctly formatted `/etc/hosts` file. All cluster hosts must have properly configured forward and reverse host resolution through DNS. The `/etc/hosts` files must:
 - Contain consistent information about hostnames and IP addresses across all hosts
 - Not contain uppercase hostnames
 - Not contain duplicate IP addresses

Cluster hosts must not use aliases, either in `/etc/hosts` or in configuring DNS. A properly formatted `/etc/hosts` file should be similar to the following example:

```
127.0.0.1 localhost.localdomain localhost
192.168.1.1 cluster-01.example.com cluster-01
192.168.1.2 cluster-02.example.com cluster-02
192.168.1.3 cluster-03.example.com cluster-03
```

- In most cases, the Cloudera Manager Server must have SSH access to the cluster hosts when you run the installation or upgrade wizard. You must log in using a root account or an account that has password-less sudo permission.

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

For authentication during the installation and upgrade procedures, you must either enter the password or upload a public and private key pair for the root or sudo user account. If you want to use a public and private key pair, the public key must be installed on the cluster hosts before you use Cloudera Manager.

Cloudera Manager uses SSH only during the initial install or upgrade. Once the cluster is set up, you can disable root SSH access or change the root password. Cloudera Manager does not save SSH credentials, and all credential information is discarded when the installation is complete.

- If [single user mode](#) is not enabled, the Cloudera Manager Agent runs as root so that it can make sure the required directories are created and that processes and files are owned by the appropriate user (for example, the `hdfs` and `mapred` users).
- No blocking is done by Security-Enhanced Linux (SELinux).

Note: Cloudera Enterprise, with the exception of Cloudera Navigator Encrypt, is supported on platforms with Security-Enhanced Linux (SELinux) enabled and in `enforcing` mode. Cloudera is not responsible for SELinux policy development, support, or enforcement. If you experience issues running Cloudera software with SELinux enabled, contact your OS provider for assistance.

If you are using SELinux in `enforcing` mode, Cloudera Support can request that you disable SELinux or change the mode to `permissive` to rule out SELinux as a factor when investigating reported issues.

- No blocking by iptables or firewalls; port 7180 must be open because it is used to access Cloudera Manager after installation. Cloudera Manager communicates using specific ports, which must be open.
- For RHEL and CentOS, the `/etc/sysconfig/network` file on each host must contain the hostname you have just set (or verified) for that host.
- Cloudera Manager and CDH use several user accounts and groups to complete their tasks. The set of user accounts and groups varies according to the components you choose to install. Do not delete these accounts or groups and do not modify their permissions and rights. Ensure that no existing systems prevent these accounts and groups from functioning. For example, if you have scripts that delete user accounts not in a whitelist, add these accounts to the list of permitted accounts. Cloudera Manager, CDH, and managed services create and use the following accounts and groups:

Table 10: Users and Groups

Component (Version)	Unix User ID	Groups	Functionality
Cloudera Manager (all versions)	<code>cloudera-scm</code>	<code>cloudera-scm</code>	Clusters managed by Cloudera Manager run Cloudera Manager Server, monitoring roles, and other Cloudera Server processes as <code>cloudera-scm</code> . Requires keytab file named <code>cmf.keytab</code> because name is hard-coded in Cloudera Manager.
Apache Accumulo (Accumulo 1.4.3 and higher)	<code>accumulo</code>	<code>accumulo</code>	Accumulo processes run as this user.
Apache Avro	<code>~</code>	<code>~</code>	No special user:group.
Apache Flume	<code>flume</code>	<code>flume</code>	The sink that writes to HDFS as user must have write privileges.
Apache HBase	<code>hbase</code>	<code>hbase</code>	The Master and the RegionServer processes run as this user.

Component (Version)	Unix User ID	Groups	Functionality
HDFS	hdfs	hdfs, hadoop	The NameNode and DataNodes run as this user, and the HDFS root directory as well as the directories used for edit logs should be owned by it.
Apache Hive	hive	hive	The HiveServer2 process and the Hive Metastore processes run as this user. A user must be defined for Hive access to its Metastore DB (for example, MySQL or Postgres) but it can be any identifier and does not correspond to a Unix uid. This is <code>javax.jdo.option.ConnectionUserName</code> in <code>hive-site.xml</code> .
Apache HCatalog	hive	hive	The WebHCat service (for REST access to Hive functionality) runs as the <code>hive</code> user.
HttpFS	httpfs	httpfs	The HttpFS service runs as this user. See HttpFS Security Configuration for instructions on how to generate the merged <code>httpfs-http.keytab</code> file.
Hue	hue	hue	Hue services run as this user.
Hue Load Balancer (Cloudera Manager 5.5 and higher)	apache	apache	The Hue Load balancer has a dependency on the <code>apache2</code> package that uses the <code>apache</code> user name. Cloudera Manager does not run processes using this user ID.
Impala	impala	impala, hive	Impala services run as this user.
Apache Kafka (CDK 1.2.0 Powered By Apache Kafka)	kafka	kafka	Kafka services run as this user.
Java KeyStore KMS (CDH 5.2.1 and higher)	kms	kms	The Java KeyStore KMS service runs as this user.
Key Trustee KMS (CDH 5.3 and higher)	kms	kms	The Key Trustee KMS service runs as this user.
Key Trustee Server (CDH 5.4 and higher)	keytrustee	keytrustee	The Key Trustee Server service runs as this user.
Kudu	kudu	kudu	Kudu services run as this user.
Llama	llama	llama	Llama runs as this user.
Apache Mahout	~	~	No special users.
MapReduce	mapred	mapred, hadoop	Without Kerberos, the JobTracker and tasks run as this user. The <code>LinuxTaskController</code> binary is owned by this user for Kerberos.
Apache Oozie	oozie	oozie	The Oozie service runs as this user.
Parquet	~	~	No special users.

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

Component (Version)	Unix User ID	Groups	Functionality
Apache Pig	~	~	No special users.
Cloudera Search	solr	solr	The Solr processes run as this user.
Apache Spark	spark	spark	The Spark History Server process runs as this user.
Apache Sentry	sentry	sentry	The Sentry service runs as this user.
Apache Sqoop	sqoop	sqoop	This user is only for the Sqoop1 Metastore, a configuration option that is not recommended.
Apache Sqoop2	sqoop2	sqoop, sqoop2	The Sqoop2 service runs as this user.
Apache Whirr	~	~	No special users.
YARN	yarn	yarn, hadoop	Without Kerberos, all YARN services and applications run as this user. The LinuxContainerExecutor binary is owned by this user for Kerberos.
Apache ZooKeeper	zookeeper	zookeeper	The ZooKeeper processes run as this user. It is not configurable.

Product Compatibility Matrix for Apache Accumulo

This matrix contains compatibility information across versions of Apache Accumulo, and CDH and Cloudera Manager. For detailed information on each release, see [Apache Accumulo documentation](#).

Product	Lowest supported Cloudera Manager Version	Lowest supported CDH Version	Lowest supported Impala Version	Lowest supported Search Version	Integrated into CDH
Accumulo 1.7.2	Cloudera Manager 5.0.0	CDH 5.5.0	Not Supported	Not Supported	No
Accumulo 1.6.0	Cloudera Manager 5.0.0	CDH 4.6.0 - 4.x.x, CDH 5.1.0	Not Supported	Not Supported	No
Accumulo 1.4.4	Cloudera Manager 5.0.0	CDH 4.5.0 (Not for use with CDH 5)	Not Supported	Not Supported	No
Accumulo 1.4.3	Cloudera Manager 5.0.0	CDH 4.3.0 (Not for use with CDH 5)	Not Supported	Not Supported	No

Product Compatibility Matrix for Apache Impala

This matrix contains compatibility information across versions of Impala and CDH/Cloudera Manager. For detailed information on each release, see [the Impala documentation](#).

Product	Supported Cloudera Manager Versions	Supported CDH Versions	Integrated into CDH
Impala 2.12.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.15.x	CDH 5.15.x
Impala 2.11.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.14.x	CDH 5.14.x

Product	Supported Cloudera Manager Versions	Supported CDH Versions	Integrated into CDH
Impala 2.10.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.13.x	CDH 5.13.x
Impala 2.9.x (plus additional patches) for CDH 5.12.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.12.x	CDH 5.12.x
Impala 2.8.x (plus additional patches) for CDH 5.11.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.11.x	CDH 5.11.x
Impala 2.8.x (plus a few minor patches) for CDH 5.10.x; although version string still says Impala 2.7	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.10.x	CDH 5.10.x
Impala 2.7.x for CDH 5.9.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.9.x	CDH 5.9.x
Impala 2.6.x for CDH 5.8.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.8.x	CDH 5.8.x
Impala 2.5.x for CDH 5.7.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.7.x	CDH 5.7.x
Impala 2.4.x for CDH 5.6.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.6.x	CDH 5.6.x
Impala 2.3.x for CDH 5.5.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.5.x	CDH 5.5.x
Impala 2.2.x for CDH 5.4.x	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.4.x	CDH 5.4.x
Impala 2.2.0	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.4.0	CDH 5.4.0
Impala 2.1.8	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.10	CDH 5.3.10
Impala 2.1.7	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.9	CDH 5.3.9
Impala 2.1.6	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.8	CDH 5.3.8
Impala 2.1.5	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.6	CDH 5.3.6
Impala 2.1.4	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.4 and CDH 5.3.5	CDH 5.3.4 and CDH 5.3.5
Impala 2.1.3	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.3	CDH 5.3.3
Impala 2.1.2	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.2	CDH 5.3.2

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

Product	Supported Cloudera Manager Versions	Supported CDH Versions	Integrated into CDH
Impala 2.1.1	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.1	CDH 5.3.1
Impala 2.1.0	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.3.0	CDH 5.3.0
Impala 2.0.5	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.2.6	CDH 5.2.6
Impala 2.0.4	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.2.5	CDH 5.2.5
Impala 2.0.3	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.2.4	CDH 5.2.4
Impala 2.0.2	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.2.3	CDH 5.2.3
Impala 2.0.1	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.2.1	CDH 5.2.1
Impala 2.0.0	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.2.0	CDH 5.2.0
Impala 1.4.4	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.1.5	CDH 5.1.5
Impala 1.4.3	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.1.4	CDH 5.1.4
Impala 1.4.2	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.1.3	CDH 5.1.3
Impala 1.4.1	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.1.2	CDH 5.1.2
Impala 1.4.0	Cloudera Manager 5.0.0 - 5.x.x; Recommended: Cloudera Manager 5.1.0	CDH 5.1.0	CDH 5.1.0
Impala 1.3.3	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.0.5	CDH 5.0.5
Impala 1.3.2	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.0.4	CDH 5.0.4
Impala 1.3.1	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.0.1 - 5.0.x	CDH 5.0.1
Impala 1.3.0	Cloudera Manager 5.0.0 - 5.x.x	CDH 5.0.0	CDH 5.0.0

Product Compatibility Matrix for CDK Powered By Apache Kafka

CDK Powered By Apache Kafka is currently distributed as a package and in a parcel that is independent of the CDH parcel. The parcel integrates with Cloudera Manager using a Custom Service Descriptor (CSD). Using the latest features

of Kafka sometimes requires a newer version of Cloudera Manager and/or CDH that supports the feature. This matrix describes the compatibility between CDK Powered by Apache Kafka and Cloudera Manager and CDH.

For the latest documentation, see [Kafka Documentation](#).

CDK Powered By Apache Kafka Version	Upstream Kafka Version	Minimum Supported CM Version	Minimum Supported CDH Version (No Security)	Minimum Supported CDH Version (with Sentry)	Feature Notes
4.1.0	2.2.1	5.13.0	CDH 5.13.0	CDH 5.13.0	
4.0.0	2.1.0	5.13.0	CDH 5.13.0	CDH 5.13.0	
3.1.1	1.0.1	5.13.0	CDH 5.13.0	CDH 5.13.0	
3.1.0	1.0.1	5.13.0	CDH 5.13.0	CDH 5.13.0	Sentry-HA Supported
3.0.0	0.11.0	5.13.0	CDH 5.13.0	CDH 5.13.0	Sentry-HA not supported
2.2.x	0.10.2	5.9.0	CDH 5.4.0	CDH 5.9.0	
2.1.x	0.10.0	5.9.0	CDH 5.4.0	CDH 5.9.0	Sentry Authorization
2.0.x	0.9.0	5.5.3	CDH 5.4.0	CDH 5.4.0	Enhanced Security

Kafka Client-Broker Compatibility across Kafka Versions

Maintaining compatibility across different Kafka clients and brokers is a common issue. This can occur as part of any of the following scenarios:

- Upgrading your Kafka cluster without upgrading your Kafka clients
- Using a third-party application that produces to or consumes from your Kafka cluster
- Having a client program communicating with two or more Kafka clusters (e.g. consuming from one cluster and producing to a different cluster)
- Using Flume or Spark as a Kafka consumer

In these cases, it is important to understand client/broker compatibility across Kafka versions. Here are general rules that apply:

1. Newer Kafka brokers can talk to older Kafka clients. The reverse is **not** true.
2. Changes in either the major part or the minor part of the upstream version *major.minor* determines whether the client and broker are compatible.

As a result, the general pattern for upgrading Kafka from version A to version B is:

1. Change Kafka server.properties to refer to version A.
2. Upgrade the brokers to version B and restart the cluster.
3. Upgrade the clients to version B.
4. After all the clients are upgraded, change the properties from the first step to version B and restart the cluster.

Kafka Client Versions Used by Apache Flume in CDH

Flume has an embedded Kafka client which it uses to talk to Kafka clusters. Since the generally accepted practice is to have the broker running the same or newer version as the client, a CDH Flume version requires being matched to a minimum Kafka version. This matrix lists the CDK Powered By Apache Kafka (CDK) client versions used by Apache Flume

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

in CDH, as well as the underlying Apache Kafka base version. For more information about CDK, see the [Cloudera Distribution of Kafka Documentation](#).

Flume CDH Version	Minimum Supported CDK Client Version (Remote or Local)	Embedded Kafka Client Base Version
5.16.x	2.2.0	0.10.2.0
5.15.x	2.2.0	0.10.2.0
5.14.x	2.2.0	0.10.2.0
5.13.x	2.0.2	0.9.0.0
5.12.x	2.0.2	0.9.0.0
5.11.x	2.0.2	0.9.0.0
5.10.x	2.0.2	0.9.0.0
5.9.x	2.0.2	0.9.0.0
5.8.x	2.0.0	0.9.0.0
5.7.x	2.0.0	0.9.0.0

Kafka Client Versions used by Apache Spark in CDH

Spark maintains two embedded Kafka clients and can be configured to use either one. For information on compatibility with Kafka brokers, refer to the appropriate entry in the table below.

CDS Version	Embedded Kafka Client (Choose based on Kafka cluster)	Minimum Apache Kafka Broker Version	Minimum CDK Broker Version	Upstream Integration Guide	API Stability
CDS 2.4	spark-streaming-kafka-0.10	0.10.0	Kafka 2.1	Spark 2.4 + Kafka 0.10	Experimental
	spark-streaming-kafka-0.8	0.8.2.1	Kafka 2.0	Spark 2.4 + Kafka 0.8	Stable
CDS 2.3	spark-streaming-kafka-0.10	0.10.0	Kafka 2.1	Spark 2.3 + Kafka 0.10	Experimental

Product Compatibility Matrix for Apache Kudu

This matrix contains compatibility information across versions of Kudu and CDH/Cloudera Manager. Starting with Apache Kudu 1.5.0 / CDH 5.13.0, Kudu is fully integrated into CDH and ships as part of the CDH parcel and packages.

Documentation for Kudu 1.5.0 / CDH 5.13.x (and higher) can be found at [Apache Kudu Guide](#). Documentation for all lower versions can be found at [Apache Kudu 1.4.0 \(and lower\)](#).

Product	Feature	Lowest Supported Cloudera Manager Version	Supported CDH Versions	Integrated into CDH
Kudu 1.7.0 / CDH 5.15.x	Fully integrated into the CDH 5.15 parcel and packages.	Cloudera Manager 5.15.0	CDH 5.15.x	Yes
Kudu 1.6.0 / CDH 5.14.x	Fully integrated into the CDH 5.14 parcel and packages.	Cloudera Manager 5.14.0	CDH 5.14.x	Yes
Kudu 1.5.0 / CDH 5.13.x	Fully integrated into the CDH 5.13 parcel and packages.	Cloudera Manager 5.13.0	CDH 5.13.x	Yes
Kudu 1.4.0 / CDH 5.12.x	Available as a CSD within Cloudera Manager.	Cloudera Manager 5.12.0	CDH 5.12.x	No
Kudu 1.3.0 / CDH 5.11.x	Available as a CSD within Cloudera Manager.	Cloudera Manager 5.11.0	CDH 5.11.x	No
Kudu 1.2.0 / CDH 5.10.x	Distributed both as package and parcel. Kudu's first generally available (GA) release that is supported on Cloudera Manager and CDH 5.10.x clusters.	Cloudera Manager 5.10.0	CDH 5.10.x	No
Kudu 1.1.x (and lower) - Beta	Public beta releases that are not commercially supported on CDH clusters.	N/A	N/A	No

Supported Operating Systems (Kudu 1.2.0 / CDH 5.10.x and higher)

Starting in CDH 5.13, Kudu supports the same OSs and versions as Cloudera Manager and CDH with the following exceptions.

- RHEL 5 is not supported.
- Ubuntu 12 is not supported.
- Debian 7 is not supported.
- macOS
 - 10.10 Yosemite, 10.11 El Capitan, and 10.12 Sierra are supported.
 - Pre-built macOS packages are not provided.
- Microsoft Windows is not supported.

For a complete list of supported versions, see [CDH and Cloudera Manager Supported Operating Systems](#) on page 20.

Filesystem Requirements

Kudu is supported on ext4 and XFS. Kudu requires a kernel version and filesystem that supports hole punching. Hole punching is the use of the `fallocate(2)` system call with the `FALLOC_FL_PUNCH_HOLE` option set. For more details, see Kudu troubleshooting - [Error During Hole Punch Test](#).

nscd Recommendation

Although not a strict requirement, it's highly recommended that you use `nscd` to cache both DNS name resolution and static name resolution for Kudu. See [Troubleshooting Kudu](#) for more information.

JDK Requirements

- JDK 7
- JDK 8

Note that Spark 2.2 (and higher) requires Java 8 at runtime even though the Kudu Spark 2.x integration is Java 7 compatible. Spark 2.2 is the default dependency version as of Kudu 1.5.0 / CDH 5.13.

Hardware Requirements

- Kudu currently requires a CPU that supports the SSSE3 and SSE4.2 instruction sets. If you are to run Kudu inside a VM, enable SSE4.2 pass-through to pass through SSE4.2 support into the VM.
- One or more hosts to run Kudu masters. You should have either one master (provides no fault tolerance), three masters (can tolerate one failure), or five masters (can tolerate two failures).
- One or more hosts to run Kudu tablet servers. With replication, a minimum of three tablet servers is necessary.
- **Storage** - If solid state storage is available, storing Kudu WALs on such high-performance media might significantly improve latency when Kudu is configured for its highest durability levels.

Product Compatibility Matrix for Cloudera Navigator

This matrix contains compatibility information across versions of Cloudera Navigator, Cloudera Manager, and CDH. For detailed information on each release, see [Cloudera Navigator documentation](#).

Note:

Cloudera Navigator requires HiveServer2 for complete governance Hive queries. Cloudera Navigator does not capture audit events for queries that are run on HiveServer1/Hive CLI, and lineage is not captured for certain types of operations that are run on HiveServer1.

[HiveServer1 and Hive CLI are deprecated in CDH 5](#). If you use Cloudera Navigator to capture auditing, lineage, and metadata for Hive operations, upgrade to HiveServer2 if you have not done so already.

Cloudera Navigator Supported Databases

Cloudera Navigator supports the same databases as CDH and Cloudera Manager. For more information, see [CDH and Cloudera Manager Supported Databases](#) on page 31.

Cloudera Navigator Supported Browsers

The Cloudera Navigator console supports the following browsers:

- Mozilla Firefox 24 and higher
- Google Chrome 36 and higher
- Internet Explorer 11
- Safari 5 and higher

Cloudera Navigator Supported CDH and Managed Service Versions

This section describes the CDH and managed service versions supported by the Cloudera Navigator auditing and metadata features.

Cloudera Navigator Auditing

This section describes the audited operations and service versions supported by Cloudera Navigator auditing.

Component	Operations (For details, see Service Audit Events).	Minimum Supported Service Version
HDFS	<ul style="list-style-type: none"> • Operations that access or modify a file's or directory's data or metadata • Operations denied due to lack of privileges 	CDH 5.0.0
HBase	<ul style="list-style-type: none"> • In simple authentication mode, if the HBase Secure RPC Engine property is <code>false</code> (the default), the username in log events is <code>UNKNOWN</code>. To see a meaningful username: <ol style="list-style-type: none"> 1. Click the HBase service. 2. Click the Configuration tab. 3. Select Service-wide > Security. 4. Set the HBase Secure RPC Engine property to <code>true</code>. 5. Save the change and restart the service. 	CDH 5.0.0
Hive	<ul style="list-style-type: none"> • Operations (except grant, revoke, and metadata access only) sent to HiveServer2 • Operations denied due to lack of privileges <p>Limitations:</p> <ul style="list-style-type: none"> • Actions taken against Hive using the Hive CLI are <i>not</i> audited. Therefore if you have enabled auditing you should disable the Hive CLI to prevent actions against Hive that are not audited. • In simple authentication mode, the username in log events is the username passed in the HiveServer2 connect command. If you do not pass a username in the connect command, the username in log events is <code>anonymous</code>. 	CDH 5.0.0
Hue	<ul style="list-style-type: none"> • Operations (except grant, revoke, and metadata access only) sent through the Beeswax Server • User operations such as log in, log out, add and remove user, add and remove LDAP group, add and remove user from LDAP group 	CDH 5.0.0

Component	Operations (For details, see Service Audit Events).	Minimum Supported Service Version
Impala	<ul style="list-style-type: none"> Queries denied due to lack of privileges Queries that pass analysis 	Impala 1.3.0 with CDH 5.0.0
Navigator Metadata Server	<ul style="list-style-type: none"> Viewing and changing audit reports Viewing and changing authorization configurations Viewing and changing metadata Viewing and changing policies Viewing and changing saved searches 	Cloudera Navigator 2.3
Sentry	<ul style="list-style-type: none"> Operations sent to the HiveServer2 and Hive Metastore Server roles and Impala service Adding and deleting roles, assigning roles to groups and removing roles from groups, creating and deleting privileges, granting and revoking privileges Operations denied due to lack of privileges <p>You do not directly configure the Sentry service for auditing. Instead, when you configure the Hive and Impala services for auditing, grant, revoke, and metadata operations appear in the Hive or Impala service audit logs.</p>	CDH 5.1.0
Solr	<ul style="list-style-type: none"> Index creation and deletion Schema and configuration file modification Index, service, document tag access 	CDH 5.4.0

Cloudera Navigator Metadata

This section describes the CDH and managed service versions supported by the Cloudera Navigator metadata feature.

Component	Minimum Supported Version
HDFS. However, federated HDFS is <i>not supported</i> .	CDH 5.0.0
Hive	CDH 5.0.0
Impala	CDH 5.4.0
MapReduce	CDH 5.0.0
Oozie. Supported actions: <ul style="list-style-type: none"> 2.4 - map-reduce, pig, hive, hive2, sqoop 2.3 and lower - map-reduce, pig, hive, sqoop Unsupported actions include email, shell, and ssh.	CDH 5.0.0
Pig	CDH 5.0.0
Spark	CDH 5.4.0
Sqoop 1. All Cloudera connectors are supported.	CDH 5.0.0
YARN	CDH 5.0.0

Data at Rest Encryption Requirements

Encryption comprises several components, each with its own requirements.

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

Data at rest encryption protection can be applied at a number of levels within Hadoop:

- OS filesystem-level
- Network-level
- HDFS-level (protects both data at rest and in transit)

This section contains the various hardware and software requirements for all encryption products used for Data at Rest Encryption.

For more information on supported operating systems, see [Product Compatibility Matrix for Cloudera Navigator Encryption](#) on page 63.

For more information on the components, concepts, and architecture for encrypting data at rest, see [Encrypting Data at Rest](#).

Entropy Requirements

See [Entropy Requirements](#).

Cloudera Manager Requirements

Installing and managing Key Trustee Server using Cloudera Manager requires Cloudera Manager 5.4.0 and higher. Key Trustee Server does not require Cloudera Navigator Audit Server or Metadata Server.

umask Requirements

Key Trustee Server installation requires the default `umask` of `0022`.

Network Requirements

For new Key Trustee Server installations (5.4.0 and higher) and migrated upgrades (see [Migrate Apache Web Server to CherryPy](#) for more information), Key Trustee Server requires the following TCP ports to be opened for inbound traffic:

- 11371
Clients connect to this port over HTTPS.
- 11381 (PostgreSQL)
The passive Key Trustee Server connects to this port for database replication.

For upgrades that are not migrated to the CherryPy web server, the pre-upgrade port settings are preserved:

- 80
Clients connect to this port over HTTP to obtain the Key Trustee Server public key.
- 443 (HTTPS)
Clients connect to this port over HTTPS.
- 5432 (PostgreSQL)
The passive Key Trustee Server connects to this port for database replication.

TLS Certificate Requirements

To ensure secure network traffic, Cloudera recommends obtaining Transport Layer Security (TLS) certificates specific to the hostname of your Key Trustee Server. To obtain the certificate, generate a Certificate Signing Request (CSR) for the fully qualified domain name (FQDN) of the Key Trustee Server host. The CSR must be signed by a trusted Certificate Authority (CA). After the certificate has been verified and signed by the CA, the Key Trustee Server TLS configuration requires:

- The CA-signed certificate
- The private key used to generate the original CSR
- The intermediate certificate/chain file (provided by the CA)

Cloudera recommends not using self-signed certificates. If you use self-signed certificates, you must use the `--skip-ssl-check` parameter when registering Navigator Encrypt with the Key Trustee Server. This skips TLS hostname validation, which safeguards against certain network-level attacks. For more information regarding insecure mode, see [Table 1](#).

Product Compatibility Matrix for Cloudera Navigator Encryption

Cloudera Navigator encryption comprises several components.

Although the version numbers differ between some Cloudera Navigator encryption components and Cloudera Enterprise, the encryption component releases are generally coordinated with Cloudera Enterprise releases. See the following table for information on which component versions correspond with a given Cloudera Enterprise release.

Note: The following table is not a compatibility matrix. It lists the Cloudera Navigator encryption component versions that were released around the same time as the corresponding Cloudera Enterprise release.

Table 11: Cloudera Navigator Encryption Components Release Versions

Cloudera Enterprise Release	Cloudera Navigator Key Trustee Server Version	Key Trustee KMS Version	Cloudera Navigator Key HSM Version	Cloudera Navigator Encrypt Version
5.16.x	<i>No release; use 5.15.x</i>	5.16.x	<i>No release; use 1.11.x</i>	3.16.x
5.15.x	5.15.x	5.15.x	<i>No release; use 1.11.x</i>	3.15.x
5.14.x	5.14.x	5.14.x	1.11.x	<i>No release; use 3.14.x</i>
5.13.x	5.13.x	5.13.x	<i>No release; use 1.10.x</i>	3.14.x
5.12.x	5.12.x	5.12.x	1.10.x	3.13.x
5.11.x	5.11.x	5.11.x	1.9.x	3.12.x

See below for the individual compatibility matrices for each component:

Cloudera Navigator Key Trustee Server

Because of a change in the ports used by Key Trustee Server, Navigator Encrypt versions lower than 3.7 and Key Trustee KMS versions lower than 5.4 are not supported in Key Trustee Server 5.4 and higher.

Key Trustee Server: Recommended Hardware and Supported Distributions

Recommended Hardware and Supported Distributions

Key Trustee Server must be installed on a dedicated server or virtual machine (VM) that is not used for any other purpose. The backing PostgreSQL database must be installed on the same host as the Key Trustee Server, and must not be shared with any other services. For high availability, the active and passive Key Trustee Servers must not share physical resources. See [Resource Planning for Data at Rest Encryption](#) for more information.

The recommended minimum hardware specifications are as follows:

- Processor: 1 GHz 64-bit quad core
- Memory: 8 GB RAM
- Storage: 20 GB on moderate-to high-performance disk drives

Key Trustee KMS

Key Trustee KMS: Recommended Hardware and Supported Distributions

The recommended minimum hardware specifications are as follows:

- Oracle Java Runtime Environment (JRE) 7 or higher with Java Cryptography Extension (JCE) Unlimited Strength Jurisdiction Policy Files:
 - [JCE for Java SE 7](#)
 - [JCE for Java SE 8](#)

Note: JDK 1.8u161 and higher enable unlimited strength encryption by default, and do not require policy files.

- Processor: 2 GHz 64-bit quad core
- Memory: 16 GB RAM
- Storage: 40 GB on moderate-to high-performance disk drives

The Key Trustee KMS workload is CPU-intensive. Cloudera recommends using machines with capabilities equivalent to your NameNode hosts, with Intel CPUs that support [AES-NI](#) for optimum performance. Also, Cloudera strongly recommends that you enable TLS for both the HDFS and the Key Trustee KMS services to prevent the passage of plain text key material between the KMS and HDFS data nodes.

Cloudera Navigator HSM KMS

Navigator HSM KMS: Recommended Hardware and Supported Distributions

The recommended minimum hardware specifications are as follows:

- Oracle Java Runtime Environment (JRE) 7 or higher with Java Cryptography Extension (JCE) Unlimited Strength Jurisdiction Policy Files:
 - [JCE for Java SE 7](#)
 - [JCE for Java SE 8](#)

Note: JDK 1.8u161 and higher enable unlimited strength encryption by default, and do not require policy files.

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

- Processor: 2 GHz 64-bit quad core
- Memory: 16 GB RAM
- Storage: 40 GB on moderate-to high-performance disk drives

Supported HSM devices:

- SafeNet Luna
 - HSM software version: 6.2.2-5
 - HSM firmware version: 6.10.9
 - Client: 6.2.2
- Thales nShield Solo, nShield Connect
 - Server version: 3.67.11cam4
 - Firmware: 2.65.2
 - Security World Version: 12.30

Table 14: HSM KMS Compatibility Matrix

HSM KMS Version	Supported Operating Systems	Supported Cloudera Manager Version	Supported CDH Versions
5.16.x	<ul style="list-style-type: none">• RHEL and CentOS: 6.8, 6.9, 7.1 - 7.5	5.16.x and higher	5.12.x - 5.16.x

Cloudera Navigator Key HSM

Cloudera Navigator Key HSM must be installed on the same host as Key Trustee Server. Although Key HSM is compatible across all versions of Key Trustee Server, Cloudera strongly recommends also upgrading Key HSM after you upgrade Key Trustee Server.

Key HSM: Recommended Hardware and Supported Distributions

The following are prerequisites for installing Navigator Key HSM:

- Oracle Java Runtime Environment (JRE) 7 or higher with Java Cryptography Extension (JCE) Unlimited Strength Jurisdiction Policy Files:
 - [JCE for Java SE 7](#)
 - [JCE for Java SE 8](#)

Note: JDK 1.8u161 and higher enable unlimited strength encryption by default, and do not require policy files.

- A supported HSM device:

- Thales (formerly SafeNet) Luna
 - v6
 - HSM firmware version: 6.2.1
 - HSM software version: 5.2.3-1
 - v7
 - HSM firmware version: 7.0.3
 - HSM software version: 7.2.0
 - HSM firmware version: 6.2.1
 - HSM software version: 5.2.3-1
 - SafeNet KeySecure
 - HSM firmware version: 6.2.1
 - HSM software version: 8.0.1, 8.1.0, 8.7.0
 - Thales nShield Solo, nShield Connect
 - HSM firmware version: 11.4.0
 - Client software version: 2.28.9cam136
- Key Trustee Server 3.8 or higher

 **Important:** You must install Key HSM on the same host as Key Trustee Server.

Root access is required to install Navigator Key HSM.

Table 15: Cloudera Navigator Key HSM Compatibility Matrix

Cloudera Navigator Key HSM Version	Supported Operating Systems	Supported Key Trustee Server Versions
1.11.x	• RHEL and CentOS: 6.4 - 6.9, 7.1 - 7.6	3.8.x and higher
1.10.x	• RHEL and CentOS: 6.4 - 6.9, 7.1 - 7.3	3.8.x and higher
1.9.x	• RHEL and CentOS: 6.4 - 6.8, 7.1, 7.2	3.8.x and higher
1.8.x	• RHEL and CentOS: 6.4 - 6.8, 7.1, 7.2	3.8.x and higher
1.7.x	• RHEL and CentOS: 6.4 - 6.7, 7.1, 7.2	3.8.x and higher
1.6.x	• RHEL and CentOS: 6.4 - 6.7, 7.1, 7.2	3.8.x and higher
1.5.x	• RHEL and CentOS: 6.4 - 6.7, 7.1	3.8.x and higher
1.4.x	• RHEL and CentOS: 6.4 - 6.6	3.8.x and higher
1.3.x	• RHEL and CentOS: 6.4, 6.5	3.8.x and higher

Cloudera Navigator Encrypt

Note: Cloudera Enterprise, with the exception of Cloudera Navigator Encrypt, is supported on platforms with Security-Enhanced Linux (SELinux) enabled and in `enforcing` mode. Cloudera is not responsible for SELinux policy development, support, or enforcement. If you experience issues running Cloudera software with SELinux enabled, contact your OS provider for assistance.

If you are using SELinux in `enforcing` mode, Cloudera Support can request that you disable SELinux or change the mode to `permissive` to rule out SELinux as a factor when investigating reported issues.

Supported command-line interpreters:

- `sh` (Bourne)
- `bash` (Bash)
- `dash` (Debian)

Note: Navigator Encrypt does not support installation or use in `chroot` environments.

Network Requirements

For new Navigator Key Trustee Server (5.4.0 and higher) installations, Navigator Encrypt initiates TCP traffic over port 11371 (HTTPS) to the Key Trustee Server.

For upgrades and Key Trustee Server versions lower than 5.4.0, Navigator Encrypt initiates TCP traffic over ports 80 (HTTP) and 443 (HTTPS) to the Navigator Key Trustee Server.

Internet Access

You must have an active connection to the Internet to download many package dependencies, unless you have internal repositories or mirrors containing the dependent packages.

Maintenance Window

Data is not accessible during the encryption process. Plan for system downtime during installation and configuration.

Administrative Access

To enforce a high level of security, all Navigator Encrypt commands require administrative (root) access (including installation and configuration). If you do not have administrative privileges on your server, contact your system administrator before proceeding.

Package Dependencies

Navigator Encrypt requires these packages, which are resolved by your distribution package manager during installation:

- `dkms`
- `keyutils`
- `ecryptfs-utils`
- `libkeytrustee`
- `navencrypt-kernel-module`
- `openssl`
- `lsuf`
- `gcc`
- `cryptsetup`

These packages may have other dependencies that are also resolved by your package manager. Installation works with `gcc`, `gcc3`, and `gcc4`.

Product Compatibility Matrix for Apache Sentry

Sentry enables role-based, fine-grained authorization for HiveServer2 and provides classic database-style authorization for Hive, Cloudera Impala and Cloudera Search. You can use either the Sentry service (introduced in Cloudera Manager 5.1.0 and CDH 5.1.0) or the policy file approach to secure your data.

Note: It's possible for a single cluster to use both the Sentry service (for Hive and Impala) and Sentry policy files (for Solr).

Product	Feature	Lowest supported Cloudera Manager Version	Lowest supported CDH Version	Lowest supported Impala Version	Lowest supported Search Version	Integrated into CDH
Apache Sentry	Sentry Service	Cloudera Manager 5.1.0	CDH 5.1.0	Impala 1.4.0 for CDH 5	Search for CDH 5.8.0	Yes
	Policy File	Cloudera Manager 5.0.0	CDH 5.0.0	Impala 1.3.0	Search 1.1.0	Yes

Support for Other Filesystems

Filesystems	Lowest Release Supported
Amazon S3 (s3a)	Apache Sentry for CDH 5.8
Amazon RDS	Apache Sentry for CDH 5.9

Product Compatibility Matrix for Apache Spark

Spark is a fast, general engine for large-scale data processing. For installation and configuration instructions, see [Setting Up Apache Spark Using the Command Line](#). To see new features introduced with each release, refer to the [CDH 5 Release Notes](#) on page 1812.

Since Spark 1.6 has been integrated into the CDH package, its compatibility with Cloudera Manager and CDH depends on the CDH 5.x.x release it is shipped with.

 **Note:** This page contains information related to Spark 1.6, which is included with CDH. For information about the separately available parcel for CDS 2 Powered by Apache Spark, see [the documentation for CDS 2](#).

Product	Lowest Supported Cloudera Manager Version	Lowest Supported CDH Version	Lowest supported Impala Version	Lowest supported Search Version	Integrated into CDH
Apache Spark 1.6.x	Cloudera Manager 5.7.x	CDH 5.7.x	Not Supported	Not Supported	CDH 5.7.0
Apache Spark 1.5.x	Cloudera Manager 5.5.x and Cloudera Manager 5.6.x	CDH 5.5.x and CDH 5.6.x	Not Supported	Not Supported	CDH 5.5.0 and CDH 5.6.0
Apache Spark 1.3.x	Cloudera Manager 5.4.x	CDH 5.4.x	Not Supported	Not Supported	CDH 5.4.0

Apache Spark 1.1.x	Cloudera Manager 5.2.x	CDH 5.2.x	Not Supported	Not Supported	CDH 5.2.0
Apache Spark 1.0.x	Cloudera Manager 5.1.x	CDH 5.1.x	Not Supported	Not Supported	CDH 5.1.0

Product	Lowest Supported Cloudera Manager Version	Lowest Supported CDH Version	Lowest supported Impala Version	Lowest supported Search Version	Integrated into CDH
Apache Spark 0.9.x	Cloudera Manager 5.0.x	CDH 5.0.x	Not Supported	Not Supported	CDH 5.0.0

Product Compatibility for Dell EMC Isilon

See also [Hadoop Distributions and Products Supported by OneFS](#) on the Dell EMC Community website.

For compatibility with Cloudera Manager Replication and Snapshot features, see [Product Compatibility Matrix for Backup and Disaster Recovery](#) on page 77. For information on using Isilon with CDH, see [Using CDH with Isilon Storage](#).

CDH Version	Isilon OneFS Version
5.12 - 5.16 <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">  Note: 5.12 and higher include Cloudera Navigator support to extract metadata and lineage from clusters using Isilon storage. </div>	<ul style="list-style-type: none"> • 8.1.2.x • 8.1.1.x • 8.1.0.x • 8.0.1.x • 8.0.0.x releases 8.0.0.4 and higher
5.8 - 5.11	<ul style="list-style-type: none"> • 8.1.2.x • 8.1.1.x • 8.1.0.x • 8.0.1.x • 8.0.0.x releases 8.0.0.4 and higher • 8.0.0.3 (with patch 184679) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">  Note: The patch fixes a bug that prevented high availability services from working correctly in a Kerberized environment. </div>
5.4.4 - 5.7	<ul style="list-style-type: none"> • 8.1.2.x • 8.1.1.x • 8.1.0.x • 8.0.1.x • 8.0.0.x releases 8.0.0.4 and higher • 8.0.0.3 (with patch 184679) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">  Note: The patch fixes a bug that prevented high availability services from working correctly in a Kerberized environment. </div> <ul style="list-style-type: none"> • 7.2.0.3 and higher (Cloudera recommends 7.2.1.1)

Product Compatibility Matrix for Backup and Disaster Recovery

This matrix contains compatibility information across features of Cloudera Manager Backup and Disaster Recovery and CDH and Cloudera Manager.

Product	Feature	Lowest supported Cloudera Manager Version	Lowest supported CDH Version	Supported Services
Backup & Disaster Recovery	Replication	Cloudera Manager 4.5.0	CDH 4.0.1	HDFS, Hive, Impala
	Replication to and from Amazon S3*	Cloudera Manager 5.9.0	CDH 5.9.0	HDFS, Hive, Impala
	Replication to and from Microsoft ADLS	Cloudera Manager 5.15.0	CDH 5.15.0	HDFS, Hive, Impala
	Snapshots	Cloudera Manager 5.0.0	CDH 5.0.0	HDFS, Hive, Impala
	Snapshots from Isilon storage	Not Supported	Not Supported	HDFS, Hive, Impala

*BDR does not support S3 as a source or destination when S3 is configured to use SSE-KMS.

Supported Replication Scenarios

In Cloudera Manager 5, replication is supported between CDH 5 or CDH 4 clusters. The following tables describe support for HDFS and Hive/Impala replication. The versions listed in the table are the lowest version of Cloudera Manager and CDH required to perform the replication. For example, replication with TLS/SSL enabled on Hadoop services on the source and destination clusters requires Cloudera Manager and CDH version 5.0 or higher on the source and destination.

The tables below list the supported replication scenarios:

Note: BDR supports replication scenarios where TLS is enabled for non-Hadoop services (Hive/Impala) and TLS is disabled Hadoop services (such as HDFS, YARN, and MapReduce) if the Cloudera Manager and CDH versions are a supported replication scenario.

Service	Source			Destination		
	Cloudera Manager Version	CDH Version	Comment	Cloudera Manager Version	CDH Version	Comment
HDFS, Hive	4	4		5	4	
HDFS, Hive	4	4.4		5	5	
HDFS, Hive	5	5	TLS/SSL enabled on Hadoop services	5	5	TLS/SSL enabled on Hadoop services
HDFS, Hive	5	5	TLS/SSL enabled on Hadoop services	5	5	TLS/SSL <i>not</i> enabled on Hadoop services
HDFS, Hive	5	5.1	TLS/SSL enabled on Hadoop services and YARN	5	4 or 5	

CDH 5 and Cloudera Manager 5 Requirements and Supported Versions

Service	Source			Destination		
	Cloudera Manager Version	CDH Version	Comment	Cloudera Manager Version	CDH Version	Comment
HDFS, Hive	5	4		4.7.3 or higher	4	
HDFS, Hive	5	4		5	4	
HDFS, Hive	5	5		5	5	
HDFS, Hive	5	5		5	4.4 or higher	
HDFS, Hive	5.7	5.7, with Isilon storage	See Supported Replication Scenarios for Clusters using Isilon Storage on page 80.	5.7	5.7, with Isilon storage	See Supported Replication Scenarios for Clusters using Isilon Storage on page 80.
HDFS, Hive	5.7	5.7		5.7	5.7, with Isilon storage	
HDFS, Hive	5.7	5.7, with Isilon storage		5.7	5.7	
HDFS, Hive	5.8	5.8, with or without Isilon Storage	<ul style="list-style-type: none"> • Kerberos can be enabled • See Supported Replication Scenarios for Clusters using Isilon Storage on page 80. 	5.8	5.8, with or without Isilon Storage	<ul style="list-style-type: none"> • Kerberos can be enabled • See Supported Replication Scenarios for Clusters using Isilon Storage on page 80.

Unsupported Replication Scenarios

Note: If you are using Isilon storage for CDH, see [Supported Replication Scenarios for Clusters using Isilon Storage](#) on page 80.

The tables below list the unsupported replication scenarios:

Service	Source			Destination		
	Cloudera Manager Version	CDH Version	Comment	Cloudera Manager Version	CDH Version	Comment
Any	4 or 5	4 or 5	Kerberos enabled.	4 or 5	4 or 5	Kerberos not enabled
Any	4 or 5	4 or 5	Kerberos not enabled.	4 or 5	4 or 5	Kerberos enabled
HDFS, Hive	4 or 5	4	Where the replicated data includes a directory that contains a large number of files or subdirectories (several hundred thousand entries), causing out-of-memory errors.	4 or 5	5	

Service	Source			Destination		
	Cloudera Manager Version	CDH Version	Comment	Cloudera Manager Version	CDH Version	Comment
			To work around this issue, follow this procedure .			
Hive	4 or 5	4	Replicate HDFS Files is disabled.	4 or 5	4 or 5	Over-the-wire encryption is enabled.
Hive	4 or 5	4	Replication can fail if the NameNode fails over during replication.	4 or 5	5, with high availability enabled	Replication can fail if the NameNode fails over during replication.
Hive	4 or 5	4	The clusters use different Kerberos realms.	4 or 5	5	An older JDK is deployed. (Upgrade the CDH 4 cluster to use JDK 7 or JDK6u34 to work around this issue.)
Any	4 or 5	4	SSL enabled on Hadoop services.	4 or 5	4 or 5	
Hive	4 or 5	4.2 or higher	If the Hive schema contain views.	4 or 5	4	
HDFS	4 or 5	4, with high availability enabled	Replications fail if NameNode failover occurs during replication.	4 or 5	5, without high availability	Replications fail if NameNode failover occurs during replication.
HDFS	4 or 5	4 or 5	Over the wire encryption is enabled.	4 or 5	4	
HDFS	4 or 5	5	Clusters where there are URL-encoding characters such as % in file and directory names.	4 or 5	4	
Hive	4 or 5	4 or 5	Over the wire encryption is enabled and Replicate HDFS Files is enabled.	4 or 5	4	
Hive	4 or 5	4 or 5	From one cluster to the same cluster.	4 or 5	4 or 5	From one cluster to the same cluster.
HDFS, Hive	4 or 5	5	Where the replicated data includes a directory that contains a large number of files or subdirectories (several hundred thousand entries), causing out-of-memory errors. To work around this issue, follow this procedure .	4 or 5	4	
HDFS	4 or 5	5	The clusters use different Kerberos realms.	4 or 5	4	An older JDK is deployed. (Upgrade the CDH 4 cluster to use JDK 7 or JDK6u34

HDFS, Hive	5	5		4	4	
Hive	5.2	5.2 or lower	Replication of Impala UDFs is skipped.	4 or 5	4 or 5	

Supported Replication Scenarios for Clusters using Isilon Storage

Note the following when scheduling replication jobs for clusters that use Isilon storage:

- As of CDH 5.8 and higher, Replication is supported for clusters using Kerberos and Isilon storage on the source or destination cluster, or both. See [Configuring Replication with Kerberos and Isilon](#). Replication between clusters using Isilon storage and Kerberos is not supported in CDH 5.7.
- Make sure that the `hdfs` user is a superuser in the Isilon system. If you specify alternate users with the **Run As** option when creating replication schedules, those users must also be superusers.
- Cloudera recommends that you use the Isilon `root` user for replication jobs. (Specify `root` in the **Run As** field when creating replication schedules.)
- Select the **Skip checksum checks** property when creating replication schedules.
- Clusters that use Isilon storage do not support [snapshots](#). Snapshots are used to ensure data consistency during replications in scenarios where the source files are being modified. Therefore, when replicating from an Isilon cluster, Cloudera recommends that you do not replicate Hive tables or HDFS files that could be modified before the replication completes.

See [Using CDH with Isilon Storage](#).

Supported Configurations with Virtualization and Cloud Platforms

This section lists supported cloud and virtualization platforms for deploying Cloudera software. The linked reference architectures are not replacements for statements of support above, but are guides to assist with deployment and sizing options.

Amazon Web Services

For information on deploying Cloudera software on a Amazon Web Services (AWS) cloud infrastructure, see the [Cloudera Enterprise Reference Architecture for AWS Deployments](#).

Google Cloud Platform

For information on deploying Cloudera software on a Google Cloud Platform infrastructure, see the [Cloudera Enterprise Reference Architecture for Google Cloud Platform Deployments](#).

Microsoft Azure

For information on deploying Cloudera software on a Microsoft Azure cloud infrastructure, see the [Cloudera Enterprise Reference Architecture for Azure Deployments](#).

Support Limitations for CDH and Cloudera Manager in Microsoft Azure

- Virtual machines must use Cloudera-published CentOS 6.x/7.x OS Images or Red Hat published 6.x/7.x Images. Red Hat images must include bootstrapped configuration as specified in the [Azure Bootstrap Scripts folder](#) in the Cloudera Director GitHub repository.
- Master Node Services *must use* Azure Premium Storage Disks for persistent storage.
- The VM local [temporary disk](#) *must not* be used for any persistent data for HDFS, Kudu, or other services.
- [Microsoft Azure Storage - Block Blob](#) (previously known as Windows Azure Storage Blob, accessed via wasb:// URI's) is only supported for backups using Hadoop's DistCP. Other services are not supported running directly against Azure Storage block blobs.

VMware

For information on deploying Cloudera software on a VMware-based infrastructure, see the [Reference architecture for deploying on VMware](#).

Recommendation when deploying on VMware in the current release:

- Use the part of Hadoop Virtual Extensions that has been implemented in [HADOOP-8468](#). This will prevent data loss when a physical node that hosts two or more DataNodes goes down .

Red Hat OpenStack Platform (OSP) 11

For information on deploying Cloudera software on RedHat OpenStack Platform (OSP) 11, see [Reference Architecture for Deploying CDH 5.x on Red Hat OSP 11](#).

For information on deploying Cloudera software on RedHat OpenStack Platform (OSP) 11 with Ceph storage, see [Reference Architecture for Deploying Cloudera Enterprise 5.x on Red Hat OpenStack Platform 11 with Red Hat Ceph Storage 2.x](#).

Hardware Requirements Guide

To assess the hardware and resource allocations for your cluster, you need to analyze the types of workloads you want to run on your cluster, and the CDH components you will be using to run these workloads. You should also consider the size of data to be stored and processed, the frequency of workloads, the number of concurrent jobs that need to run, and the speed required for your applications.

As you create the architecture of your cluster, you will need to allocate Cloudera Manager and CDH roles among the hosts in the cluster to maximize your use of resources. Cloudera provides some guidelines about how to assign roles to cluster hosts. See [Recommended Cluster Hosts and Role Distribution](#). When multiple roles are assigned to hosts, add together the total resource requirements (memory, CPUs, disk) for each role on a host to determine the required hardware.

For information about how workloads affect sizing decisions, see the following blog post: [How-to: Select the Right Hardware for Your New Hadoop Cluster](#).

For more information about sizing for a particular component, see the following minimum requirements:

Cloudera Manager

Cloudera Manager Server Storage Requirements

Component	Storage	Notes
Partition hosting /usr	1 GB	
Cloudera Manager Database	5 GB	If the Cloudera Manager Database shares a host with the Service Monitor and Host Monitor, more storage space is required to meet the requirements for those components.

Host Based Cloudera Manager Server Requirements

Number of Cluster Hosts	Database Host Configuration	Heap Size	Logical Processors	Cloudera Manager Server Storage Local Directory
Very small (≤ 10)	Shared	2 GB	4	5 GB minimum
Small (≤ 20)	Shared	4 GB	6	20 GB minimum
Medium (≤ 200)	Dedicated	8 GB	6	200 GB minimum
Large (≤ 500)	Dedicated	10 GB	8	500 GB minimum
Extra Large (> 500)	Dedicated	16 GB	16	1 TB minimum

Note: On smaller clusters, the Cloudera Manager Server and Database can share a host. On larger clusters, they must run on separate dedicated hosts.

Service Monitor Requirements

The requirements for the Service Monitor are based on the number of monitored entities. To see the number of monitored entities, perform the following steps:

1. Open the Cloudera Manager Admin Console and click **Clusters > Cloudera Management Service**.
2. Find the **Cloudera Management Service Monitored Entities** chart. If the chart does not exist, add it from the **Chart Library**.

For more information about Cloudera Manager entities, see [Cloudera Manager Entity Types](#).

Clusters with HDFS, YARN, or Impala

Use the recommendations in this table for clusters where the only services with worker roles are HDFS, YARN, or Impala.

Number of Monitored Entities	Number of Hosts	Required Java Heap Size	Recommended Non-Java Heap Size
0-2,000	0-100	1 GB	6 GB
2,000-4,000	100-200	1.5 GB	6 GB
4,000-8,000	200-400	1.5 GB	12 GB
8,000-16,000	400-800	2.5 GB	12 GB
16,000-20,000	800-1,000	3.5 GB	12 GB

Clusters with HBase, Solr, Kafka, or Kudu

Use these recommendations when services such as HBase, Solr, Kafka, or Kudu are deployed in the cluster. These services typically have larger quantities of monitored entities.

Number of Monitored Entities	Number of Hosts	Required Java Heap Size	Recommended Non-Java Heap Size
0-30,000	0-100	2 GB	12 GB
30,000-60,000	100-200	3 GB	12 GB
60,000-120,000	200-400	3.5 GB	12 GB
120,000-240,000	400-800	8 GB	20 GB

Host Monitor

The requirements for the Host Monitor are based on the number of monitored entities.

To see the number of monitored entities, perform the following steps:

1. Open the Cloudera Manager Admin Console and click **Clusters > Cloudera Management Service**.
2. Find the **Cloudera Management Service Monitored Entities** chart. If the chart does not exist, add it from the **Chart Library**.

For more information about Cloudera Manager entities, see [Cloudera Manager Entity Types](#).

Number of Hosts	Number of Monitored Entities	Heap Size	Non-Java Heap Size
0-200	<6k	1 GB	2 GB
200-800	6k-24k	2 GB	6 GB
800-1000	24k-30k	3 GB	6 GB

Ensure that you have at least 25 GB of disk space available for the Host Monitor, Service Monitor, Reports Manager, and Events Server databases.

For more information refer to [Host Monitor and Service Monitor Memory Configuration](#).

Reports Manager

The Reports Manager fetches the fsimage from the NameNode at regular intervals. It reads the fsimage and creates a Lucene index for it. To improve the indexing performance, Cloudera recommends provisioning a host as powerful as possible and dedicating an SSD disk to the Reports Manager.

Table 17: Reports Manager

Component	Java Heap	CPU	Disk
Reports Manager	3-4 times the size of the fsimage.	<ul style="list-style-type: none"> • Minimum: 8 cores • Recommended: 16 cores (32 cores, with hyperthreading enabled.) 	1 dedicated disk that is at least 20 times the size of the fsimage. Cloudera strongly recommends using SSD disks.

Agent Hosts

An unpacked parcel requires approximately three times the space of the packed parcel that is stored on the Cloudera Manager Server.

The /var/log partition on each host should have a minimum of 2GB of disk space allocated **per role** running on the host.

Event Server

The following table lists the minimum requirements for the Event Server:

CPU	RAM	Storage
1 core	256 MB	<ul style="list-style-type: none"> • 5 GB for the Event Database • 20 GB for the Event Server Index Directory. The location of this directory is set by the Event Server Index Directory Event Server configuration property.

Alert Publisher

The following table lists the minimum requirements for the Alert Publisher:

CPU	RAM	Storage
1 core	1 GB	Minimum of 1 disk for log files

Cloudera Navigator

The sizing of Navigator components varies heavily depending on the size of the cluster and the number of audit events generated. Refer to [Minimum Recommended Memory and Disk Space](#) for more information.

Table 18: Cloudera Navigator

Component	Java Heap / Memory	CPU	Disk
Navigator Audit Server	<p>Minimum: 2-3 GB of Java Heap</p> <p>Configure this value using the Java Heap Size of Auditing Server in Bytes configuration property.</p>	Minimum: 1 core	<p>The database used by the Navigator Audit Server must be able to accommodate hundreds of gigabytes (or tens of millions of rows per day). The database size may reach a terabyte.</p> <p>Ideally, the database should not be shared with other services because the audit insertion rate can overwhelm the database server making other services using same database less responsive.</p> <p>See Storage Space Planning for Cloudera Navigator.</p>
Navigator Metadata Server	<ul style="list-style-type: none"> • Minimum: 10 GB of Java Heap • Recommended: 20 GB Java Heap 	Minimum: 1 core	<ul style="list-style-type: none"> • Minimum: 50 GB • Recommended: 100-200 GB

Component	Java Heap / Memory	CPU	Disk
	<p>Add 20 GB for operating system buffer cache, however memory requirements can be much higher on a busy cluster and could require provisioning a dedicated host. Navigator logs include estimates based on the number of objects it is tracking.</p> <p>Configure this value using the Java Heap Size of Navigator Metadata Server in Bytes configuration property.</p>		<p>Note:</p> <p>Data stored by the Metadata server grows indefinitely unless you run the purge function. If you have not set up the purge function to run at a scheduled interval, Cloudera recommends that you run the purge function to reclaim disk space and keep data growth (and the corresponding memory requirement) in check.</p> <p>See Administration (Navigator Console).</p>

Cloudera Data Science Workbench

Hardware Component	Requirement	Notes
CPU	16+ CPU (vCPU) cores	Allocate at least 1 CPU core per session. 1 CPU core is often adequate for light workloads.
Memory	32 GB RAM	<ul style="list-style-type: none"> As a general guideline, Cloudera recommends nodes with RAM between 60GB and 256GB Allocating less than 2 GB of RAM can lead to out-of-memory errors for many applications.
Disk	<ul style="list-style-type: none"> Root Volume: 100 GB 	SSDs are strongly recommended for application data storage.

Hardware Component	Requirement	Notes
	<ul style="list-style-type: none"> Application Block Device or Mount Point (Master Host Only): 1 TB Docker Image Block Device: 1 TB 	

For more information on scaling guidelines and storage requirements for cloud providers such as AWS and Azure, see [Requirements and Supported Platforms](#) in the Cloudera Data Science Workbench documentation.

CDH

Accumulo

Component	Java Heap	CPU	Disk
Master	Minimum: 1 GiB <ul style="list-style-type: none"> 100-1000 tablets: 4 GB 10,000 or more tablets with 200 or more Tablet Servers: 8 GB 10,000 or more tablets with 300 or more Tablet Servers: 12 GB Set this value using the Tablet Server Max Heapsize Accumulo configuration property. See Flume Memory Consumption	2 Cores. Add more for large clusters or bulk load.	1 disk for local logs
Tablet Server	<ul style="list-style-type: none"> Minimum: 512 MB Java Heap Recommended: 8 GB Medium scale production (200 or more tablets per Tablet Server): 16 GB Set this value using the Tablet Server Max Heapsize Accumulo configuration property.	Minimum 4 dedicated cores. You can add more cores for larger clusters, when using replication, or for bulk loads.	<ul style="list-style-type: none"> 4 or more spindles for each HDFS DataNode 1 disk for local logs (this disk can be shared with the operating system and/or other Hadoop logs)
Tracer	1 - 2 GB, depending on cluster workloads Set this value using the Tracer Max Heapsize Accumulo configuration property.	2 or more dedicated cores, depending on cluster size and workloads	1 disk for local logs, which can be shared with the operating system and/or other Hadoop logs

Component	Java Heap	CPU	Disk
GC Role	1-2 GB Set this value using the Garbage Collector Max Heapspace Accumulo configuration property.	2 or more dedicated cores, depending on cluster size	1 disk for local logs, which can be shared with the operating system and/or other Hadoop logs
Monitor Role	1-2 GB Set this value using the Monitor Max Heapspace Accumulo configuration property.	2 or more dedicated cores, depending on cluster size and workloads	1 disk for local logs, which can be shared with the operating system and/or other Hadoop logs

For additional information, see [Apache Accumulo on CDH Installation Guide](#).

Flume

Component	Java Heap	CPU	Disk
Flume	<ul style="list-style-type: none"> • Minimum: 1 GB • Maximum 4 GB • Java Heap size should be greater than the maximum channel capacity Set this value using the Java Heap Size of Agent in Bytes Flume configuration property. See Flume Memory Consumption	Calculate the number of cores using the following formula: $(\text{Number of sources} + \text{Number of sinks}) / 2$	Multiple disks are recommended for file channels, either a JBOD setup or RAID10 (preferred due to increased reliability).

HDFS

Table 19: HDFS

Component	Memory	CPU	Disk
JournalNode	1 GB (default) Set this value using the Java Heap Size of JournalNode in Bytes HDFS configuration property.	1 core minimum	1 dedicated disk
NameNode	<ul style="list-style-type: none"> • Minimum: 1 GB (for proof-of-concept deployments) • Add an additional 1 GB for each additional 1,000,000 blocks Snapshots and encryption can increase	Minimum of 4 dedicated cores; more may be required for larger clusters	<ul style="list-style-type: none"> • Minimum of 2 dedicated disks for metadata • 1 dedicated disk for log files (This disk may be shared with the operating system.) • Maximum disks: 4

Component	Memory	CPU	Disk
	<p>the required heap memory.</p> <p>See Sizing NameNode Heap Memory</p> <p>Set this value using the Java Heap Size of NameNode in Bytes HDFS configuration property.</p>		
DataNode	<p>Minimum: 4 GB</p> <p>Increase the memory for higher replica counts or a higher number of blocks per DataNode. When increasing the memory, Cloudera recommends an additional 1 GB of memory for every 1 million replicas above 4 million on the DataNodes. For example, 5 million replicas require 5 GB of memory.</p> <p>Set this value using the Java Heap Size of DataNode in Bytes HDFS configuration property.</p>	<p>Minimum: 4 cores. Add more cores for highly active clusters.</p>	<p>Minimum: 4</p> <p>Maximum: 24</p> <p>The maximum acceptable size will vary depending upon how large average block size is. The DN's scalability limits are mostly a function of the number of replicas per DN, not the overall number of bytes stored. That said, having ultra-dense DNs will affect recovery times in the event of machine or rack failure. Cloudera does not support exceeding 100 TB per data node. You could use 12 x 8 TB spindles or 24 x 4TB spindles. Cloudera does not support drives larger than 8 TB.</p>

Warning: Running CDH on storage platforms other than direct-attached physical disks can provide suboptimal performance. Cloudera Enterprise and the majority of the Hadoop platform are optimized to provide high performance by distributing work across a cluster that can utilize data locality and fast local I/O. Refer to the [Cloudera Enterprise Storage Device Acceptance Criteria Guide](#) for more information about using non-local storage.

HBase

Component	Java Heap	CPU	Disk
Master	<ul style="list-style-type: none"> 100-10,000 regions: 4 GB 10,000 or more regions with 200 or more Region Servers: 8 GB 10,000 or more regions with 300 or more Region Servers: 12 GB 	<p>Minimum 4 dedicated cores. You can add more cores for larger clusters, when using replication, or for bulk loads.</p>	<p>1 disk for local logs, which can be shared with the operating system and/or other Hadoop logs</p>

Component	Java Heap	CPU	Disk
	Set this value using the Java Heap Size of HBase Master in Bytes HBase configuration property.		
Region Server	<ul style="list-style-type: none"> • Minimum: 8 GB • Medium-scale production: 16 GB • Heap larger than 16 GB requires special Garbage Collection tuning. See Configuring the HBase BlockCache <p>Set this value using the Java Heap Size of HBase RegionServer in Bytes HBase configuration property.</p>	Minimum: 4 dedicated cores	4 disks for each DataNode
Thrift Server	<p>1 GB - 4 GB</p> <p>Set this value using the Java Heap Size of HBase Thrift Server in Bytes HBase configuration property.</p>	Minimum 2 dedicated cores.	1 disk for local logs, which can be shared with the operating system and other Hadoop logs.

 **Note:** Consider adding more HBase Thrift Servers for production environments and deployments with a large number of Thrift client to scale horizontally.

Hive

Component	Java Heap	CPU	Disk	
HiveServer 2	Single Connection	4 GB	Minimum 4 dedicated cores	Minimum 1 disk This disk is required for the following: <ul style="list-style-type: none"> • HiveServer2 log files • <code>stdout</code> and <code>stderr</code> output files • Configuration files • Operation logs stored in the <code>operation_logs_dir</code> directory, which is configurable • Any temporary files that might be created by local map tasks
	2-10 connections	4-6 GB		
	11-20 connections	6-12 GB		
	21-40 connections	12-16 GB		
	41 to 80 connections	16-24 GB		
	Cloudera recommends splitting HiveServer2 into multiple instances and load balancing them once you start allocating more than 12 GB to HiveServer2. The objective is to adjust the size to reduce the impact of Java garbage collection on active processing by the service.			

Component	Java Heap	CPU	Disk
	<p>Set this value using the Java Heap Size of HiveServer2 in Bytes Hive configuration property.</p> <p>For more information, see Tuning Hive in CDH.</p>		under the /tmp directory
Hive Metastore	Single Connection	4 GB	Minimum 4 dedicated cores Minimum 1 disk This disk is required so that the Hive metastore can store the following artifacts: <ul style="list-style-type: none"> • Logs • Configuration files • Backend database that is used to store metadata if the database server is also hosted on the same node
	2-10 connections	4-10 GB	
	11-20 connections	10-12 GB	
	21-40 connections	12-16 GB	
	41 to 80 connections	16-24 GB	
	<p>Set this value using the Java Heap Size of Hive Metastore Server in Bytes Hive configuration property.</p> <p>For more information, see Tuning Hive in CDH.</p>		
Beeline CLI	Minimum: 2 GB	N/A	N/A

Hive on Spark Executor Nodes

Component	Memory	CPU	Disk
Hive-on-Spark	<ul style="list-style-type: none"> • Minimum: 16 GB • Recommended: 32 GB for larger data sizes <p>Individual executor heaps should be no larger than 16 GB so machines with more RAM can use multiple executors.</p>	<ul style="list-style-type: none"> • Minimum: 4 cores • Recommended: 8 cores for larger data sizes 	Disk space requirements are driven by scratch space requirements for Spark spill.
	<p>For more information on how to reserve YARN cores and memory that will be used by Spark executors, refer to Tuning Apache Hive on Spark in CDH.</p>		

HSM KMS

Component	Memory	CPU	Disk
Navigator HSM KMS	16 GB RAM	Minimum: 2 GHz 64-bit quad core	40 GB, using moderate to high-performance drives.

Hue

Component	Memory	CPU	Disk
Hue Server	<ul style="list-style-type: none"> • Minimum: 4 GB • Maximum 10 GB • If the cluster uses the Hue load balancer, add additional memory 	<p>Minimum: 1 Core to run Django</p> <p>When Hue is configured for high availability, add additional cores</p>	<p>Minimum: 10 GB for the database, which grows proportionally according to the cluster size and workloads.</p> <p>When Hue is configured for high availability, add temp space is required</p>

Note: Hue is limited by cgroup settings. Cloudera Manager 5.9 and higher all memory soft/hard limits are set to -1.

For more information about Hue high availability, see [How to Add a Hue Load Balancer](#).

Impala

Sizing requirements for Impala can vary significantly depending on the size and types of workloads using Impala.

Component	Native Memory	JVM Heap	CPU	Disk
Impala Daemon	<p>Set this value using the Impala Daemon Memory Limit configuration property.</p> <ul style="list-style-type: none"> • Minimum: 32 GB • Recommended: 128 GB 	<p>Use the <code>JAVA_TOOL_OPTIONS</code> environment variable to set the maximum heap size for the Coordinator Impala Daemons.</p> <ul style="list-style-type: none"> • Minimum: 4 GB • Recommended: 8 GB 	<ul style="list-style-type: none"> • Minimum: 4 • Recommended: 16 or more <p>CPU instruction set: AVX2</p>	<ul style="list-style-type: none"> • Minimum: 1 disk • Recommended: 8 or more
Catalog Server	<p>Set the maximum heap size for the Catalog Server:</p> <ul style="list-style-type: none"> • Minimum: 4 GB • Recommended: 8 GB <p>In Cloudera Manager, use the Java Heap Size of Catalog Server in Bytes configuration property (Cloudera Manager 5.7 and higher), or Impala Catalog Server Environment Advanced Configuration Snippet (Safety Valve) (Cloudera Manager 5.6 and lower).</p> <p>If not using Cloudera Manager, use the <code>JAVA_TOOL_OPTIONS</code> environment variable. For example, to set it to 8 GB: <code>JAVA_TOOL_OPTIONS= "-Xmx8g"</code></p>	<ul style="list-style-type: none"> • Minimum: 4 • Recommended: 16 or more <p>CPU instruction set: AVX2</p>	<ul style="list-style-type: none"> • Minimum and Recommended: 1 disk 	

For the networking topology for multi-rack cluster, [Leaf-Spine](#) is recommended for the optimal performance.

Kafka

Kafka requires a fairly small amount of resources, especially with some configuration tuning. By default, Kafka, can run on as little as 1 core and 1GB memory with storage scaled based on requirements for data retention.

CPU is rarely a bottleneck because Kafka is I/O heavy, but a moderately-sized CPU with enough threads is still important to handle concurrent connections and background tasks.

Kafka brokers tend to have a similar hardware profile to HDFS data nodes. How you build them depends on what is important for your Kafka use cases. Use the following guidelines:

To affect performance of these features:	Adjust these parameters:
Message Retention	Disk size
Client Throughput (Producer & Consumer)	Network capacity
Producer throughput	Disk I/O
Consumer throughput	Memory

A common choice for a Kafka node is as follows:

Component	Memory/Java Heap	CPU	Disk
Broker	<ul style="list-style-type: none"> RAM: 64 GB Recommended Java heap: 4 GB Set this value using the Java Heap Size of Broker Kafka configuration property. See	12- 24 cores	<ul style="list-style-type: none"> 1 HDD For operating system 1 HDD for Zookeeper dataLogDir 10- HDDs, using Raid 10, for Kafka data
MirrorMaker	1 GB heap Set this value using the Java Heap Size of MirrorMaker Kafka configuration property.	1 core per 3-4 streams	No disk space needed on MirrorMaker instance. Destination brokers should have sufficient disk space to store the topics being copied over.

Networking requirements: Gigabit Ethernet or 10 Gigabit Ethernet

Key Trustee Server

Component	Memory	CPU	Disk
Key Trustee Server <div style="border: 1px solid black; padding: 5px; width: fit-content;">  Note: KTS requires a additional dedicated resources. For more information, refer to Data at Rest Encryption Requirements. </div>	8 GB	1 GHz 64-bit quad core	20 GB, using moderate to high-performance drives

Key Trustee KMS

Component	Memory	CPU	Disk
Key Trustee KMS	16 GB	2 GHz 64-bit quad core	40 GB, using moderate to high-performance drives
<div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note:  Cloudera recommends using machines with capabilities equivalent to your NameNode hosts, with Intel CPUs that support AES-NI for optimum performance.</p> </div>			

Kudu

Component	Memory	CPU	Disk
Tablet Server	<ul style="list-style-type: none"> • Minimum: 4 GB • Recommended: 10 GB <p>Additional hardware may be required, depending on the workloads running in the cluster. If you are using Impala, see the Impala sizing guidelines.</p>		1 disk for write-ahead log (WAL). Using an SSD drive may improve performance.
Master	<ul style="list-style-type: none"> • Minimum: 256 MB • Recommended: 1 GB 		1 disk

For more information, see [Kudu Server Management](#).

Oozie

Component	Java Heap	CPU	Disk
Oozie	<ul style="list-style-type: none"> • Minimum: 1 GB (this is the default set by Cloudera Manager). This is sufficient for less than 10 simultaneous workflows, without forking. • If you notice excessive garbage collection, or out-of-memory errors, increase the heap size to 4 GB for 	No resources required	No resources required

Component	Java Heap	CPU	Disk
	medium-size production clusters or to 8 GB for large-size production clusters. <ul style="list-style-type: none"> Set this value using the Java Heap Size of Oozie Server in Bytes Oozie configuration property. 		

Additional tuning:

For workloads with many coordinators that run with complex workflows (a **max concurrency reached!** warning appears in the log and the Oozie `admin -queuedump` command shows a large queue):

- Increase the value of the `oozie.service.CallableQueueService.callable.concurrency` property to 50.
- Increase the value of the `oozie.service.CallableQueueService.threads` property to 200.

Do not use a Derby database as a backend database for Oozie.

Search

Component	Java Heap	CPU	Disk
Solr	<ul style="list-style-type: none"> Small workloads, or evaluations: 16 GB Smaller production environments: 32 GB Larger production environments: 96 GB is sufficient for most clusters. Set this value using the Java Heap Size of Solr Server in Bytes Solr configuration property. See	<ul style="list-style-type: none"> Minimum: 4 Recommended: 16 for production workloads 	No requirement. Solr uses HDFS for storage.

Note the following considerations for determining the optimal amount of heap memory:

- Size of searchable material:** The more searchable material you have, the more memory you need. All things being equal, 10 TB of searchable data requires more memory than 1 TB of searchable data.
- Content indexed in the searchable material:** Indexing all fields in a collection of logs, email messages, or Wikipedia entries requires more memory than indexing only the Date Created field.
- The level of performance required:** If the system must be stable and respond quickly, more memory may help. If slow responses are acceptable, you may be able to use less memory.

For more information refer to [Deployment Planning for Cloudera Search](#).

Sentry

Component	Java Heap	CPU	Disk
Sentry Server	<ul style="list-style-type: none"> Minimum: 576 MB 	Minimum: 4	

Component	Java Heap	CPU	Disk
	<ul style="list-style-type: none"> Recommended: 2.5 GB per million objects in the Hive database (servers, databases, tables, partitions, columns, URIs, and views) <p>Set this value with the Java Heap Size of Sentry Server in Bytes Sentry configuration property.</p>		

For more information about Sentry requirements, see [Before You Install Sentry](#).

Spark

Component	Java Heap	CPU	Disk
Spark History Server	<p>Minimum: 512 MB</p> <p>Set this value using the Java Heap Size of History Server in Bytes Spark configuration property.</p>	<p>1</p> <div style="border: 1px solid orange; padding: 5px; margin-top: 10px;"> <p>Important: Cloudera recommends that you adjust the number of CPUs and memory for the Spark History Server based on your specific cluster usage patterns.</p> </div>	<p>Minimum 1 disk for log files.</p>

YARN

Component	Java Heap	CPU	Other Recommendations
Job History Server	<ul style="list-style-type: none"> Minimum: 1 GB Increase memory by 1.6 GB for each 100,000 tasks kept in memory. For example: 5 jobs @ 100,000 mappers + 20,000 reducers = 600,000 total tasks requiring 9.6 GB of heap. <p>See the Other Recommendations column for additional tuning suggestions.</p> <p>Set this value using the Java Heap Size of JobHistory</p>	<p>Minimum: 1 core</p>	<ul style="list-style-type: none"> Set the mapreduce.jobhistory.hist.format property to binary (history files will load about 2x-3x faster with this setting). Available in CDH 5.5.0 or higher only. Set the mapreduce.jobhistory.loadtablesize property to a total loaded task count. Using the example in the Java Heap column to the left, of 650,000 total tasks, you can set it to 700,000 to allow for some safety margin.

Component	Java Heap	CPU	Other Recommendations
	<p>Server in Bytes YARN configuration property.</p>		<p>This should also prevent the JobHistoryServer from hanging during garbage collection, since the job count limit does not have a task limit.</p> <ul style="list-style-type: none"> • It is strongly recommended to enable G1GC if the heap is large (larger than 10 GB). • It is strongly recommended to set <code>mapreduce.jobhistory.maxjobspernode</code> so that jobs that have too many tasks will not be loaded and cached in memory. Such jobs can be retrieved by using the command line: <code>mapred job -history <jobId></code>
NodeManager	<p>Minimum: 1 GB</p> <p>Configure additional heap memory for the following conditions:</p> <ul style="list-style-type: none"> • Large number of containers • Large shuffle sizes in Spark or MapReduce <p>Set this value using the Java Heap Size of NodeManager in Bytes YARN configuration property.</p>	<ul style="list-style-type: none"> • Minimum: 8-16 cores • Recommended: 32-64 cores 	<p>Disks:</p> <ul style="list-style-type: none"> • Minimum: 8 disks • Recommended: 12 or more disks <p>Networking:</p> <ul style="list-style-type: none"> • Minimum: Dual 1Gbps or faster • Recommended: Single/Dual 10 Gbps or faster
ResourceManager	<p>Minimum: 1 GB</p> <p>Configure additional heap memory for the following conditions:</p> <ul style="list-style-type: none"> • More jobs • Larger cluster size • Number of retained finished applications (configured with the <code>yarn.resourcemanager.completedapplications</code> property). • Scheduler configuration <p>Set this value using the Java Heap Size of</p>	Minimum: 1 core	

Component	Java Heap	CPU	Other Recommendations
	ResourceManager in Bytes YARN configuration property.		
Other Settings	<ul style="list-style-type: none"> Set the ApplicationMaster Memory YARN configuration property to 512 MB Set the Container Memory Minimum YARN configuration property to 1 GB. 	N/A	N/A

For more information, see [Tuning YARN](#).

ZooKeeper

Component	Java Heap	CPU	Disk
ZooKeeper Server	<ul style="list-style-type: none"> Minimum: 1 GB Increase heap size when watching 10,000 - 100,000 ephemeral znodes and are using 1,000 or more clients. <p>Set this value using the Java Heap Size of ZooKeeper Server in Bytes ZooKeeper configuration property.</p>	Minimum: 4 cores	ZooKeeper was not designed to be a low-latency service and does not benefit from the use of SSD drives. The ZooKeeper access patterns – append-only writes and sequential reads – were designed with spinning disks in mind. Therefore Cloudera recommends using HDD drives.

- [Managing ZooKeeper](#)
- [ZooKeeper Administration Guide: Things to Avoid](#)

Version and Download Information

Version and download information for Cloudera Manager, CDH, Impala, and Search can be found in the HTML documentation on the website at [Cloudera Documentation](#). Select the release version number and go to the HTML version of the Release Guide.

Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication

Access to Cloudera Manager binaries for production purposes requires authentication. To access the binaries at the locations below, you must first have an active subscription agreement and obtain a license key file along with the required authentication credentials (username and password).

If your deployment was not installed using authenticated downloads and if you need to add hosts to an existing cluster, or add new clusters, you must follow the steps in this topic to configure your deployment to access the downloads.

Note that as of February 1, 2021, the download URLs on `archive.cloudera.com` have changed. They are the same as the previous URLs, except that `/p` is added to the URL, after `archive.cloudera.com`. Depending on where you use the URL, you may also need to prepend your credentials to the URL. The instructions below contain that information. For example:

```
https://username:password@archive.cloudera.com/p/...
```

For a complete list of download URLs, see:

- [Cloudera Manager 5.x Version and Download Information](#)
- [CDH 5.x Download Information](#)

Add hosts to an existing cluster

See

- [Add hosts to an existing cluster managed by Cloudera Manager using parcels](#) on page 102, below.
- [Add hosts to an existing cluster managed by Cloudera Manager using packages](#) on page 103

Add a new cluster

If you are adding a CDH cluster that is the same version of CDH as another cluster managed by the same instance of Cloudera Manager, no further action is required. To add a new cluster with a different supported version of CDH, see

- [Adding a Cluster to an existing Cloudera Manager deployment using Parcels](#) on page 103, below.
- [Adding a Cluster to an existing Cloudera Manager deployment using Packages](#) on page 104

New Installations

You must use the new URLs and include your username and password to access downloads for a new installation. See [Cloudera Installation Guide](#).

Upgrades

You must use the new URLs and include your username and password to access downloads for the upgrade. See the [Cloudera Enterprise Upgrade Guide](#).

If your deployment was installed or upgraded using authenticated downloads, no further action is needed.

Obtain Credentials

The license key file and authentication credentials are provided in an email sent to customer contacts from Cloudera when a new license is issued. If you have an existing license with a CDP Private Cloud Base Edition entitlement, you

Version and Download Information

might not have received an email. In this instance you can identify the authentication credentials from the license key file. If you do not have access to the license key, contact your account representative to receive a copy.

The license key file and authentication credentials are provided in an email sent to customer accounts from Cloudera when a new license is issued. If you have an existing license with a Cloudera Enterprise entitlement, you might not have received an email. In this instance you can identify the authentication credentials from the license key file. If you do not have access to the license key, contact your account representative to receive a copy.

To identify your authentication credentials using your license key file, complete the following steps:

1. From cloudera.com, log into the cloudera.com account associated with the Cloudera Enterprise license and subscription agreement.
2. On the [Cloudera CDH Download](#) page, select the version that you want to install and click **Get It Now!**
3. Scroll down to the Credentials Generator at the bottom of the page.
4. In the Generate Credentials text box, copy and paste the text of the “PGP Signed Message” within your license key file and click **Get Credentials**. The credentials generator returns your username and password.

Note: Take note of the authentication credentials. You will need them during installation to complete tasks such as configuring a remote or local package repository.

When you obtain your authentication credentials, use them to form the URLs below, where you can access the Cloudera repositories in the Cloudera Archive.

Prepare your deployment

There are two options for access to the downloads:

- **Option A: Upgrade Cloudera Manager and configure the package manager**
 1. **Upgrade Cloudera Manager** to one of the versions listed below. (If you are using Cloudera Manager 6.3.3 or higher, you do not need to upgrade.) Cloudera Manager is compatible with any version of CDH that is equal to or lower than the Cloudera Manager version. The versions of Cloudera Manager shown below have been updated to use authenticated downloads:

Table 20: Cloudera Manager Upgrades for authenticated downloads

Current Cloudera Manager version	Upgrade Cloudera Manager to this version
5.0.0 - 5.16.2	5.16.2.4505

Note: You do not need to upgrade CDH.

To upgrade Cloudera Manager:

1. Go to the interactive [Cloudera Enterprise Upgrade guide page for upgrading Cloudera Manager](#).
 2. In the form at the top of the page, select the current version of your Cloudera Manager deployment.
 3. Select the appropriate new version of Cloudera Manager from the table above.
 - a. Select the operating system, database, and Navigator status.
 4. Follow the remaining steps on the page to upgrade the Cloudera Manager server and agents.
2. **Configure your operating system package manager** (yum, zypper, or apt-get) to access the public Cloudera repositories at archive.cloudera.com. See the following links;
- [Configure a Repository for Cloudera Manager 5.16](#)

- [Configure a Repository for Cloudera Manager 5.15](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.14](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.13](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.12](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.11](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.10](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.9](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.8](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.7](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.6](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.5](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.4](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.3](#)
 - [Establish Your Cloudera Manager Repository Strategy using Cloudera Manager 5.2](#)
- **Option B: Use a local package and/or parcel repository**
- **Use a local package and /or parcel repository.** If your cluster does not have access to the internet, this is the only option.
 1. Download the contents of the repository for your version of the software from `archive.cloudera.com` using your username and password.
 2. Do one of the following:
 - Create a [local package repository](#) (for Cloudera Manager and CDH clusters installed using packages). See the following links:
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.16](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.15](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.14](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.13](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.12](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.11](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.10](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.9](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.8](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.7](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.6](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.5](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.4](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.3](#)
 - [Configuring a Local package repository for Cloudera Manager/CDH 5.2](#)
 - Create *local parcel repository* (for CDH clusters installed using Parcels). See the following links:
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.16](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.15](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.14](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.13](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.12](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.11](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.10](#)
 - [Configuring a Local parcel repository for Cloudera Manager/CDH 5.9](#)

- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.8](#)
- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.7](#)
- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.6](#)
- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.5](#)
- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.4](#)
- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.3](#)
- [Configuring a Local parcel repository for Cloudera Manager/CDH 5.2](#)

Add hosts to an existing cluster managed by Cloudera Manager using parcels

1. Follow the steps to *add hosts using the Add Host Wizard*. See the following links:

- [Adding a Host to the cluster using Cloudera Manager 5.16](#)
- [Adding a Host to the cluster using Cloudera Manager 5.15](#)
- [Adding a Host to the cluster using Cloudera Manager 5.14](#)
- [Adding a Host to the cluster using Cloudera Manager 5.13](#)
- [Adding a Host to the cluster using Cloudera Manager 5.12](#)
- [Adding a Host to the cluster using Cloudera Manager 5.11](#)
- [Adding a Host to the cluster using Cloudera Manager 5.10](#)
- [Adding a Host to the cluster using Cloudera Manager 5.9](#)
- [Adding a Host to the cluster using Cloudera Manager 5.8](#)
- [Adding a Host to the cluster using Cloudera Manager 5.7](#)
- [Adding a Host to the cluster using Cloudera Manager 5.5](#)
- [Adding a Host to the cluster using Cloudera Manager 5.4](#)
- [Adding a Host to the cluster using Cloudera Manager 5.3](#)
- [Adding a Host to the cluster using Cloudera Manager 5.2](#)

2. When you get to the **Select Repository** page, select **Use Parcels**.

3. Select the version of CDH that you want to install. If you want to use a version of CDH that is not displayed:

a. Click **More Options**.

b. In the **Remote Parcel Repository URLs** section, click the + icon do one of the following:

- If you have downloaded the parcel repository and have set up a local repository server, enter the URL for the local repository.
- If the cluster has access to the internet, enter the URL to the public repository on `archive.cloudera.com` See [CDH 5.x Download Information](#) to obtain the URL. For example:

```
https://username:password@archive.cloudera.com/p/cdh/parcels/5.16.2
```

The available versions of CDH display.

c. Select the version of CDH you want to install.

4. In the **Select the specific release of the Cloudera Manager Agent you want to install on your hosts** section, click **Custom Repository**.

5. Enter the URL for the Cloudera Manager package repository. For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/5.16.2.4505
```

6. Enter the URL for the GPG signing key in the **Custom GPG Key URL** field.

For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/RPM-GPG-KEY-cloudera
```

7. Continue with Add Hosts wizard to install the Cloudera Manager Agent, and, optionally the JDK.

Add hosts to an existing cluster managed by Cloudera Manager using packages

1. Follow the steps to *add hosts using the Add Host Wizard*. See the following links:

- [Adding a Host to the cluster using Cloudera Manager 5.16](#)
- [Adding a Host to the cluster using Cloudera Manager 5.15](#)
- [Adding a Host to the cluster using Cloudera Manager 5.14](#)
- [Adding a Host to the cluster using Cloudera Manager 5.13](#)
- [Adding a Host to the cluster using Cloudera Manager 5.12](#)
- [Adding a Host to the cluster using Cloudera Manager 5.11](#)
- [Adding a Host to the cluster using Cloudera Manager 5.10](#)
- [Adding a Host to the cluster using Cloudera Manager 5.9](#)
- [Adding a Host to the cluster using Cloudera Manager 5.8](#)
- [Adding a Host to the cluster using Cloudera Manager 5.7](#)
- [Adding a Host to the cluster using Cloudera Manager 5.5](#)
- [Adding a Host to the cluster using Cloudera Manager 5.4](#)
- [Adding a Host to the cluster using Cloudera Manager 5.3](#)
- [Adding a Host to the cluster using Cloudera Manager 5.2](#)

2. When you get to the **Select Repository** page, select **Use Packages**.

3. Select **Custom Repository** and enter one of the following:

- If you have downloaded the repository and set up a local repository server, enter URL for the local package repository.
- If the cluster has access to the internet, enter the URL to the public Cloudera package repository on `archive.cloudera.com`. See [Cloudera Manager Version and Download Information](#) to obtain the URL.

For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/7/x86_64/cm/5.16.2/
```

4. In the **Select the specific release of the Cloudera Manager Agent you want to install on your hosts.** section, click **Custom Repository**.

5. Enter the URL for the Cloudera Manager package repository. For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/5.16.2.4505
```

6. Enter the URL for the GPG signing key in the **Custom GPG Key URL** field.

For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/RPM-GPG-KEY-cloudera
```

7. Continue with Add Hosts wizard to install the Cloudera Manager Agent, and, optionally the JDK.

Adding a Cluster to an existing Cloudera Manager deployment using Parcels

1. Follow the steps to *add a cluster*. See the following links:

- [Adding and Deleting Clusters using Cloudera Manager 5.16](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.15](#)

Version and Download Information

- [Adding and Deleting Clusters using Cloudera Manager 5.14](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.13](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.12](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.11](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.10](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.9](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.8](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.7](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.5](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.4](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.3](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.2](#)

2. Select **Use Parcels**.

The available versions of CDH display.

3. Select the version of CDH that you want to install. If you want to use a version of CDH that is not displayed:

a. Click **More Options**.

b. In the **Remote Parcel Repository URLs** section, click the + icon do one of the following:

- If you have downloaded the parcel repository and have set up a local repository server, enter the URL for the local repository.
- If the cluster has access to the internet, enter the URL to the public repository on `archive.cloudera.com` See [CDH 5.x Download Information](#) to obtain the URL. For example:

```
https://username:password@archive.cloudera.com/p/cdh/parcels/5.16.2
```

The available versions of CDH display.

c. Select the version of CDH you want to install.

4. In the **Select the specific release of the Cloudera Manager Agent you want to install on your hosts.** section, click **Custom Repository**.

5. Enter the URL for the Cloudera Manager package repository. For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/5.16.2.4505
```

6. Enter the URL for the GPG signing key in the **Custom GPG Key URL** field.

For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/RPM-GPG-KEY-cloudera
```

7. Continue with add cluster wizard to install the Cloudera Manager Agent, and, optionally the JDK.

Adding a Cluster to an existing Cloudera Manager deployment using Packages

1. Follow the steps to *add a cluster*. See the following links:

- [Adding and Deleting Clusters using Cloudera Manager 5.16](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.15](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.14](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.13](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.12](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.11](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.10](#)

- [Adding and Deleting Clusters using Cloudera Manager 5.9](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.8](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.7](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.5](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.4](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.3](#)
- [Adding and Deleting Clusters using Cloudera Manager 5.2](#)

2. Select **Use Packages**.

3. Select **Custom Repository**

4. Enter the custom repository URL.

- If you have downloaded the package repository and have set up a local repository server, enter URL for the local repository.
- If the cluster has access to the internet, enter the URL to the public Cloudera package repository on `archive.cloudera.com`. See [CDH Download Information](#) to obtain the URL.

For example:

```
https://<username>:<password>@archive.cloudera.com/p/cdh5/redhat/7/x86_64/cdh/5.16.2/
```

5. In the **Select the specific release of the Cloudera Manager Agent you want to install on your hosts.** section, click **Custom Repository**.

6. Enter the URL for the Cloudera Manager package repository. For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/5.16.2.4505
```

7. Enter the URL for the GPG signing key in the **Custom GPG Key URL** field.

For example:

```
https://<username>:<password>@archive.cloudera.com/p/cm5/redhat/6/x86_64/cm/RPM-GPG-KEY-cloudera
```

8. Continue with add cluster wizard to install the Cloudera Manager Agent, and, optionally the JDK.

Cloudera Manager Version and Download Information

Cloudera Manager is available in the following releases:

- Cloudera Manager 5.16.2 is the current release of Cloudera Manager 5.16.
- Cloudera Manager 5.15.2, 5.14.4, 5.13.3, 5.12.2, 5.11.2, 5.10.2, 5.9.3, 5.8.5, 5.7.6, 5.6.1, 5.5.6, 5.4.10, 5.3.10, 5.2.7, 5.1.6, and 5.0.7 are previous stable releases of Cloudera Manager 5.14, 5.13, 5.12, 5.11, 5.10, 5.9, 5.8, 5.7, 5.6, 5.5, 5.4, 5.3, 5.2, 5.1, and 5.0 respectively.

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

**Warning:**

- Cloudera Manager 4 and CDH 4 have reached End of Maintenance (EOM) on August 9, 2015. Cloudera does not support or provide updates for Cloudera Manager 4 and CDH 4 releases.
- Cloudera Manager 3 and CDH 3 have reached End of Maintenance (EOM) on June 20, 2013. Cloudera does not support or provide updates for Cloudera Manager 3 and CDH 3 releases.

The 64-bit packages listed here support both Cloudera Express with its extensive set of monitoring and management features, and Cloudera Enterprise with additional functionality. A 60-day trial can be enabled to provide access to the full set of Cloudera Enterprise Cloudera Enterprise features. Cloudera Enterprise can be enabled permanently with the appropriate license. To obtain a Cloudera Enterprise license, fill in this [form](#) or call 866-843-7207.

Important: The repo file links in the Repositories tables in this topic always install the *latest* version of Cloudera Manager 5. If you need to install a specific, lower version of Cloudera Manager 5, you must download the contents of the repository from the "repo-as-tarball" directory and create an [internal package repository](#) to use for your installation. Open one of the following links, and then navigate to the correct operating system and Cloudera version:

- – **Cloudera Manager 5:**
<https://username:password@archive.cloudera.com/p/cm5/repo-as-tarball/>
- **CDH 5:** <https://username:password@archive.cloudera.com/p/cdh5/repo-as-tarball/>

Component Versions

For a complete list of the individual component versions, see the `manifest.json` file in the `parcel` directory for your chosen release. The component version numbers are the same in parcels as the package distributions for each release.

1. Go to <https://username:password@archive.cloudera.com/p/cdh5/parcels/>.
2. Open the directory for your release (for example, `/cdh5/parcels/5.9.0`).
3. Open the `manifest.json` file.

For each component, the `pkg_version` is a concatenation of `<upstream_version>+<cdh_version>+<number_of_patches_on_upstream_release>`.

For example, in `/cdh5/parcels/5.9.0/manifest.json`, this entry for Hadoop shows an upstream version is 2.6.0, the CDH version is 5.9.0, and there have been 1,799 patches to the upstream version in the 2.6.0 release.

```
{
  "pkg_version": "2.6.0+cdh5.9.0+1799",
  "pkg_release": "1.cdh5.9.0.p0.30",
  "name": "hadoop",
  "version": "2.6.0-cdh5.9.0"
}
```

Cloudera Manager 5.16.2.4505

Release Date: February 1, 2021 **Status:** Production

Note: This version of Cloudera Manager has been modified to manage clusters using the new download locations that require authentication.

Documentation:

CDH Version and Packaging Information

For installation instructions for CDH 5, see [Cloudera Installation](#).

If you are using a platform that is not supported by Debian, RPM, or SUSE packages, you can download the patched sources – see the Patched Tarball links for the version you want.

Version and Download Information

CDH is available in the following releases:

- CDH 5 is the current stable release, based on Apache Hadoop 2.3.0 or later.

For information on the exact Apache Hadoop version included in each CDH version, see [CDH 5 Packaging and Tarball Information](#) on page 230. For platforms not supported by Debian, RPM, or SLES packages, download the tarball with the appropriate patch-level.

Important:

- Cloudera Manager 4 and CDH 4 reached End of Maintenance (EOM) on August 9, 2015.
- CDH 3 reached End of Maintenance (EOM) on June 20, 2013.

- CDH 4 is at End of Maintenance. No further updates are planned for this release.
- CDH 3 is at End of Maintenance. No further updates are planned for this release.
- CDH 2 is at End of Maintenance. No further updates are planned for this release.
- CDH 1 is at End of Maintenance. No further updates are planned for this release.

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH Download Information

These topics describe download information for CDH 5.

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.16.x Download Information

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

The section describes download information for CDH 5.16.x releases. For a different release, see .

CDH 5.14.x Download Information

The section describes download information for CDH 5.14.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.10.x Download Information

The section describes download information for CDH 5.10.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.10.2

Release Date: June 30, 2017 **Status:** Production

Repository Type	Location	Repo file
Yum RHEL/CentOS/Oracle 7	<code>https:// username:password@archive.cloudera.com/ p/cdh5/redhat/7/x86_64/ cdh/5.10.2/</code>	<code>https:// username:password@archive.cloudera.com/ p/cdh5/redhat/7/x86_64/ cdh/cloudera-cdh5.repo</code>

CDH 5.8.x Download Information

The section describes download information for CDH 5.8.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.8.5

Release Date: May 2017 Status: Production

CDH 5.7.x Download Information

The section describes download information for CDH 5.7.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.4.x Download Information

The section describes download information for CDH 5.4.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.3.x Download Information

The section describes download information for CDH 5.3.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.2.x Download Information

The section describes download information for CDH 5.2.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5.1.x Download Information

The section describes download information for CDH 5.1.x releases. For a different release, see .

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

CDH 5 Packaging and Tarball Information

Each CDH release series is made up of a collection of CDH project packages that are known to work together. The package version numbers of the CDH projects in each CDH release are listed in the following table.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

Important: As of February 1, 2021, all downloads of CDH and Cloudera Manager require a username and password and use a modified URL. You must use the modified URL, including the username and password when downloading the repository contents described below. You may need to upgrade Cloudera Manager to a newer version that uses the modified URLs.

This can affect new installations, upgrades, adding new hosts to a cluster, adding a cluster and adding new services to a cluster.

For more information, see [Updating an existing CDH/Cloudera Manager deployment to access downloads with authentication](#) on page 99.

Examples of Versions

Cloudera packages are designed to be transparent and easy to customize. CDH 5 packages are labeled using the following format:

```
component-base_version+cdh_version+patch_level
```

where,

- `component-base_version` is the version of the open-source component included in the CDH package
- `cdh_version` is the version of the CDH package
- `patch_level` is the number of source commits applied on top of the base version forked from the Apache Hadoop branch. The list of source commits includes all backports and all non-functional changes such as CDH packaging and branding commits. Note that the number of commits does not indicate the number of functional changes or bug fixes in the release. For example, a commit may be used to amend a version number or make other non-functional changes. The list of actual patches that will match the count is found inside the CDH tarball's `../cloudera/patches/` directory. All of the source commits Cloudera has applied is also available in source form in that directory.

For example:

Package	Component	Branch	Base Version	CDH Version	Patch Level
hadoop-2.3.0 +cdh5.1.0+795	hadoop	2.3	2.3.0	5.1.0	795
hue-3.6.0+cdh5.1.0+86	hue	3.6	3.6.0	5.1.0	86
parquet-1.2.5 +cdh5.1.0+130	parquet	1.2	1.2.5	5.1.0	130

CDH Package Manifests

Both the CDH patched source and packages contain explicit information about Cloudera modifications. For example, in the patched source there is a top-level `cloudera` directory with:

- A `CHANGES.cloudera.txt` file that lists all the changes to the pristine source
- A `patches` directory that contains every patch Cloudera has applied to the pristine source. All Cloudera patches are released with an Apache 2.0 license.
- A `files` directory for files Cloudera created from scratch, such as man pages and configuration files. All Cloudera files are released with an Apache 2.0 license.
- A `README.cloudera` file that explains explicitly how to recreate the patches source from the pristine source.

Build and Release Numbering

If you are installing CDH 5 with a package manager, you will also see build and release information as part of the file name. The build and package release fields follow the patch level: for example,

```
hbase-0.98.1+cdh5.1.0+64-1.cdh5.1.0.p0.34.el6.x86_64.rpm. The suffix
```

`-1.cdh5.1.0.p0.34.el6.x86_64` represents:

- the base of the release field (1)
- the CDH release (`cdh5.1.0`)
- the customer patch identifier (`p0` — which will be 0 for all regular CDH releases but will increment for customer patches)
- the build number (34)
- the distribution (`el6` = RHEL/CentOs 6, `el5` = RHEL/Centos 5, `sles11` = SLES 11)
- the processor architecture (`x86_64`, `noarch`, `i386`, `amd64`). `noarch` means the packages are not architecture-specific.

External Documentation

Cloudera provides documentation for CDH as a whole, whether your CDH cluster is managed by Cloudera Manager or not. In addition, you may find it useful to refer to documentation for the individual components included in CDH. Where

Version and Download Information

possible, these links point to the main documentation for a project, in the Cloudera release archive. This ensures that you are looking at the correct documentation for the version of a project included in CDH. Otherwise, the links may point to the project's main site.

CDH 5.16.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.16.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.16.2 Packaging and Tarballs

Component	Package Version	Tarball	Release Notes	Changes File

CDH 5.15.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.15.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.14.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.14.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.13.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.13.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.13.3 Packaging and Tarballs

CDH 5.12.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.12.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.11.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.11.0 release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.10.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.10.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.9.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.9.x release are listed in the following tables. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.8.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.8.x release are listed in the following table. For the same type of information for other CDH releases, see [CDH 5 Packaging and Tarball Information](#) on page 230. To view the overall release notes for CDH 5.x.x, see the [CDH 5 Release Notes](#) on page 1812.

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.7.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.7.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.7.6 Packaging and Tarballs

Component	Package Version	Tarball	Release Notes	Changes File
Apache Avro	avro-1.7.6+cdh5.7.6+119	https://archive.apache.org/dist/avro/1.7.6/avro-1.7.6-cdh5.7.6.tar.gz	https://archive.apache.org/dist/avro/1.7.6/avro-1.7.6-cdh5.7.6-releasenotes.html	https://archive.apache.org/dist/avro/1.7.6/avro-1.7.6-cdh5.7.6-changes.txt

CDH 5.6.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.6.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.5.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.5.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.4.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.4.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.3.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.3.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.2.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.2.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.1.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.1.x release are listed in the following table. For

Version and Download Information

the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

CDH 5.1.2 Packaging and Tarballs

Note:

There is no CDH 5.1.1 release. This skip in the CDH 5.x sequence allows the CDH and Cloudera Manager components of Cloudera Enterprise 5.1.2 to have consistent numbering.

CDH 5.0.x Packaging and Tarball Information

The package version numbers of the projects comprising each CDH 5.0.x release are listed in the following table. For the same type of information for other CDH releases, see [Packaging and Tarballs](#). To view the overall release notes for CDH 5.x.x, see the [Release Notes](#).

Important: When installing CDH from Cloudera tarballs, note that certain features of Hadoop have not been included in the tarballs and will only be available if you have the native libraries present.

To see the details of all the changes and bug-fixes for a given component in a given release, make sure you read the Changes file as well as the Release Notes, following the links in the tables below.

Using the CDH 5 Maven Repository

If you want to build applications or tools for use with CDH 5 components and you are using Maven or Ivy for dependency management, you can pull the CDH 5 artifacts from the Cloudera Maven repository. The repository is available at <https://repository.cloudera.com/artifactory/cloudera-repos/>.

Important: When you build an application JAR, *do not* include CDH JARs, because they are already provided. If you do, upgrading CDH can break your application. To avoid this situation, set the Maven dependency scope to `provided`. If you have already built applications which include the CDH JARs, update the dependency to set scope to `provided` and recompile.

Important: If your cluster hosts are running CDH 5.16.x and the Ubuntu 16.04 or Debian 9 operating system and you are using the OpenJDK SDK to compile applications, note the following:

The following OpenJDK versions will cause the Maven Surefire plug-in to fail:

- Ubuntu 16.04: 8u181-b13-1ubuntu0.16.04.1
- Debian 9: 8u181-b13-2~deb9u1

with the following error message:

```
Error: Could not find or load main class
org.apache.maven.surefire.booter.ForkedBooter
```

Cloudera recommends that you use an earlier version of OpenJDK to compile your applications.

For more information, see the following bug reports:

- Debian: <https://bugs.debian.org/cgi-bin/bugreport.cgi?bug=911925>
- Ubuntu: <https://bugs.launchpad.net/ubuntu/+source/openjdk-8/+bug/1800792>

The following is a sample POM (`pom.xml`) file:

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/maven-v4_0_0.xsd">
  <repositories>
    <repository>
      <id>cloudera</id>
      <url>https://repository.cloudera.com/artifactory/cloudera-repos/</url>
    </repository>
```

```
</repositories>
</project>
```

Managing Hadoop API Dependencies in CDH 5

In CDH 3, all of the Hadoop API implementations were confined to a single JAR file (`hadoop-core`) plus a few of its dependencies. It was relatively straightforward to make sure that classes from these JAR files were available at runtime.

CDH 4 and CDH 5 are more complex: they bundle both MRv1 and MRv2 (YARN). To simplify things, CDH 4 and CDH 5 provide a Maven-based way of managing client-side Hadoop API dependencies that saves you from having to figure out the exact names and locations of all the JAR files needed to provide Hadoop APIs.

In CDH 5, Cloudera recommends that you use a `hadoop-client` artifact for all clients, instead of managing JAR-file-based dependencies manually.

Important: When you build an application JAR, *do not* include CDH JARs, because they are already provided. If you do, upgrading CDH can break your application. To avoid this situation, set the Maven dependency `scope` to `provided`. If you have already built applications which include the CDH JARs, update the dependency to set `scope` to `provided` and recompile.

Flavors of the `hadoop-client` Artifact

There are two different flavors of the `hadoop-client` artifact: a Maven-based Project Object Model (POM) artifact and a Linux package, `hadoop-client`. The former lets you manage Hadoop API dependencies at both compile and run time for your Maven- or Ivy-based projects; the latter provides a familiar interface in the form of a collection of JAR files that can be added to your classpath directly.

Versions of the `hadoop-client` Artifact

CDH 5 provides two distinct versions of the `hadoop-client` artifact: one for MRv1 and one for MRv2 (YARN). If you're using the Maven-based POM `hadoop-client` artifact, you can use the version string to distinguish between them:

Table 42: CDH Version Strings for Maven

CDH Version	MRv1 Version String	YARN Version String
5.0.0 - 5.1.x	2.3.0-mr1-cdh5.x.x	2.3.0-cdh5.x.x
5.2.0 - 5.3.x	2.5.0-mr1-cdh5.x.x	2.5.0-cdh5.x.x
5.4.0 and higher	2.6.0-mr1-cdh5.x.x	2.6.0-cdh5.x.x

Replace `5.x.x` with the CDH version number. If you're using the Linux package, you can distinguish by the location of the JAR files: `/usr/lib/hadoop/client-0.20` for MRv1 APIs and `/usr/lib/hadoop/client` for YARN.

Important:

Make sure that one and only one version of the `hadoop-client` artifact is available to your project. Mixing MRv1 and YARN `hadoop-client` artifacts in the same application could lead to failures that are hard to debug.

Using `hadoop-client` for Maven-based Java Projects

Make sure you add the following dependency specification to your `pom.xml` file:

```
<dependency>
  <groupId>org.apache.hadoop</groupId>
  <artifactId>hadoop-client</artifactId>
  <version>VERSION</version>
  <scope>provided</scope>
</dependency>
```

Version and Download Information

See [Table 42: CDH Version Strings for Maven](#) on page 539 for the `VERSION` string.

Using hadoop-client for Ivy-based Java Projects

Make sure you add the following dependency specification to your `ivy.xml` file:

```
<dependency org="org.apache.hadoop" name="hadoop-client" rev="VERSION"
conf="default->provided"/>
```

where the `<VERSION>` string can be either `2.2.0-cdh5.x.x` for YARN APIs or `2.2.0-mr1-cdh5.x.x` for MRv1 APIs, substituting `x` for the version number.

Using JAR Files Provided in the hadoop-client Package

Make sure you add to your project all of the JAR files provided under `/usr/lib/hadoop/client-0.20` (for MRv1 APIs) or `/usr/lib/hadoop/client` (for YARN).

For example, you can add this location to the JVM classpath:

```
$ export CLASSPATH=/usr/lib/hadoop/client-0.20/*
```

Maven Artifacts for CDH 5.16.x Releases

Important: If your cluster hosts are running CDH 5.16.x and the Ubuntu 16.04 or Debian 9 operating system and you are using the OpenJDK SDK to compile applications, note the following:

The following OpenJDK versions will cause the Maven Surefire plug-in to fail:

- Ubuntu 16.04: 8u181-b13-1ubuntu0.16.04.1
- Debian 9: 8u181-b13-2~deb9u1

with the following error message:

```
Error: Could not find or load main class
org.apache.maven.surefire.booter.ForkedBooter
```

Cloudera recommends that you use an earlier version of OpenJDK to compile your applications.

For more information, see the following bug reports:

- Debian: <https://bugs.debian.org/cgi-bin/bugreport.cgi?bug=911925>
- Ubuntu: <https://bugs.launchpad.net/ubuntu/+source/openjdk-8/+bug/1800792>

CDH 5.16.2

The following table lists the project name, groupId, artifactId, and version required to access each CDH artifact.

Project	groupId	artifactId	version
Apache Avro	org.apache.avro	avro	1.7.6-cdh5.16.2
